

Texas Vendor Drug Program
Makena Authorization Request (Fee for Service Medicaid)

About

Makena® (hydroxyprogesterone caproate injection) is approved in women to reduce the risk of preterm birth in women with a history of spontaneous singleton preterm birth. Makena is a once a week treatment administered by a health care provider.

Approval Criteria

- Diagnosis of singleton pregnancy in a woman with a history of spontaneous singleton preterm birth
- Dosage of 250 mg intramuscularly or 275 mg subcutaneously once weekly
- Age 16 or older
- Starting treatment between 16 weeks, 0 days, and 20 weeks, 6 days of gestation. Continue until 36 weeks, 6 days of gestation or delivery, whichever occurs first.
- Maximum of 21 doses.
- Preferred Products
 - Request for products other than a preferred product may require additional justification. Please refer to the VDP Preferred Drug List at: txvendordrug.com/formulary/prior-authorization/preferred-drugs.

Denial Criteria

- Length of treatment greater than 21 weeks and 0 days
- Contraindications:
 - Current or history of thrombosis or thromboembolic disorders
 - known or suspected breast cancer, other hormone-sensitive cancer, or history of these conditions
 - Undiagnosed abnormal vaginal bleeding unrelated to pregnancy
 - Cholestatic jaundice of pregnancy
 - Liver tumors, benign or malignant, or active liver disease
 - Uncontrolled hypertension
 - Allergic reaction to any ingredients in Makena
 - Ingredients: hydroxyprogesterone, castor oil, benzyl benzoate and benzyl alcohol
- Unapproved Indications:
 - Amenorrhea
 - Endometrial carcinoma
 - Multifetal gestation
 - Short cervix without a history of a preterm birth
 - Testing for endogenous estrogen production

Approval prior to 16 weeks gestation

Makena requests may be submitted for approval just prior to 16 weeks, 0 days gestation to allow time for the prior authorization approval process and shipping from the pharmacy.
