### 2017 Texas WIC Nutrition Education Survey

#### **Public Health Service Region 2 Report**

(PHR 2 includes LA 021, 022, 034, 074 and parts of LA 056 and 076)

June 2017

### **Summary**

### **Purpose**

The Texas WIC Nutrition Education Participant Survey, administered every two years, provides the state and local agencies with information about their clients to help agencies plan their nutrition offerings and assess client satisfaction with the WIC program services. The Participant Survey also provides support for WIC initiatives at the state level and descriptive data that is used to inform subsequent quantitative surveys and qualitative interviews. This report summarizes the data collected from Public Health Service Region (PHR 2) in Texas. PHR 2 includes LA 021, 022, 034, 074 and parts of LA 056 and 076.

#### Methods

Data were collected from a convenience sample of current WIC participants across the state of Texas. Surveys were available in English or in Spanish during the month of February 2017. Clients could take the survey online for class credit or in the clinic on paper. PHR 2 data represent viewpoints of 20 clients who completed the online survey and 218 clients who answered the paper Scantron survey while at their WIC clinic. The survey contained five sections: opinions about WIC services, family meals and activities, WIC shopping experience, technology usage, and demographics.

#### Results

#### Demographics

Over 81 percent of PHR 2 survey respondents reported speaking English as their main language. Most PHR 2 respondents had been on WIC three or more years, were white (race) and non-Hispanic (ethnicity), and had a high school diploma or GED. Seventy five percent or more mothers had a child over 1 year old.

Opinions about WIC

The three most important WIC services as rated by WIC participants were food benefits, followed by nutrition information, and support received from WIC staff. Internet (web lessons), family-based classes, and nutrition or health fairs were the most valued forms of nutrition education reported by WIC participants on the online survey; however, physical activity and nutrition/health fairs, and self-paced session were most valuable to in clinic survey respondents.

Among the state agency's newly proposed ideas for nutrition education, child-friendly playtime and fitness classes came in at the top of the list. The majority of participants agreed WIC offered classes in their language; however, 10 to 20 percent reported that the WIC clinics did not offer classes at times when they can attend, and 10 to 15 percent reported the WIC clinics did not provide a choice of class topics.

Respondents gave the WIC clinic and the staff high marks (97% or greater in favor) for being friendly, welcoming, clean, relevant, and able to answer questions. Ninety-nine percent responded they would come back to WIC in the future and would recommend WIC to a friend. The area most in need of improvement was "having things for my child to do while waiting."

The top two challenges in the WIC process as rated by WIC participants were shopping for WIC foods and customer service at the grocery store.

### Activities and Family Behaviors

Participants were asked to mark how often the following behaviors were true for them or for their family. The percentage selecting "almost always" is indicated below.

- Mealtime with my family is enjoyable. (85 to 90 percent)
- I prepare meals at home. (85 to 90 percent)
- My family sits down to eat meals together. (75 to 78 percent)
- I serve a fruit or vegetable at each meal. (64 to 85 percent)
- My child sees me as being physically active. (59 to 65 percent)
- I participate in physical activities with my child. (68 to 70 percent)
- My child helps prepare meals at home. (25 to 41 percent)

More than 60 percent of respondents said they were very likely to use WIC online tools if made available, including: short cooking videos, recipes, menu

planning, and videos with experts talking about common child nutrition topics.

### WIC Shopping Experience

WIC participants reported that they would prefer to learn about changes in WIC foods (1) in the WIC approved foods guide, (2) to have staff go over the changes with them at the clinic, or (3) to learn about the changes via an online class. Take home DVD and store tour were rated in the bottom six methods of hearing about new foods.

Respondents also rated their main reasons for choosing one store over another to shop for WIC foods and the top challenges faced when shopping for WIC foods. Over 91 percent of WIC participants stated it was "very important" to them that the store they shop at has WIC foods clearly labeled and easy to find, the store has better quality fruits and vegetables, and the store has a good variety of food choices available for WIC. The number one reason participants have decided not to purchase a WIC food was confusion about brands or what foods are allowed (over 57% of WIC participants have experienced this issue). In addition, while shopping for WIC foods, 67 to 70 percent of WIC participants stated that they selected the wrong item and were sent back for a different one at the checkout line at least once in the last 3 months.

### Technology Usage

WIC participants are using their cell phones more than any other device (i.e. computers, tablets, etc) to access the Internet, although online respondents also use their desktop computers; 87-100 percent have smartphones. The majority reported using text messaging and social media every day. While the majority of WIC participants do not use nutrition and health videos or online menu planning tools weekly, over 60 percent stated they use online recipes weekly followed by short cooking videos (35 to 41 percent using weekly).

YourTexasBenefits.com, TexasWIC.org, and BabyCenter.com were among the most popular websites visited by WIC participants.

Text message WIC appointment reminders, a phone app to help them locate WIC-approved foods, and scheduling WIC appointments online were the top three service enhancements of interest to that WIC participants, followed by

text or e-mailing nutrition and infant feeding tips or text or e-mail dialogue with a WIC nutritionist or peer counselor. It was also interesting to note that 60 percent stated they would like to connect with WIC on Facebook which is higher than the state interest overall.

For more detailed information on the survey responses, please proceed through the summary tables in this report.

Local Agency (LA) and Corresponding Public Health Service Region (PHR)

<sup>\*, \*\*, \*\*\*</sup> On the paper in clinic survey, participants chose either text, e-mail, or neither, but could not mark both text and e-mail. This was edited in the online survey where participants could select they wanted text, email, both, or neither for the items. Text message was preferable over email (if respondent had to pick one or the other) for appointment reminders, tips, and questions.
