Provider: UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

Intervention(s): This project targets patients at high risk of disconnect from institutionalized health care; specifically, patients that entered Memorial Hermann Hospital-TMC through the emergency department (ED). Care navigators will support these patients to navigate through the continuum of health care services, ensuring that patients receive coordinated, timely, and site-appropriate health care services.

Need for the project: Our region has high rates of inappropriate use of the ED and there is a lack of patient navigation, patient and family education and information programs. Frequent ED users do so for various reasons that often include inability to afford care, lack of knowledge on how to navigate the health care system, poor access to good quality primary care, and so on. Care navigators can help patients and their families navigate the fragmented maze of doctors’ offices, clinics, hospitals, out-patient centers, payment systems, support organizations and other components of the healthcare system.

Target Population: In-Patient admissions at Memorial Hermann Hospital-TMC without a primary care physician.

Category 1 or 2 expected patient benefits:
Based on the capacity we will be providing for navigation services, we estimate that there will be over 12,480 patient encounters made by the navigators each year, for a total of over 37,000 patient encounters by DY5, with at least 6,900 of these patients on Medicaid. By getting patients connected with a primary care provider who can assist them in managing their health, we expect better health outcomes and fewer hospitalizations.

Category 3 outcomes:
IT-3.9: Our goal is to reduce the percentage of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission.
Project Option 2.9.1 – Establish/Expand a Patient Care Navigation Program: UTHealth
Regional Patient Navigation

**Unique RHP Project Identification Number:** 111810101.2.3
**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Project Description:** 2.9 Establish/Expand a Patient Care Navigation Program: (Option 2.9.1)

A patient care navigation program will be designed and implemented within Memorial Hermann Hospital-TMC. The program will target patients at high risk of disconnect from institutionalized health care. Specifically, patients admitted to Memorial Hermann Hospital-TMC who do not have a primary care provider. Care navigators - community health workers (CHWs) - recruited and trained to deliver culturally competent care will work with UT Health Hospitalists to assist the patients in linking up with a primary care providers within UT Health medical homes and other appropriate sources of primary care. The patient navigators will help and support these patients in receiving continuity of care, ensuring that patients receive coordinated, timely, and site-appropriate health care services, by assisting in connecting patients to primary care physicians and/or medical home sites. This will complement the ED navigation program at Memorial Hermann Hospital-TMC, by ensuring that patients receive appropriate navigations services regardless of the type of encounter with hospital services.

Finally, through project MS1 (UT Health Regional Systems Engineering Center and UT Health Quality Improvement Dashboard Development Center), the systems engineering and QI teams at UT Health will identify QI targets and methods needed to achieve continuous quality improvement for this project, especially as it relates to identifying challenges for expansion, and building on lessons learned.

**Goal and Relationship to Regional Goals:**

**Project Goal:**

Help and support patients especially in need of coordinated care navigate through the continuum of health care services so that patients can receive coordinated, timely services when needed with smooth transitions between health care settings.

This project addresses the following regional goal:

The care navigation project will make it easier for patients to access the right care in the right place, thereby attaining the regional goal to "transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services..."

**Challenges:**

- **Need:** 1) High rates of inappropriate emergency department utilization. 2) Lack of patient navigation, patient and family education and information programs.
- **Implementation:** 1) Access to Memorial Hermann Hospital ED data. 2) Recruitment and retention of care navigators.
UT Physicians have had good working relationship with the Memorial Hermann Hospital System and this project will enable further collaboration to tackle one of the greatest challenges of the US health care system - inappropriate emergency department use.

5-Year Expected Outcome for Provider and Patients:

We expect to achieve increased uptake of primary care services by people who tend to rely on the ED for their health care needs. In addition to benefiting the current Medicaid (23% as of 2011, or 65,302 patient visits) and low-income client base of UTP clinics, this project will specifically target patients at high risk of disconnect from institutionalized health care that enter the healthcare system via the Memorial Hermann Hospital ED. These patients are typically indigent individuals (Medicaid, or Medicaid-eligible) who need additional assistance in maintaining their health via ambulatory care settings. While we expect to see improved outcomes for these patients in a number of conditions, we will be measuring 30 day readmission rates for discharges with an index COPD admission.

We will be providing navigation services for patients without a primary care provider who are admitted to Memorial Hermann Hospital-TMC. Based on the capacity we will be providing for navigation services, we estimate that there will be over 12,480 patient encounters made by the navigators each year, for a total of over 37,000 patient encounters by DY5. Using a very conservative estimate, we expect at least 6,900 of these patients will be Medicaid, or Medicaid eligible.

Starting Point/Baseline:

This is a new program. The baseline for the number of patients without a primary care provider admitted to Memorial Hermann Hospital-TMC will be established during DY2. Targets are estimated based upon the capacity we will be providing for navigation services.

Rationale:

Our region has high rates of inappropriate use of the ED and potentially preventable re-admissions. Often this is because patients lack the knowledge on how to navigate the health care system, have poor access to good quality primary care, and so on. Care navigators can help patients and their families navigate the fragmented maze of doctors’ offices, clinics, hospitals, out-patient centers, payment systems, support organizations and other components of the healthcare system. There are different kinds of services that could be offered by navigators and this may include: setting up contacts with primary care, facilitating communication among patients, family members and healthcare providers, coordinating care among providers, arranging financial support and assisting with paperwork, and facilitating follow-up appointments.

Community health workers have close ties to the local community and serve as important links between underserved communities and the healthcare system, hence they will amke excellent care navigators. They also possess the linguistic and cultural skills needed to connect with patients from underserved communities.

Project Components:

Through the UTHealth Regional Patient Navigation Program, we propose to meet all required project components listed below.
a) UTP will work with Memorial Hermann Hospital (MHH) and the UT School of Public Health to conduct a needs assessment to identify the patient population(s) to be targeted with the Patient Navigator program (frequent ED users, including those at risk of disconnect from institutionalized ambulatory care). Those patient population(s) identified will be targeted for our preventable ED reduction program using trained health care navigators.

b) UTP will work with MHH to establish a health care navigation program to provide support to patient populations who are most at risk of receiving disconnected and fragmented care.

c) UTP and MHH will collaborate to provide appropriate training for navigators, which will include case managers/workers, community health workers, and other types of health professionals.

d) Navigators will be deployed to connect patients to primary and preventive care in the UT Physicians medical homes, or the Memorial Hermann Medical Group’s pediatric practices (staffed and managed by UT Physicians) to increase access to care management, including education in chronic disease self-management.

e) UTP’s quality improvement office will conduct QI for each of the clinics providing specialty care using methods such as rapid cycle improvement.

Milestones and Metrics:

For the UTHealth Regional Patient Navigation Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

Process Milestones and Metrics:

**Milestone 1 [P-1.]:** Conduct a needs assessment to identify the patient population(s) to be targeted with the Patient Navigator program.

Metric 1 [P-1.1.]: Provide report identifying the following:

- Targeted patient population characteristics (e.g., patients with no PCP or medical home, frequent ED utilization, homelessness, insurance status, low health literacy).
- Gaps in services and service needs.
- How program will identify, triage and manage target population (i.e. Policies and procedures, referral and navigation protocols/algorithms, service maps or flowcharts).
- Ideal number of patients targeted for enrollment in the patient navigation program
- Number of Patient Navigators needed to be hired
- Available site, state, county and clinical data including flow patients, cases in a given year by race and ethnicity, number of cases lost to follow-up that required medical treatment, percentage of monolingual patients

**Milestone 2 [P-X1]:** Establish a baseline

Metric 1 [P-X1.1.]: Establish a baseline for the average number of patients admitted to Memorial Hermann Hospital-TMC that do not have a primary care provider.

**Milestone 3 [P-X2]:** Complete a planning process/submit a plan in order to do appropriate planning for the implementation of major infrastructure development or program/process redesign
Metric 1 [P-X2.1.]: Complete an implementation plan and protocols to ensure that patients admitted to Memorial Hermann Hospital-TMC without a primary care provider are provided with navigation services and given an appointment before leaving the hospital.

**Milestone 4 [P-2.]:** Expand a health care navigation program to provide support to patient populations who are most at risk of receiving disconnected and fragmented care including program to train the navigators, develop procedures and establish continuing navigator education.

Metric 1 [P-2.1.]: Number of people trained as patient navigators, number of navigation procedures, or number of continuing education sessions for patient navigators.

**Milestone 5 [P-8.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-8.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 7 [P-3.]:** Provide care management/navigation services to targeted patients.

Metric 1 [P-3.1.]: Increase in the number or percent of targeted patients enrolled in the Program.

**Milestone 8 [P-8.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-8.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 10 [P-5.]:** Execution of evaluation process for project innovation.

Metric 1 [P-5.1.]: Document evaluative process, tools and analytics.

**Milestone 11 [P-8.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-8.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Improvement Milestones and Metrics:**

**Milestone 6 [I-6.]:** Increase number of PCP referrals for patients without a medical home who use hospital services.

Metric 1 [I-6.4.]: Percent of patients without a primary care provider who are given a scheduled primary care provider appointment (DY3).

**Milestone 9 [I-6.]:** Increase number of PCP referrals for patients without a medical home who use the ED, urgent care, and/or hospital services.

Metric 1 [I-6.4.]: Percent of patients without a primary care provider who are given a scheduled primary care provider appointment (DY4).

**Milestone 12 [I-6.]:** Increase number of PCP referrals for patients without a medical home who use the ED, urgent care, and/or hospital services.

Metric 1 [I-6.4.]: Percent of patients without a primary care provider who are given a scheduled primary care provider appointment (DY5).

**Unique community need identification numbers the project addresses:**
This project addresses community needs CN.8 (High rates of inappropriate emergency department utilization) and CN.23 (Lack of patient navigation, patient and family education and information programs).

**How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:**
This project represents a new initiative. This program does not currently exist in the UT Physicians and Memorial Hermann Hospital-TMC system. This project proposes to target patients at high risk of disconnect from institutionalized health care with an intervention for getting them into primary care settings, where they can receive regularized care and avoid the need for episodic acute care.

**Related Category 3 Outcome Measure(s):**
OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs )
- IT-3.9 Chronic Obstructive Pulmonary Disease 30 day readmission rate (Standalone measure)

Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of COPD and with a complete claims history for the 12 months prior to admission.

**Relationship to other Projects:**
1.1 (C3) - Expanded primary care services will ensure there is reserve capacity to handle the increased demand anticipated by the successful diversion of nonurgent care from the Emergency Department to primary care settings.
1.2 (A2, SPH1) - The SPH1 project will ensure their is sufficient supply of CHWs to serve as care navigators and the training received by residents (A2) will help the physicians understand how to integrate CHWs as members of the health care team.
1.3 (C12) - The disease management registry will enable the identification of patients who default from care so that they can be actively sought and brought into compliance, which will help to reduce frequent ED use.
1.6 (C11) - Navigators will be a resource available to the nurse triage line to help ensure patients get the right care at the right time and in the right setting.
1.9 (C4) - The expansion of specialty care in the primary care setting will help patient navigators ensure that patients get appropriate specialist input into their care when and where needed.
2.1 (C1-2) - Care navigators will assist frequent ED users in getting enrolled with a primary care team at UT Medical Homes, which will aid in reducing inappropriate ED use.
2.2 (C5-9,CL3) - Getting frequent ED users enrolled in a UT Medical Home, where they can receive guidance and regular evidence-based care for chronic diseases will reduce the need for acute care services being received in the ED.

**Relationship to Other Performing Providers’ Projects in the RHP:**
The ability to properly identify and monitor specific patients with chronic conditions or frequent emergency department utilization trends will allow the region to accurately manage the
Plan for Learning Collaborative:
UTHHealth will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

Project Valuation:
The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria, and the reasons two of the criteria were not used:

1. Transformational Impact (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. Partnership/Collaboration (Weight = 10%): This was not rated, because UTHHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. Sustainability (Weight = 15%): This was also not rated, because UTHHealth does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

Regional Healthcare Partnership Plan  
Region 3  
1549
Project Option 2.10.1- 2.10 Use of Palliative Care Programs: Integrating Palliative Care into Critical Care

**Unique RHP Project ID:** 111810101.2.4  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians / 111810101

**Project Summary:**

Provider: UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

**Intervention(s):** Patients admitted to any adult ICU at Memorial Herman Hospital-TMC who are at high risk of death in or soon after hospitalization will receive a palliative care consultation to supplement their clinical therapy and assist in determination of goals of care which may include transitioning the patients from acute hospital care into home care, hospice or a skilled nursing facility.

**Need for the project:** While end-of-life care was once associated almost exclusively with terminal cancer, today there is need for end-of-life care for a number of other conditions, such as congestive heart failure. In addition to providing improved care and comfort for dying patients and their families, palliative care programs have been shown to provide considerable cost savings.

**Target Population:** Patients admitted to any adult ICU at Memorial Herman Hospital-TMC who are at high risk of death in or soon after hospitalization.

**Category 1 or 2 expected patient benefits:**
Increased uptake of palliative care services, greater involvement of patients and/or their families in end-of-life decisions, and increased satisfaction with end-of-life care. Palliative care services will be available to the Medicaid and Medicaid-eligible populations receiving care at Memorial Hermann Hospital that meet the intervention criteria. With this project, we will have the capacity to deliver approximately **9,288** additional palliative care consults and accomplish an additional **4,848** transitions by the end of DY5.

**Category 3 outcomes:**
Our goals are to increase the number of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter (IT-13.1), increase the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments (IT-13.2), and to increase the percentage of patients receiving hospice or palliative care services with documentation in the clinical record of a
discussion of spiritual/religions concerns or documentation that the patient/caregiver did not want to discuss (IT-13.5).
Project Option 2.10.1 – Use of Palliative Care Programs: Integrating Palliative Care into Critical Care

**Unique RHP Project Identification Number:** 111810101.2.4  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Project Description:** 2.10 Use of Palliative Care Programs (Option 2.10.1)

The project will entail identifying patients admitted to any adult ICU at Memorial Herman Hospital-TMC who are at high risk of death in or soon after hospitalization. Patients will be screened based on meeting one or more of the following criteria: severe life-threatening acute illness, progressive terminal illness, significant exacerbation of chronic debilitating illness, or declining quality of life and independent functioning in the past 6 months. In collaboration with the primary clinical team, these patients will receive a palliative care consultation to supplement their clinical therapy and assist in determination of goals of care which may include transitioning the patients from acute hospital care into home care, hospice or a skilled nursing facility. Patient/family experience surveys regarding the quality of care, pain and symptom management, and degree of patient/family centeredness in care will also be implemented.

UTHealth will recruit additional physicians trained in palliative care and other team staff to expand the existing palliative care program. The current partnership of UTHealth and Memorial Hermann Hospital-TMC has been a successful program, which is seeing increased demand and needs further expansion. Since the start of the program in 2004, over 1,000 patients have received palliative care related to cancer, heart failure, and various other illnesses, including infants in the NICU. In 2010, palliative care was provided to 84 cancer patients, 467 non-cancer patients, and 25 patients for whom the illness is unknown. In 2011, 203 patients with heart failure (DRGS 291, 292, 293) received palliative care. (Data from the UTHealth Medical School, Geriatric & Palliative Medicine Division, Palliative Fact Sheet August 2012.)

Finally, through project MS1 (UT Health Regional Systems Engineering Center and UT Health Quality Improvement Dashboard Development Center), the systems engineering and QI teams at UT Health will identify QI targets and methods needed to achieve continuous quality improvement for this project, especially as it relates to identifying challenges for expansion, and building on lessons learned.

**Goal and Relationship to Regional Goals:**

**Project Goal:**

Patients receive dignified and culturally appropriate end-of-life care, which is provided for patients with terminal illnesses in a manner that prioritizes pain control, social and spiritual care, and patient/family preferences.

**This project addresses the following regional goal:**

One of the goals of the region is "to develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction". The palliative care project when successfully implemented will make the health system better suited to attend to patients' needs at the end-of-life thereby increasing satisfaction.
Challenges:
Need: 1) Education and information about the dying process and the various options for care. 2) Support and navigation in acting upon their preferences for care.
Implementation: 1) Staff recruitment and retention. 2) Willingness of patients, or their families, to embrace palliative care.

The project will mitigate the challenges patients and their families face due to lack of access to information to enable informed end-of-life decisions that are satisfactory. Gradually as the program gets established, the learning process will enable development of best practices in palliative care and increased likelihood of patients to embrace care options.

5-Year Expected Outcome for Provider and Patients:
Increased uptake of palliative care services, greater involvement of patients and/or their families in end-of-life decisions, and increased satisfaction with end-of-life care. These services will be available to the Medicaid and Medicaid-eligible populations receiving care at Memorial Hermann Hospital that meet the intervention criteria. With this project to expand palliative care consults and increase transitions into non-hospital settings, we will have the capacity to deliver approximately 9,288 additional palliative care consults and accomplish an additional 4,848 transitions by the end of DY5. We conservatively estimate that a minimum of 1,300 additional palliative care consults and an additional 679 transitions will have been accomplished for the Medicaid population.

Starting Point/Baseline:
Currently Memorial Hermann Hospital administers a Palliative program for some of their patients. Last year in 2012 they consulted with 1,166 patients and their families. Of those consults, 81% were with the adult population. The program is staffed with two physicians, three specialized nurse personnel (1 being the Director of the program) and an administrative assistant. They also have two volunteer physicians that help when time permits.

Rationale:
While end-of-life care was once associated almost exclusively with terminal cancer, today we are providing end-of-life care for a number of other conditions, such as congestive heart failure and infants and their families in the NICU. Our experience has shown that that palliative and hospice care could be more widely embraced for many dying patients. The goal of palliative medicine is to improve or maintain quality of life in patients with life-limiting or life-threatening diseases. Palliative medicine is a recognized medical subspecialty of both the American Board of Medical Specialties and American Osteopathic Association. Palliative medicine involves the control of symptoms associated with chronic disease such as nausea, pain and shortness of breath for example, as well as management of the symptoms that are part of the dying process. Along with symptom control, palliative medicine teams provide comfort, social and spiritual interventions for patients & their families. Palliative care, unlike hospice, is provided simultaneously with all other appropriate disease-directed treatments (Morrison RS, Meier DE. Clinical practice: palliative care. N Engl J Med. 2004;350(25): 2582-2590). Palliative medicine programs markedly reduce lengths of stay in hospitals on both wards and ICU settings. Data from the 2009 American Hospital Association Annual Survey showed that between 2000 and 2008, the number of hospitals with palliative medicine programs grew by 125.8% from 658 to 1486 (Center for the Advancement of Palliative Care. http://www.capc.org/news-and-

In addition to providing improved care and comfort for dying patients and their families, palliative care programs have been shown to provide considerable cost savings. According to a study of 5,354 subjects conducted by Morrison, et al. (Archives of Internal Medicine, 2008), palliative care teams saved $1,696 in direct costs per admission (P = .004) for patients discharged alive and $4,908 in direct costs per admission (P=.003) for patients who died. For a 400-bed hospital seeing 500 patients a year, this translates into a net savings of $1.3 million per year after adding physician revenues and subtracting personnel costs (Morrison RS, Penrod JD, Cassel JB, et al. Cost savings associated with United States hospital palliative care consultation programs. Arch Intern Med. 2008;168(16): 1783-1790). The palliative medicine service provided by UTHealth at Memorial Hermann Hospital-TMC has seen consistent growth in consult numbers since the program’s inception in 2004. For the 532 patients receiving care in 2008, we saw a median per person per day savings of $5,292 after the palliative care consult (with a reduction in the average length of stay from 9.5 to 2.3 days) and for the 698 patients receiving palliative care consults in 2009, we realized a median per person per day savings of $4,727 (with a reduction in the average length of stay from 8.5 to 2.5 days). (Data from white paper: CBDyer, MD, GVaras, DO, N Walter. Palliative Medicine: A Critical Component of Modern Health Care. April, 2010.)

Project Components:

Through the Integrating Palliative Care into Critical Care Program, we propose to meet all required project components listed below.

a) UTP will develop a business case for palliative care
b) UTP will conduct the necessary planning activities prior to implementing the expanded palliative care program.
c) UTP will recruit additional physicians to provide palliative care at MHH.
d) UT Palliative Care Physicians will deliver palliative care to those patients with terminal illness at MHH and transition patients from acute hospital care into home care, hospice, or a skilled nursing facility wherever possible.
e) UTP will conduct patient/family experience surveys regarding the quality of care, pain and symptom management, and degree of patient/family centeredness in care with the aim to use this information to improve scores over time.
f) UTP’s quality improvement office will conduct QI for each of the clinics providing specialty care using methods such as rapid cycle improvement.
Milestones and Metrics:
For the Integrating Palliative Care into Critical Care Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

Process Milestones and Metrics:

**Milestone 1 [P-1.]:** Develop a hospital-specific business case for palliative care and conduct planning activities necessary as a precursor to implementing a palliative care program
Metric 1 [P-1.1.]: Business case

**Milestone 2 [P-5.]:** Expand a palliative care program
Metric 1 [P-5.1.]: Implement expanded comprehensive palliative care program

**Milestone 3 [P-6.]:** Increase the number of palliative care consults over baseline
Metric 1 [P-6.1.]: Palliative care consults meet targets established by the program

**Milestone 4 [P-11.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.
Metric 1 [P-11.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 7 [P-8.]:** Document the conditions for which palliative care is consulted.
Metric 1 [P-8.1.]: Breadth of conditions for which palliative care is utilized.

Improvement Milestones and Metrics:

**Milestone 5 [I-12.]:** Implement a patient/family experience survey regarding the quality of care, pain and symptom management, and degree of patient/family centeredness in care and improve scores over time
Metric 1 [I-12.1.]: Survey developed and implemented; scores increased over time

**Milestone 6 [I-9.]:** Palliative care patients transitioned from acute hospital care into hospice, home care, or a skilled nursing facility (SNF) with and without hospice services.
Metric 1 [I-9.1.]: Transitions accomplished

**Milestone 8 [I-10.]:** Among patients who died in the hospital, increase the proportion of those who received a palliative care consult.
Metric 1 [I-10.1.]: Percent of total in-hospital deaths who had a palliative care consult.

Unique community need identification numbers the project addresses:
This project addresses community needs CN.7 (Insufficient access to care coordination practice management and integrated care treatment programs) and CN.23 (Lack of patient navigation, patient and family education and information programs).

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project represents an expansion of a currently existing program. This project proposes to expand palliative care services to patients beyond cancer, congestive heart failure, and infants and their families in the NICU, to any patients and their families admitted to any adult ICU.
Related Category 3 Outcome Measure(s):

OD-13 Palliative Care

- IT-13.1 Pain assessment (NQF-1637) (Non-standalone measure)
  Increase the number of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
  Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

OD-13 Palliative Care

- IT-13.2 Treatment Preferences (NQF 1641) (Non-standalone measure)
  Percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.
  Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

OD-13 Palliative Care

- IT-13.5 Percentage of patients receiving hospice or palliative care services with documentation in the clinical record of a discussion of spiritual/religious concerns or documentation that the patient/caregiver did not want to discuss. (NQF 1647 modified) (Non-standalone)
  Increase the number of patients discharged from hospice or palliative care with clinical record documentation of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.

Relationship to other Projects:

1.9 (C4) - The disease management registry will serve as a useful resource to every provider, including palliative care providers, involved in caring for the enrolled patients.
2.11 (C10) - The medication management program will serve as a useful resource to palliative care providers, as they work to help the patient and their family achieve their care goals.

Relationship to Other Performing Providers’ Projects in the RHP:

The regional need for palliative care is that of upmost priority and is addressed in this initiative. This initiative is unique to Pass 1 initiatives and focuses to outcome measures of pain assessments, treatment preferences, and patients receiving hospice and palliative care. The Region 3 Initiative Grid (addendum) can provide a cross reference to all other initiatives.

Plan for Learning Collaborative:

UTH will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.
**Project Valuation:**

The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria and the reasons two of the criteria were not used:

1. **Transformational Impact** (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. **Population Served/Project Size** (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.

3. **Aligned with Community Needs** (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. **Cost Avoidance** (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. **Partnership/Collaboration** (Weight = 10%): *This was not rated*, because UTHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. **Sustainability** (Weight = 15%): *This was also not rated*, because UTHealth does not consider any of the projects to be unsustainable or at the very least do not consider one project less sustainable than another. Giving the projects the same or very similar ratings on these criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

Project Option 2.11.1- 2.11 Conduct Medication Management: Patient-Centered Medication Therapy Management Program

**Unique RHP Project ID:** 111810101.2.5  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians / 111810101

**Project Summary:**

Provider: UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

**Intervention(s):** This project will implement a technologically driven patient-centered medication therapy management program. Allscripts analytics tool will enable staff to identify patients at high risk for developing complications and co-morbidities, and patients that have not refilled their medications. Patients will also have access to the patient portal, which will have detailed information on all their medications. Root cause analysis will be used to identify potential medication errors and quality improvement processes will be used to address the causes.

**Need for the project:** Drug-related morbidity and mortality costs exceed $200 billion annually in the U.S. Patients with multiple chronic conditions are likely to be on multiple medications for long periods of time thereby increasing the risk of medication errors. Considering the high rates of chronic diseases in our region, this project will lead to improved outcomes and cost savings for the health system.

**Target Population:** This project primarily targets patients in our service areas with diabetes, hypertension, asthma, COPD, or CHF. Patients of lower socioeconomic status are known to have worse disease control due to inability to maintain compliance in the long run, hence this project will be beneficial to the Medicaid population. UTP provided 321,716 patient visits in 2012 (20% were Medicaid clients) and expects to add another 80,000 patient visits (most are expected to be Medicaid clients) by the end of FY5, due to the UTP expansion of primary and specialty care services.

**Category 1 or 2 expected patient benefits:**

By implementing this patient medication therapy management program, we expect to provide medication management for at least **9,000** unique patients with Asthma, CHF, COPD, Diabetes, or Hypertension and medication reconciliation for an estimated **150,000** patient visits.

**Category 3 outcomes:**

The percentage of members 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test (IT-1.2); the percentage who received at least 180 treatment days of digoxin and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test (IT-1.3), and the percentage who received at
least 180 treatment days of a diuretic and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year (IT-1.4).
Project Option 2.11.1 – Conduct Medication Management: Patient-Centered Medication Therapy Management Program

**Unique RHP Project Identification Number:** 111810101.2.5  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Project Description:** 2.11 Conduct Medication Management (Option 2.11.1)

UT Physicians will implement a patient-centered medication therapy management program. Using the Allscripts analytics tool, staff will identify patients at high risk for developing complications and adverse effects from possible interactions, or non-compliance. Related patient information in the EMR will be used to review the complete medication regimen and history to assess compliance. Where there is an indication that a patient might not be compliant (Rx wasn’t filled, etc.), or there are other reasons for concern, the appropriate member of the patient’s healthcare team will follow up with the patient. Patients of UTP will receive counseling and education about the medications they are prescribed and an action plan will be developed that includes any further patient education needed, goal setting, and follow up appointments for potential adjustments in the medication regimen. Patient response will then be monitored and adjustments made accordingly. Patients will also have access 24/7 to the Jardogs patient portal, which will have a complete list of all current medications, including dosage information, information on how and why it is being used, and the prescribing physician. Patients will be educated on accessing the patient portal. The patient’s healthcare team continue to work with the patient in resolving any barriers to compliance that could include any number of things. Root cause analysis will be done to identify reoccurring barriers to compliance and potential medication errors, and quality improvement processes will be used to address the causes.

Finally, through project MS1 (UT Health Regional Systems Engineering Center and UT Health Quality Improvement Dashboard Development Center), the systems engineering and QI teams at UT Health will identify QI targets and methods needed to achieve continuous quality improvement for this project, especially as it relates to identifying challenges for expansion, and building on lessons learned.

**Goal and Relationship to Regional Goals:**

**Project Goal:**
To provide information to physicians, care teams, and patients that facilitates the appropriate use of medications in order to control illness and promote health.

This project addresses the following regional goal:
Part of the goals of the region is to develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices; the medication management project ties closely with this aspiration by using technological support to reduce medication errors and improve drug compliance.

**Challenges:**
Need: 1) High rates of chronic disease. 2) High risk of medication errors with polypharmacy.
Implementation: 1) Choosing the parameters that will be used to initiate action. 2) Implementing clinical processes to support proactive care. 3) Patient compliance with medication management efforts.

The medication management project will reduce the risk of medication errors in patients with multiple chronic conditions.

5-Year Expected Outcome for Provider and Patients:
Achievement of reduction in medication errors and drug interactions, resulting in improved adherence to chronic care medication therapy. By adopting a proactive medication therapy management program, potential dangerous interactions and ineffective treatment regimens can be avoided. Patients of UT Physicians, including the current Medicaid (23% as of 2011, or 65,302 patient visits) and low-income client base, will be safer and experience better health outcomes. In FY 2012, UTP provided 321,716 patient visits and expects to add another 80,000 (most of which are expected to be Medicaid clients) by DY5 for over 400,000 patient visits. Using the Harris County rate (14.5%) of Medicaid clients, there are an estimated 1,423,176 Medicaid clients living within our service areas. We expect this program will help ensure these clients will also get the best health outcomes possible from their medication therapies.

By implementing this patient medication therapy management program, we expect to provide medication management for at least 9,000 unique patients with Asthma, CHF, COPD, Diabetes, or Hypertension and medication reconciliation for an estimated 150,000 patient visits.

Starting Point/Baseline:
UT Physicians currently utilizes an electronic health record system called Allscripts. At this time, the only functionality the system has to perform medication therapy management is immediate medication reconciliation. Currently this is not a mandatory step in the staff’s process nor have reports been built to track this process. Allscripts has the ability to perform other functions of medication therapy management but they are not authorized for use at this time. A DY2 report showed that 12,879 unique patients were diagnosed with one of the chronic conditions of Asthma, CHF, COPD, Diabetes and Hypertension.

Rationale:
Patients with chronic diseases and multiple chronic conditions are likely to be on multiple medications for long periods of time thereby increasing the risk of medication errors. Considering the high rates of chronic diseases in our region, this project would potentially lead to improved outcomes and cost savings for the health system.

**Project Components:**

Through the Patient-Centered Medication Therapy Management Program, we propose to meet all the required project components listed below.

a) UTP will develop criteria and identify targeted patient populations (e.g. chronic disease patient populations that are at high risk for developing complications, co-morbidities, and/or utilizing acute and emergency care services) using evidence-based criteria for medication management planning.

b) UTP will develop written medication management plans and tools to provide education and support to those patients at highest risk of non-compliance, an adverse drug event, or medication error.

c) UTP will implement an electronic tracking and alert system using Allscripts. UTP will recruit additional staff where necessary to conduct periodic medication reviews.

d) UTP will conduct root cause analysis of non-compliance, potential medication errors, or adverse drug events and develop/implement processes to address those causes.

e) UTP’s quality improvement office will conduct QI for each of the clinics providing specialty care using methods such as rapid cycle improvement.

**Milestones and Metrics:**

For the Patient-Centered Medication Therapy Management Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

**Process Milestones and Metrics:**

Milestone 1 [P-X1.]: Complete a planning process/submit a plan, in order to do appropriate planning for the implementation of major infrastructure development or program/process redesign

Metric 1 [P-X1.1.]: Implementation plan (eligibility criteria, implementation components, responsibilities, and timeline).

Milestone 2 [P-X2.]: Designate/hire personnel or teams to support and/or manage the project/intervention

Metric 1 [P-X2.1.]: Project managers, personnel assigned to teams, and team responsibilities

Milestone 3 [P-2.]: Develop criteria and identify targeted patient populations

Metric 1 [P-2.1.]: Establish evidence based criteria for medication management planning in target population based on assessment of population needs

Milestone 4 [P-2.]: Develop criteria and identify targeted patient populations

Metric 1 [P-2.2.]: Written medication management plan(s)

Milestone 5 [P-X.]: Establish a baseline, in order to measure improvement over self

Metric 1 [P-X.3.]: Based on established criteria, assess and document estimated number of patients in need of medication management

Milestone 6 [P-1.]: Implement a medication management program
Metric 1 [P-1.1.]: Program elements

Improvement Milestones and Metrics:

Milestone 7 [I-8.]: Identify patients with chronic disease who receive medication management in their discharge instructions appropriate for their chronic disease.

Metric 1 [I-8.1.]: X percent increase of patients with chronic disease who receive appropriate disease specific medication management

Milestone 8 [I-9.]: Manage medications for targeted patients

Metric 1 [I-9.1.]: Increase the number of patients (meeting criteria for chronic condition) contacted or receiving medication management

Milestone 9 [I-13.]: Implement electronic medication reconciliation at the point of care

Metric 1 [I-13.1.]: Increase the number of patients that receive electronic medication reconciliation at the point of care

Unique community need identification numbers the project addresses:

This project addresses community needs CN.11 (High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease).

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project represents a new initiative. UT Physicians have not previously had access to these types of tools and processes for ensuring the safety of their patients receiving medication therapy and for achieving patients goals.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management

• IT-1.2 Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012)219– angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) (Non-standalone measure)

Percentage of members 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

OD-1 Primary Care and Chronic Disease Management

• IT-1.3 Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012)– digoxin (Non- standalone)

Percentage of members 18 years of age and older who received at least 180 treatment days of digoxin during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

OD-1 Primary Care and Chronic Disease Management

• IT-1.4 Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012)– diuretic (Non- standalone measure)

Percentage of members 18 years of age and older who received at least 180 treatment days of a diuretic during the measurement year and had at least one serum potassium and
either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

**Relationship to other Projects:**
1.1 (C3) - The medication management program will be an integral part of the coordinated care provided by the primary care physicians.
1.2 (A2, SPH1) - Structured educational training for health care providers on quality and cost control will entail instruction in medication therapy management for minimizing medication errors.
1.3 (C12) - The disease management registries and the medication management project will complement each other to ensure patients with chronic diseases, especially those with multiple chronic conditions, get optimal care with minimal errors and sustained active follow up.
1.6 (C11) - The medication management program with its technological support will provide the nurses with useful information on patients to inform more efficient triaging.
1.7 (A1) - The medication management project will ensure that patient medications are managed in a coordinated manner even with inputs and prescriptions from specialists at different sites.
1.9 (C4) - The medication management project will serve as a useful resource to every provider involved in managing the enrolled patients, to ensure optimum outcomes.
2.1 (C1-2) - The medication management program will be an integral component of the provision of care within the medical home model.
2.2 (C5-9,CL3) - The medication management program will be an important resource for the provision of chronic disease care using Wagner's model as proposed in these projects.
2.10 (MS3) - The medication management program will be a useful resource for those providing palliative care to reduce the risk of medication errors and in achieving patient goals for care.
2.15 (C13) - The medication management program will be a useful resource for the primary care physicians and the behavioral health physicians providing integrated care.

**Relationship to Other Performing Providers’ Projects in the RHP:**
Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

**Plan for Learning Collaborative:**
UTHealth will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.
**Project Valuation:**

The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria, and the reasons two of the criteria were not used:

1. **Transformational Impact** (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. **Population Served/Project Size** (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.

3. **Aligned with Community Needs** (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. **Cost Avoidance** (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. **Partnership/Collaboration** (Weight = 10%): *This was not rated*, because UTHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. **Sustainability** (Weight = 15%): *This was also not rated*, because UTHealth does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

of patients with Asthma, CHF, COPD, Diabetes, or Hypertension that are receiving medication management and 2) the number of all patients receiving electronic medication reconciliation.

Data Source: Assessment report

Milestone 5 Estimated incentive payment: $612,157
Project Option 2.12.2- 2.12 Implement/Expand Care Transitions Programs: UT Physicians
Transitions of Care

**Unique RHP Project ID:** 111810101.2.6  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians / 111810101

**Project Summary:**

Provider: UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

**Intervention(s):** This project will implement a comprehensive transitions of care program which will ensure that patients have an appointment for follow-up with an appropriate physician(s) prior to leaving the hospital, understand their discharge medications and other instructions, and are followed up post discharge, particularly those at risk of needing acute care services within 30-60 days. This will be implemented with UT Physicians' network of hospitalists with 24/7 management of inpatients with specific medical and surgical conditions.

**Need for the project:** This project addresses several community needs including insufficient access to care coordination practice management and high rates of preventable hospital readmissions. When a patient is discharged without optimal follow-up, it could lead to hospital readmission and possibly death. Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays.

**Target Population:** The care transitions project will be for special populations, namely: cancer surgery patients, patients admitted for DKA, and children/adolescents with type 1 diabetes who are graduating to adult diabetes management.

**Category 1 or 2 expected patient benefits:**
Through this transitions of care project that targets 3 specific groups at high risk for in-patient hospitalization, we expect to have completed evidence-based care transitions processes for approximately 2,000 unique patients, which will help to ensure continuity of care, better health outcomes, and fewer hospitalizations.

**Category 3 outcomes:**
Our goal is to reduce potentially preventable re-admissions (PPRs) for any cause for patients with diabetes (IT-3.3).
Project Option 2.12.2 – Implement/Expand Care Transitions Programs: UT Physicians

Transitions of Care

Unique RHP Project Identification Number: 111810101.2.6
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Project Description: 2.12 Implement/Expand Care Transitions Programs (Option 2.12.2)

There is evidence that care coordination and transitional care can reduce unplanned hospital readmissions, which are an indicator of quality of care and a source of significant wasted hospital resources and expenditures. Care coordination is defined by the Agency for Healthcare Research and Quality (AHRQ) as the "deliberate organization of patient care activities between two or more participants (including the patients) involved in a patient's care to facilitate the appropriate delivery of health care services."( McDonald KM, Sundaram V, Bravata DM, et al. Care Coordination. Vol 7 of: Shojania KG, McDonald KM, Wachter RM, Owens DK, editors. Closing the Quality Gap: A Critical Analysis of Quality Improvement Strategies. Technical Review 9 (Prepared by the Stanford University-UCSF Evidence-based Practice Center under contract 290-02-0017). AHRQ Publication No. 04-(07)-0051-7. In. Rockville, MD: Agency for Healthcare Research and Quality; June 2007.) Transitional care, which is complementary to care coordination, is "a broad range of time-limited services designed to ensure health care continuity, avoid preventable poor outcomes among at-risk populations, and promote the safe and timely transfer of patients from one level of care to another or from one type of setting to another."

(Naylor MD, Aiken LH, Kurtzman ET, Olds DM, Hirschman KB. The care span: The importance of transitional care in achieving health reform. Health Aff (Millwood) 2011;30:746-54.)

UT Health proposes to implement a comprehensive transitions of care program. UT Physicians will implement a discharge planning program and post discharge support program that ensures that patients have an appointment for follow-up with an appropriate physician(s) prior to leaving the hospital, understand their discharge medications and other instructions, and are followed up post discharge, particularly those at risk of needing acute care services within 30-60 days. This will be implemented with UT Physicians' network of hospitalists with 24/7 management of inpatients with medical and surgical conditions. Additionally, we have planned specific transitions of care interventions for certain special populations.

Successful care coordination and transitional care programs have traditionally been implemented for medical rather than surgical patients and in settings where patients have ready access to primary care providers. Cancer care and outcomes are worst among racial/ethnic minorities and uninsured patients and at safety-net hospitals serving a disproportionate percentage of these patients. Cancer surgery at safety-net hospitals has been associated with delays, or failures, in receiving treatment (both surgical and adjuvant) and an increased risk of death. In addition, major postoperative complications and readmissions occur commonly among cancer surgery patients, both of which are associated with increased risk of death; readmission rates after complex surgery have been reported to be as high as 59% in one year. Transitions to home after cancer surgery can be difficult because of pain, decreased function and mobility, and surgery-related symptoms or complications. These transitions may be even more difficult among patients with limited social support, reduced health literacy, and unclear expectations regarding post-operative recovery. Comprehensive care programs for high-risk neonates and chronically ill
children have been successfully implemented in resource-poor, inner-city settings (Dallas and Houston, Texas) by Dr. Jon Tyson (UT Health). Both of these programs resulted in significantly reduced healthcare utilization (intensive care unit admissions, hospitalizations, emergency room visits) and costs. The comprehensive care program for chronically ill children in Houston was associated with a difference in combined inpatient and outpatient costs per year of almost $20K (preliminary analyses). (Broyles RS, Tyson JE, Heyne ET, et al. Comprehensive follow-up care and life-threatening illnesses among high-risk infants: A randomized controlled trial. Jama 2000;284:2070-6.) Thus, there is good rationale and evidence to suggest that a comprehensive transitional care program would reduce readmissions and emergency room visits without increasing costs in high-risk surgical patients. The program could have other potential benefits such as: decreased patient anxiety and increased patient satisfaction; improved quality of care (and care coordination); improved access to specialty care; and reduced disparities in surgical and cancer-specific outcomes. A comprehensive care coordination and transitions program will be developed and implemented for cancer surgery patients, which will provide deliberate organization of patient care activities between all care givers and participants (including the patients) involved in a patient's care that facilitates the right care at the right time and ensures continuity of care, avoids preventable poor outcomes, and promotes the safe and timely transfer of patients from one level of care to another, or from one type of setting to another.

In addition to targeting cancer surgery patients, we will also provide transitions of care targeting patients admitted with DKA. Often the indigent patients keep cycling back and forth in the hospital with multiple DKA admissions. Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays. Hence, intensive monitoring as part of this project is needed to improve treatment compliance and reduce readmission rates in these patients. This enhanced transitions of care project could improve diabetes-related health outcomes in indigent patients with diabetes, who are prone to occurrence of diabetic ketoacidosis (DKA). With the addition of critical personnel to Endocrine Services, practice providers will: 1. Survey daily hospital admissions for diagnosis of DKA, 2. Visit patients, explain the program, and schedule patients for outpatient follow-up in the DKA clinic within 2 weeks of discharge, 3. Maintain contact with the patient at home to facilitate home insulin treatment and ensure outpatient clinic visit on appointed day, 4. Work with Dr. Orlander (UT) to ensure appropriate outpatient testing and care for the patient, and 5. Maintain a DKA database to monitor cost-effectiveness and clinical outcomes over time.

Also, children and adolescents with type 1 diabetes or other forms of early onset diabetes need a well-structured transitional care program to move from (usually highly organized) pediatric diabetes management to (usually less structured, more self-managed) adult diabetes management at the age of 18 years. The first encounter of “graduating” pediatric diabetic patients with the adult health care system is often in the hospital ED in diabetic ketoacidosis due to a lack of insulin or an untreated acute illness. DKA is a highly preventable cause of medical admission and could result in death. Children with type 1 diabetes constitute a special needs population as there is currently no program that pays special attention to their peculiar needs when "graduating" to adult care. Advanced practice providers will identify all adolescent diabetic patients who will “graduate” from pediatric to adult diabetes specialist care in the following 6 months, work with the patients and their parents to arrange the first adult diabetes clinic visit, ensure continuing supply of insulin and other necessary medications during the transition, and
arrange for diabetes education in self-management as an adult diabetic patient, and maintain a database for outcomes of this project.

**Goal and Relationship to Regional Goals:**

*Project Goal:*

To implement improvements in care transitions and coordination of care from inpatient to outpatient, post-acute care, and home care settings in order to prevent increased health care costs and hospital readmissions.

*This project addresses the following regional goal:*

Care transitions project will make it easier for patients to access care in a coordinated manner, thereby attaining the regional goal to "transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services..."

**Challenges:**

Need: 1) High rates of preventable hospital readmissions. 2) Insufficient access to care coordination practice management and integrated care treatment programs.

Implementation: 1) Ability to provide culturally appropriate discharge support. 2) Tackling barriers to compliance such as inability to afford care, transportation, and low literacy levels. 3) Identifying the main barriers and facilitators of implementing a comprehensive care program. 4) Designing a feasible, effective, and self-sustainable program to address the problem of Unplanned readmissions. 5) Coordinating care across multiple services. 6) Determining which components of the multi-level program are most effective and efficient for which patients.

Dr. Jon Tyson's expertise in designing and implementing comprehensive care programs will assist us in addressing the implementation challenges.

**5-Year Expected Outcome for Provider and Patients:**

This transitional care project will provide "a broad range of time-limited services designed to ensure health care continuity, avoid preventable poor outcomes among at-risk populations, and promote the safe and timely transfer of patients from one level of care to another or from one type of setting to another." The at-risk populations will include the Medicaid and Medicaid-eligible patients of Memorial Hermann Hospital and UT Physicians. Patients receiving timely care, appointments and information, will have better outcomes and improved patient satisfaction.

Through this transitions of care project that targets 3 specific groups at high risk for inpatient hospitalization, we expect to have completed evidence-based care transitions processes for approximately **2,000 unique patients**. Through these transitions of care processes, if only 1 in-patient admission (estimated cost of about $25,000 each) is prevented for 20% of these unique patients, the project would have already paid for itself by the end of DY5. A very conservative estimate of the proportion of these that would be Medicaid, or Medicaid-eligible, is approximately 460. The proportion of DKA admissions that are for Medicaid, or Medicaid-eligible, patients in particular is expected to run at a much higher rate.

**Starting Point/Baseline:**

This is a new project, so baseline is set at zero. Targets are based upon current number of patients in target groups and project capacity. In 2012, UT Physicians conducted 2,324 cancer surgeries at MHH-TMC for 752 unique patients, for an average of just over 3 surgeries per
patient. In the same year, UT Physicians at MHH-TMC attended 474 DKA admissions for 144 unique patients. Over 42% of patients admitted for DKA had 4, or more, DKA admission that same year. UT Physicians currently has 178 adolescent patients with Type 1 diabetes that will be transitioning to adult care by the end of DY5.

**Rationale:**

When a patient is discharged without optimal follow-up, it could have terrible consequences such as hospital readmission and possibly death. Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays. Additionally, poorly designed discharge processes create unnecessary stress for medical staff causing failed communications, rework, and frustrations. A comprehensive and reliable discharge plan, along with proactive post-discharge support, can reduce readmission rates and improve health outcomes.

**Project Components:**

Through the UT Physicians Transitions of Care Program, we propose to meet all required project components listed below.

1) UTP will recruit additional staff to manage the transitions of care program.
2) UTP will work with MHH to develop processes using best practices and evidence-based protocols for effectively communicating with patients and families during discharge to improve adherence to discharge and follow-up care instructions. These processes will include:
   a. Use of discharge checklists,
   b. Development of post-discharge medication planning,
   c. Arranging post-op clinic visit before discharge,
   d. Development of “Hand off” communication plans between providers, and
   e. Provision of patient and family post-operative recovery education and wellness education.
3) UTP will conduct follow-up contacts with discharged patients using automated flags and reminders.

**Milestones and Metrics:**

For the UT Physicians Transitions of Care Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

**Process Milestones and Metrics:**

**Milestone 1 [P-X.]:** Complete a planning process/submit a plan for the implementation of a major program/process redesign
Metric 1 [P-X.1.]: Implementation plan (eligibility criteria, implementation components, responsibilities, and timeline).

**Milestone 2 [P-X.]:** Designate/hire personnel or teams to support and/or manage the project/intervention
Metric 1 [P-X.2.]: Project managers, personnel assigned to teams, and team responsibilities

**Milestone 4 [P-1.]:** Develop best practices or evidence-based protocols for effectively communicating with patients and families during and post-discharge to improve adherence to discharge and follow-up care instructions.
Metric 1 [P-1.1.]: Care transitions protocols

**Milestone 5** [P-1.]: Develop best practices or evidence-based protocols for effectively communicating with patients and families during and post-discharge to improve adherence to discharge and follow-up care instructions.

Metric 1 [P-1.1.]: Care transitions protocols

**Milestone 6** [P-1.]: Develop best practices or evidence-based protocols for effectively communicating with patients and families during and post-discharge to improve adherence to discharge and follow-up care instructions.

Metric 1 [P-1.1.]: Care transitions protocols

**Milestone 7** [P-7.]: Develop a staffing and implementation plan to accomplish the goals/objectives of the care transitions program

Metric 1 [P-7.1.]: Documentation of the staffing plan.

**Milestone 8** [P-2.]: Implement standardized care transition processes

Metric 1 [P-2.1.]: Care transitions policies and procedures

**Milestone 9** [P-2.]: Implement standardized care transition processes

Metric 1 [P-2.1.]: Care transitions policies and procedures

**Milestone 10** [P-2.]: Implement standardized care transition processes

Metric 1 [P-2.1.]: Care transitions policies and procedures

**Milestone 11** [P-12.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-12.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 12** [P-12.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-12.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Improvement Milestones and Metrics:**

**Milestone 3** [I-10.]: Identify the top chronic conditions (e.g., heart attack, heart failure and pneumonia) and other patient characteristics (e.g., medical home assignment and demographics such as age) or socioeconomic factors (e.g., homelessness) that are common causes of avoidable readmissions

Metric 1 [I-10.1.]: Identification and report of those conditions, socioeconomic factors, or other patient characteristics resulting in highest rates of re-admissions.

**Milestone 12** [I-14]: Implement standard care transition processes in specified patient populations.

Metric 1 [I-14.1]: Measure adherence to processes.

**Milestone 13** [I-14]: Implement standard care transition processes in specified patient populations.

Metric 1 [I-14.1]: Measure adherence to processes.

**Milestone 15** [I-14]: Implement standard care transition processes in specified patient populations.

Metric 1 [I-14.1]: Measure adherence to processes.

**Milestone 16** [I-14]: Implement standard care transition processes in specified patient populations.
Metric 1 [I-14.1]: Measure adherence to processes.

**Milestone 17** [I-14]: Implement standard care transition processes in specified patient populations.

Metric 1 [I-14.1]: Measure adherence to processes.

**Unique community need identification numbers the project addresses:**

This project addresses community needs CN.6 (Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly), CN.7 (Insufficient access to care coordination practice management and integrated care treatment programs), CN.9 (High rates of preventable hospital readmissions), and CN.10 (High rates of preventable hospital admissions).

**How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:**

The project represents a new initiative. UT Physicians does not currently have any of the transitions of care initiatives described in this project.

**Related Category 3 Outcome Measure(s):**

OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs )

- IT-3.3 Diabetes 30 day readmission rate (Standalone measure)

Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission. If an index admission has more than 1 readmission, only first is counted as a readmission. Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of diabetes and with a complete claims history for the 12 months prior to admission.

**Relationship to other Projects:**

1.1 (C3) - The expanded capacity to deliver primary care will ensure that patients are able to be assigned to a care team in the UT medical homes.

1.2 (A2, SPH1) - The innovative residency program and the training of community health workers will ensure availability of human resources to facilitate the transition of patients between care givers in a medical home.

1.3 (C12) - The disease management registry will be a useful resource for the care team in ensuring that continuity of care is maintained.

1.7 (A1) - Telemedicine capabilities within the UT Medical Homes will provide increased capacity to deliver both primary and specialty care services to patients when and where needed.

1.9 (C4) - The expansion of specialty care in the primary care setting will provide a greater availability of needed services for cancer patients with complex needs.

2.1 (C1-2) - The UT Health Multispecialty Physician Group will provide an extensive network of specialty support centers for primary care providers in advanced medical homes, better equipped to care for patients transitioning from acute care who have complex needs.

2.2 (C5-9,CL3) - The chronic care management models being implemented within the UT Medical Homes will provide improved care for cancer patients who must also manage a chronic disease.
**Relationship to Other Performing Providers’ Projects in the RHP:**

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

**Plan for Learning Collaborative:**

UTHealth will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:**

The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria, and the reasons two of the criteria were not used:

1. **Transformational Impact** (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. **Population Served/Project Size** (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.

3. **Aligned with Community Needs** (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. **Cost Avoidance** (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. **Partnership/Collaboration** (Weight = 10%): **This was not rated**, because UTHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.
6. **Sustainability** (Weight = 15%): *This was also not rated*, because UTHealth does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $11,863,840
Project Option 2.15.1- 2.15 Integrate Primary and Behavioral Health Care Services: Integrated Primary and Behavioral Health Care Services

Unique RHP Project ID: 111810101.2.7
Performing Provider Name/TPI: UTHealth, UTPhysicians / 111810101

Project Summary:

Provider: UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

Intervention(s): UT Health will design, implement and evaluate a project that will integrate primary and behavioral healthcare services within UT Physicians’ clinics to achieve a close collaboration in a partly integrated system of care (Level IV). A behavioral health provider will be placed in the primary care setting to provide patients with behavioral health services at their usual source of health care. This will facilitate care coordination between primary and behavioral healthcare.

Need for the project: This project addresses several community needs including inadequate access to behavioral health care, and high rates of tobacco use and excessive alcohol use. The Health of Houston Survey, 2010, reported that 9% of residents did not see a behavioral health professional, even though they felt it was needed. Service integration will help to address the reasons care was not sought by the 31% that felt uncomfortable about it, the 22% that was concerned that someone would find out, the 17% that had trouble getting an appointment, and the 59% that had cost concerns.

Target Population: The service areas of our 4 outlying clinics include health professional shortage areas, and medically underserved areas and populations. Using the Harris County rate (14.5%) of Medicaid clients, there are an estimated 1,423,176 Medicaid clients living within our service areas. In FY 2012, UTP provided 321,716 patient visits and expects to add another 80,000 (most, of which are expected to be Medicaid clients) primary and specialty patient visits (not counting behavioral health) by DY5 for over 400,000 patient visits.

Category 1 or 2 expected patient benefits:
By DY5, we expect to have completed 24,074 behavioral health visits in an integrated program of primary care and behavioral health care. Of these, at least 5,537 are expected to be Medicaid visits.

Category 3 outcomes:
Our goals are to increase, the percentage of UT Physicians patients who receive screening for clinical depression using a standardized tool, and for whom a follow-up plan is documented (IT-1.8), and to increase the number of patients with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months (IT-1.9).
Project Option 2.15.1 – Integrate Primary and Behavioral Health Care Services: Integrated Adult Primary and Behavioral Health Care Services

Unique RHP Project Identification Number: 111810101.2.7
Performing Provider Name/TPI: UTHealth, UT Physicians/111810101

Project Description: 2.15 Integrate Primary and Behavioral Health Care Services (Option 2.15.1)

UT Health will design, implement and evaluate a project that will integrate primary and behavioral health care services within UT Physicians clinics to achieve a close collaboration in a partly integrated system of care (Level IV). The project will recruit and place behavioral health providers in UT Physicians’ primary care settings to provide patients with behavioral health services at their usual source of health care and will facilitate the coordination of care involving both primary and behavioral health. The project will focus on low behavioral health – low physical health complexity/risk (Quadrant I) and low behavioral health – high physical health complexity/risk (Quadrant III) of the Four Quadrant Model, which are most amendable to the primary care settings. This project will be structured to achieve level 4 (close collaboration in a partly integrated system, where providers share the same facility and share scheduling systems and medical records, and have regular face-to-face communication, functioning as a team), or preferably level 5, levels of interaction (close collaboration in a fully integrated system, where providers are part of the same team and system and the patient experiences mental health treatment as part of their regular primary care or vice versa). The need for any legal agreements that may be needed in a collaborative practice will be explored for this project, and in addition necessary arrangements will be made for facilities to achieve this service integration.

Along with the co-location of services, protocols, training, and team building will be implemented to improve communications and enhance coordination of care to deliver care that meets the needs of the whole person. Finally, through project MS1 (UT Health Regional Systems Engineering Center and UT Health Quality Improvement Dashboard Development Center), the systems engineering and QI teams at UT Health will identify QI targets and methods needed to achieve continuous quality improvement for this project, especially as it relates to identifying challenges for expansion, and building on lessons learned.

Goal and Relationship to Regional Goals:
Project Goal:
Integrate primary care and behavioral health care services in order to improve care and access to needed services.
This project addresses the following regional goal:
Provision of both physical and behavioral health services in one location will make care more accessible to patients in a convenient location, and this relates to one of the goals of the region which is to "develop a regional approach to health care delivery that leverages and
improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction”.

Challenges:

Need: 1) Insufficient access to integrated care programs for behavioral health and physical health conditions. 2) Inadequate access to behavioral health care. 3) High rates of tobacco use and excessive alcohol use.

Implementation: 1) Motivation and ability of primary care and behavioral health teams to work together. 2) Patient awareness about service availability.

Despite high indicators of need, patients experience barriers in accessing behavioral health services, such as the stigma attached to mental health facilities and the inconvenience of adding another visit to their health care regimen. The integration of behavioral and primary care in this project enables patients to access coordinated efficient care in a convenient and less-stigmatized setting. Primary care providers will be trained to consult with and direct patients that may need behavioral health care services to the behavioral health provider. The behavioral health provider will have access to the patient’s records and be trained to consult with and direct patients to the primary care provider that may warrant further primary care services, or screenings. Patients will be able to address both behavioral health needs and primary care needs in a single visit.

5-Year Expected Outcome for Provider and Patients:

Attainment of a level 4 or 5 integration level in primary care and behavioral health will help to achieve optimal patient outcomes. This will lead to increased screening and better management of depression in the population served by UT Physicians and better health overall. In addition to benefiting the current Medicaid (23% as of 2011, or 65,302 patient visits) and low-income client base of UTP clinics, the program will be available to an additional 1,423,176 Medicaid and Medicaid-eligible residents living within the service areas of the UT Physician Clinics. In FY 2012, UTP provided 321,716 patient visits and expects to add another 80,000 (most, of which are expected to be Medicaid clients) primary and specialty patient visits (not counting behavioral health) by DY5 for over 400,000 patient visits.

With this project, we expect to deliver approximately 5,760 counseling sessions and 3,600 psychiatry session per year, for a total of 9,360 behavioral health visits per year, once fully ramped up. By DY5, we expect to have completed 24,074 behavioral health visits in an integrated program of primary care and behavioral health care. Of these, at least 5,537 are expected to be Medicaid visits. This is a very conservative estimate, because the growth in these clinics is expected to occur at a much higher payer mix for Medicaid than the current 23%.

Starting Point/Baseline:

There is currently no program in place for behavioral health services in any of our primary care clinics. Baseline metrics and measures will be all-inclusive from the outset of the program as defined in the milestones table and the Category 3 outcomes table. Currently, the 4 UTP community primary care clinics see 57,000 patient visits. Our expansion of primary care project for these clinics is expected to generate an additional 36,458 patient visits by the end of DY5, with at least 8,385 of them being Medicaid visits. In these clinics, there are currently already 1,097 adult patients with a mental health diagnosis that could benefit from this program. Furthermore, there is no current regular mental health screening that takes place in these clinics.

Regional Healthcare Partnership Plan  Region 3  1586
Rationale:

Patients will be able to receive care that is more convenient (located within their community and in a clinic offering extended hours), coordinated (ability to address both conditions in a single visit), and in a setting that reduces the stigma of receiving behavioral health services, since it is located within the primary care setting. The Health of Houston Survey, 2010, reported that 9% of residents did not see a behavioral health professional, even though they felt it was needed. The integration of behavioral health into the primary care setting will help to address the reasons care was not sought by the 31% that felt uncomfortable about it, the 22% that was concerned that someone would find out, the 17% that had trouble getting an appointment, and the 59% that were concerned about the cost. The primary care setting can provide increased continuity of care for behavioral health care problems, often occurring over extended periods of time, with symptoms that range from well-controlled to severe.

Project Components:

Through the Integrated Primary and Behavioral Health Care Services Program, we propose to meet all required project components listed below.

1. UTP will identify sites for integrated care projects, which would have the potential to benefit a significant number of patients in the community.
2. UTP will develop provider agreements whereby co-scheduling and information sharing between physical health and behavioral health providers could be facilitated. UTP will also develop any necessary legal agreements that may be needed in a collaborative practice.
3. Also, protocols and processes for communication, data sharing, and referral between behavioral and physical health providers will be established that will include:
   a. Regular consultative meetings between physical health and behavioral health practitioners,
   b. Case conferences on an individualized as-needed basis to discuss individuals served by both types of practitioners, and/or
   c. Shared treatment plans co-developed by both physical health and behavioral health practitioners.
4. UTP will recruit specialty providers (mental health and substance abuse) and support staff to provide mental health services in the primary care clinics.
5. UTP will train physical and behavioral health providers in protocols, effective communication and team approach.
6. UTP will acquire the necessary data reporting, communication and collection tools (equipment) to be used in the integrated setting.
7. UTP will develop and implement data collection and reporting mechanisms and standards to track the utilization of integrated services as well as the health care outcomes of individual treated in these integrated service settings.
8. UTP’s quality improvement office will conduct QI for each of the clinics providing specialty care using methods such as rapid cycle improvement.

Milestones and Metrics:

For the Integrated Primary and Behavioral Health Care Services Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.
**Process Milestones and Metrics:**

**Milestone 1** [P-1.]: Conduct needs assessment to determine areas of the state where the colocation of services has the potential to benefit a significant number of people who have physical/behavioral health needs  
Metric 1 [P-1.1.]: Numbers of patients in various areas who might benefit from integrated services: demographics, location, & diagnoses  

**Milestone 2** [P-2.]: Identify existing clinics or other community-based settings where integration could be supported. It is expected that physical health practitioners will share space in existing behavioral health settings, but it may also be possible to include both in new settings or for physicians to share their office space with behavioral health practitioners.  
Metric 1 [P-2.1.]: Discussions/Interviews with community healthcare providers (physical and behavioral), city and county governments, charities, faith-based organizations and other community based helping organizations.  

**Milestone 3** [P-5.]: Develop integrated sites reflected in the number of locations and providers participating in the integration project.  
Metric 1 [P-5.1.]: Number of agreements signed for the provision of integrated services  
**Milestone 4** [P-5.]: Develop integrated sites reflected in the number of locations and providers participating in the integration project.  
Metric 3 [P-5.3.]: Number of behavioral health providers newly located in primary care clinics.  

**Milestone 5** [P-3.]: Develop and implement a set of standards to be used for integrated services to ensure effective information sharing, proper handling of referrals of behavioral health clients to physical health providers and vice versa.  
Metric [P-3.1.]: Number and types of referrals that are made between providers at the location  

**Milestone 6** [P-6.]: Develop integrated behavioral health and primary care services within colocated sites.  
Metric 1 [P-6.1.]: Number of providers achieving Level 4 of interaction (close collaboration in a partially integrated system).  

**Milestone 7** [P-10.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.  
Metric 1 [P-10.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.  

**Milestone 10** [P-10.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.  
Metric 1 [P-10.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Improvement Milestones and Metrics:**

**Milestone 8** [I-8.]: Integrated Services  
Metric 1 [I-8.1.]: X% of Individuals receiving both physical and behavioral health care at the established locations.  

**Milestone 9** [I-12.]: Improved Consumer satisfaction with Integrated Services  
Metric 1 [I-12.1.]: Metric: X% of People report satisfaction with integrated services
**Milestone 11 [I-9.]: Coordination of Care**

**Metric 1 [I-9.1.]:** X% of Individuals with a treatment plan developed and implemented with primary care and behavioral health expertise

**Unique community need identification numbers the project addresses:**

This project addresses community needs CN.3 (Inadequate access to behavioral health care), CN.12 (High rates of tobacco use and excessive alcohol use), and CN.18 (Insufficient access to integrated care programs for behavioral health and physical health conditions).

**How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:**

This project represents a new initiative. UT Physicians does not currently provide behavioral health care at its 4 outlying (outside the TMC) clinics. UT Physicians will hire behavioral health providers to work with primary care providers to provide comprehensive and integrated care for patients in these 4 clinics, which serve areas that include large populations with economic, cultural, language, and transportation barriers to receiving care.

**Related Category 3 Outcome Measure(s):**

**OD-1 Primary Care and Chronic Disease Management**

- IT-1.8 Depression management: Screening and Treatment Plan for Clinical Depression (PQR 2011, #134) (Non-standalone measure)
  
  *Numerator:* Patient’s screening for clinical depression using a standardized tool AND follow-up plan is documented.

**OD-1 Primary Care and Chronic Disease Management**

- IT-1.9 Depression management: Depression Remission at Twelve Months (NQF# 0710) (Standalone measure)
  
  *Numerator:* Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.
  
  *Denominator:* Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine.

  *Exclusions:* Patients who die, are a permanent resident of a nursing home or are enrolled in hospice are excluded from this measure. Additionally, patients who have a diagnosis (in any position) of bipolar or personality disorder are excluded.

**Relationship to other Projects:**

1.1 (C3) - Expanded primary care services will ensure there is reserve capacity to handle the increased collaboration necessary for integration physical health care with behavioral health care in the primary care setting.

1.2 (A2, SPH1) - Structured educational training for health care providers on team-based models of care will equip physicians and CHWs with the knowledge and skills to deliver this integrated model of care.

1.3 (C12) - The disease management registries will be a useful tool for the integrated care team in providing appropriate care for patients managing chronic diseases.

1.6 (C11) - The nurse triage line will provide 24/7 access to care for patients receiving both behavioral and physical health care.
1.7 (A1) - The telemedicine program will provide greater access for patients to their care providers (behavioral, primary and specialty care) when needed, particularly when distance is a barrier.

1.9 (C4) - The expansion of specialty services in the primary care setting will help to ensure that patients receiving integrated care will also have access to other specialty care when necessary in the same care setting.

2.1 (C1-2) - Patients receiving the integrated model of behavioral and physical health care will be enrolled in the UT Health Medical Homes.

2.2 (C5-9,CL3) - Patients with chronic diseases receiving the integrated model of behavioral and physical health care, will also received evidence-based care for their chronic disease. UTHealth will be using Wagner's chronic disease management model to manage chronic disease.

2.11 (C10) - The medication management program will be an integral component in the provision of integrated behavioral and physical health care.

**Relationship to Other Performing Providers’ Projects in the RHP:**

The cohabitation of primary care and behavioral health is an important focus of our region in order to treat the patient base with comprehensive physical and behavioral healthcare issues. There are multiple initiatives in our RHP plan that address this need and all can be found on the Region 3 Initiative Grid in the addendums. The outcome measures focused to screening measures and access of the patient base.

**Plan for Learning Collaborative:**

UTHealth will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:**

The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria, and the reasons two of the criteria were not used:

1. **Transformational Impact** (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. **Population Served/Project Size** (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.
3. **Aligned with Community Needs** (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. **Cost Avoidance** (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. **Partnership/Collaboration** (Weight = 10%): *This was not rated*, because UTHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. **Sustainability** (Weight = 15%): *This was also not rated*, because UTHealth does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

### Year 2 (10/1/2012 – 9/30/2013)

**Milestone 1 [P-1.]:** Conduct needs assessment to determine areas of the state where the colocation of services has the potential to benefit a significant number of people who have physical/behavioral health needs.

**Metric 1 [P-1.1.]:** Numbers of patients in various areas who might benefit from integrated services: demographics, location, & diagnoses

**Baseline:** Currently there are no behavioral health services co-located in UTP primary care clinics

**Goal:** To complete a needs assessment that will identify the degree of need and areas where co-location of services will provide the greatest benefit.

**Data Source:** Inpatient, discharge and ED records; survey of primary care providers; survey of behavioral health providers; state demographic information relating to treated health conditions; Medicaid claims data

**Milestone 1 Estimated incentive payment:** $1,484,661

### Year 3 (10/1/2013 – 9/30/2014)

**Milestone 3 [P-5.]:** Develop integrated sites reflected in the number of locations and providers participating in the integration project

**Metric 1 [P-5.1.]:** Number of agreements signed for the provision of integrated services

**Goal:** Sign agreements to integrate services at clinics identified for co-location of services, based on DY2 assessments.

**Data Source:** Project data

**Milestone 3 Estimated incentive payment:** $1,116,286

### Year 4 (10/1/2014 – 9/30/2015)

**Milestone 6 [P-6.]:** Develop integrated behavioral health and primary care services within collocated sites.

**Metric 1 [P-6.1.]:** Number of providers achieving Level 4 of interaction (close collaboration in a partially integrated system).

**Goal:** Currently there is no such service integration in any of our clinics. The goal will be to achieve integrated behavioral/primary care services at 100% of clinics wherein services are co-located.

**Data Source:** Project data

**Milestone 6 Estimated incentive payment:** $1,160,938

### Year 5 (10/1/2015 – 9/30/2016)

**Milestone 7 [P-10.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

**Metric 1 [P-10.1.]:** Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 9 [I-12.]:** Improved Consumer satisfaction with Integrated Services

**Metric 1 [I-12.1.]:** Metric: X% of People report satisfaction with integrated services

**Goal:** A statistically significant increase at the 95% level over the previous reporting period for the behavioral health providers co-located in primary care clinics.

**Data Source:** Survey data from CAHPS

**Milestone 9 Estimated incentive payment:** $1,111,325

**Milestone 10 [P-10.]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

**Metric 1 [P-10.1.]:** Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

**Milestone 10 Estimated incentive payment:** $1,111,325
<table>

**Milestone 2** [P-2.]: Identify existing clinics or other community-based settings where integration could be supported. It is expected that physical health practitioners will share space in existing behavioral health settings, but it may also be possible to include both in new settings or for physicians to share their office space with behavioral health practitioners.

**Metric 1** [P-2.1.]: Discussions/Interviews with community healthcare providers (physical and behavioral), city and county governments, charities, faith-based organizations and other community based helping organizations. Goal: UTP primary care clinic physicians, and other community-based organizations will be interviewed about behavioral health needs for their patients and possibilities for co-locations of services to achieve an integrated model of care.

Data Source: Information from persons interviewed

Milestone 2 Estimated incentive payment: $1,116,286

**Milestone 4** Estimated incentive payment: $1,116,286

**Milestone 5** [P-3.]: Develop and implement a set of standards to be used for integrated services to ensure effective information sharing, proper handling of referrals of behavioral health clients to physical health providers and vice versa.

**Metric [P-3.1.]:** Number and types of referrals that are made between providers at the location. Goal: 70% of behavioral health referrals from a UTP primary care provider at the integrated clinics will be to the behavioral health provider practicing at that same clinic.

Data Sources: Review of referral data

Milestone 5 Estimated incentive payment: $1,116,286

**Milestone 7** Estimated incentive payment: $1,160,938

**Milestone 8** [I-8.]: Integrated Services

**Metric [I-8.1.]:** X% of Individuals receiving both physical and behavioral health care at the established locations. Goal: 25% of UTP patients needing behavioral health services.

Data Source: Project data; claims and encounter data; medical records

Milestone 8 Estimated incentive payment: $1,160,937

**Milestone 10** Estimated incentive payment: $1,111,324

**Milestone 11** [I-9.]: Coordination of Care

**Metric [I-9.1.]:** X% of Individuals with a treatment plan developed and implemented with primary care and behavioral health expertise. Goal: 70% of UTP patients that are receiving both primary and behavioral health care at the integrated clinics will have a treatment plan developed and implemented with primary care and behavioral health expertise.

Data Source: Project data; claims and encounter data; medical records

Milestone 10 Estimated incentive payment: $1,111,324

The University of Texas Health Science Center - Houston
Pass 3
**Project Option 2.15.1- 2.15 Integrate Primary and Behavioral Health Care Services:**

**Integrated Primary and Behavioral Health Care Services for Children and Adolescents**

**Unique RHP Project ID:** 111810101.2.8

**Performing Provider Name/TPI:** UTHealth, UTPhysicians / 111810101

**Project Summary:**

**Provider:** UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

**Intervention(s):** UT Health will design, implement and evaluate a project that will integrate primary and behavioral healthcare services for children and adolescents within UT Physicians’ clinics to achieve a close collaboration in a partly integrated system of care (Level IV). A pediatric behavioral health provider will be placed in the primary care setting to children and adolescents with behavioral health services at their usual source of health care. This will facilitate care coordination between primary and behavioral healthcare.

**Need for the project:** 20% of children either have, or will have a debilitating mental disorder and about 13% of children ages 8 to 15 had a diagnosable mental disorder within the previous year, though only half received any treatment. This project addresses several community needs including inadequate access to behavioral health care.

**Target Population:** The service areas of our 4 outlying clinics include health professional shortage areas, and medically underserved areas and populations. Using the Harris County rate (14.5%) of Medicaid clients, there are an estimated 1,423,176 Medicaid clients living within our service areas.

**Category 1 or 2 expected patient benefits:**
Based on the planned expanded capacity in pediatric behavioral health of this project, we expect to deliver approximately 5,760 counseling sessions and 3,600 psychiatry session per year, for a total of 9,360 behavioral health visits per year, once fully ramped up. By DY5, we expect to have completed approximately **24,000** behavioral health visits in an integrated program of primary care and behavioral health care. Of these, over **5,500** are expected to be Medicaid visits.

**Category 3 outcomes:**
Our goal is to improve patient quality of life (QOL) as measured by the evidence based and validated assessment tool, the 23-item PedsQL™ Generic Core questionnaire, for the target population (IT-10.1).
Project Option 2.15.1 – Integrate Primary and Behavioral Health Care Services: Integrated Primary and Behavioral Health Care Services for Children and Adolescents

Unique RHP Project Identification Number: 111810101.2.8
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Project Description: 2.15 Integrate Primary and Behavioral Health Care Services (Option 2.15.1)

UT Health will design, implement and evaluate a project that will integrate primary and behavioral health care services for children and adolescents within UT Physicians 4 outlying clinics and the pediatric specialty clinic in the Texas Medical Center in order to achieve a close collaboration in a partly integrated system of care (Level IV). The project will recruit and place a pediatric behavioral health provider in the 4 primary care settings and the 1 pediatric specialty care clinic to provide children and adolescents with behavioral health services at their usual source of health care and will facilitate the coordination of care involving both primary and behavioral health. For the 4 outlying clinics, the project will focus on low behavioral health – low physical health complexity/risk (Quadrant I) and low behavioral health – high physical health complexity/risk (Quadrant III) of the Four Quadrant Model, which are most amendable to the primary care settings. Quadrants II and IV will be included with Quadrants I and III for the pediatric specialty care clinic in the Texas Medical Center. This project will be structured to achieve level 4 interaction (close collaboration in a partly integrated system, where providers share the same facility and share scheduling systems and medical records, and have regular face-to-face communication, functioning as a team), or preferably level 5 interaction (close collaboration in a fully integrated system, where providers are part of the same team and system and the patient experiences mental health treatment as part of their regular primary care or vice versa). The need for any legal agreements that may be needed in a collaborative practice will be explored for this project, and in addition necessary arrangements will be made for facilities to achieve this service integration.

Along with the co-location of services, protocols, training, and team building will be implemented to improve communications and enhance coordination of care to deliver care that meets the needs of the whole person. Finally, through project MS1 (UT Health Regional Systems Engineering Center and UT Health Quality Improvement Dashboard Development Center), the systems engineering and QI teams at UT Health will identify QI targets and methods needed to achieve continuous quality improvement for this project, especially as it relates to identifying challenges for expansion, and building on lessons learned.

Goal and Relationship to Regional Goals:
Project Goal:
Integrate primary care and behavioral health care services in order to improve care and access to needed services.
This project addresses the following regional goal:

Provision of both physical and behavioral health services in one location will make care more accessible to patients in a convenient location, and this relates to one of the goals of the region which is to "develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction".

Challenges:

Need: 1) Insufficient access to integrated care programs for behavioral health and physical health conditions. 2) Inadequate access to behavioral health care. 3) High rates of tobacco use and excessive alcohol use.

Implementation: 1) Motivation and ability of primary care and behavioral health teams to work together. 2) Patient awareness about service availability.

Despite high indicators of need, parents of pediatric patients experience barriers in accessing behavioral health services, such as the stigma attached to mental health facilities and the inconvenience of adding another visit to their child’s health care regimen. The integration of pediatric behavioral and primary care in this project enables parents of pediatric patients to access coordinated efficient care in a convenient and less-stigmatized setting. Primary care providers will be trained to consult with and direct patients that may need behavioral health care services to the pediatric behavioral health provider. The pediatric behavioral health provider will have access to the patients records and be trained to consult with and direct patients to the primary care provider that may warrant further primary care services, or screenings. Parents of pediatric patients will be able to address both behavioral health needs and primary care needs in a single visit.

5-Year Expected Outcome for Provider and Patients:

Attainment of a level 4 or 5 integration level in primary care and behavioral health will help to achieve optimal patient outcomes. This will lead to increased screening and better management of depression and other behavioral health diagnoses in the population served by UT Physicians and better health overall.

Based on the planned expanded capacity in pediatric behavioral health of this project, we expect to deliver approximately 5,760 counseling sessions and 3,600 psychiatry session per year, for a total of 9,360 behavioral health visits per year, once fully ramped up. By DY5, we expect to have completed approximately 24,000 behavioral health visits in an integrated program of primary care and behavioral health care. Of these, over 5,500 are expected to be Medicaid visits. This is a very conservative estimate, because the growth in these clinics is expected to occur at a much higher payer mix for Medicaid than the current 23%.

Starting Point/Baseline:

There is currently no program in place for behavioral health services in any of our 4 community clinics and there is only one pediatric behavior health provider in our TMC pediatric specialty clinic. Baseline metrics and measures will be all-inclusive from the outset of the program as defined in the milestones table and the Category 3 outcomes table. Unique pediatric (ages 0-17) patients of UTP currently number 1,244 and only 5% (65) have any behavioral health diagnosis in the EMR.
Rationale:
According to the National Institute of Mental Health, 1 in 5 children (20%), either have, or will have a seriously debilitating mental disorder and data from the CDC’s National Health and Nutrition Examination Survey showed that about 13% of children ages 8 to 15 had a “diagnosable mental disorder within the previous year,” yet in the preceding year, only half had received treatment for their disorder. (Merikangas KR, He JP, Merikangas KR, He J, Burstein M, Swanson SA, Avenevoli S, Cui L, Benjet C, Georgiades K, Swendsen J. Lifetime prevalence of mental disorders in U.S. adolescents: Results from the National Comorbidity Study-Adolescent Supplement (NCS-A). J Am Acad Child Adolesc Psychiatry. 2010 Oct;49(10):980-989. http://www.nimh.nih.gov/statistics/1ANYDIS_CHILD.shtml) (Merikangas KR, He JP, Brody D, Fisher PW, Bourdon K, Koretz DS. Prevalence and treatment of mental disorders among US children in the 2001-2004 NHANES. Pediatrics. 2010, 125(1):75-81. http://www.nimh.nih.gov/statistics/1NHANES.shtml) By providing pediatric behavioral health services in the primary care setting, children and adolescents will be able to receive care that is more convenient for their parents (located within their community and in a clinic offering extended hours), coordinated (ability to address both conditions in a single visit), and in a setting that reduces the stigma surrounding behavioral health services, since it is located within the primary care setting.

Project Components:
Through the Integrated Primary and Behavioral Health Care Services Program, we propose to meet all required project components listed below.

a) UTP will identify sites for integrated care projects, which would have the potential to benefit a significant number of children/adolescents in the community.
b) UTP will develop provider agreements whereby co-scheduling and information sharing between physical health and behavioral health providers could be facilitated. UTP will also develop any necessary legal agreements that may be needed in a collaborative practice.
c) Also, protocols and processes for communication, data sharing, and referral between behavioral and physical health providers will be established that will include:
d) UTP will recruit specialty providers (pediatric mental health providers) and support staff to provide mental health services in the primary care clinics and in the pediatric specialty clinic.
e) UTP will train physical and behavioral health providers in protocols, effective communication and team approach.
   • Regular consultative meetings between physical health and behavioral health practitioners,
   • Case conferences on an individualized as-needed basis to discuss individuals served by both types of practitioners, and/or
   • Shared treatment plans co-developed by both physical health and behavioral health practitioners.
f) UTP will acquire the necessary data reporting, communication and collection tools (equipment) to be used in the integrated setting.
g) UTP will develop any necessary legal agreements needed for a collaborative practice.
h) UTP will arrange for utilities and all other building services for the care settings.
UTP will develop and implement data collection and reporting mechanisms and standards to track the utilization of integrated services as well as the health care outcomes of individuals treated in these integrated service settings.

UTP’s quality improvement office will conduct QI for each of the clinics providing specialty care using methods such as rapid cycle improvement.

Milestones and Metrics:
For the Integrated Primary and Behavioral Health Care Services Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

Milestones and Metrics:

Milestone 1 [P-1.]: Conduct needs assessment to determine areas of the state where the colocation of services has the potential to benefit a significant number of people who have physical/behavioral health needs.
Metric 1 [P-1.1.]: Numbers of patients in various areas who might benefit from integrated services: demographics, location, & diagnoses

Milestone 2 [P-2.]: Identify existing clinics or other community-based settings where integration could be supported. It is expected that physical health practitioners will share space in existing behavioral health settings, but it may also be possible to include both in new settings or for physicians to share their office space with behavioral health practitioners.
Metric 1 [P-2.1.]: Discussions/Interviews with community healthcare providers (physical and behavioral), city and county governments, charities, faith-based organizations and other community based helping organizations.

Milestone 3 [P-5.]: Develop integrated sites reflected in the number of locations and providers participating in the integration project.
Metric 1 [P-5.1.]: Number of agreements signed for the provision of integrated services

Milestone 4 [P-5.]: Develop integrated sites reflected in the number of locations and providers participating in the integration project.
Metric 3 [P-5.3.]: Number of behavioral health providers newly located in primary care clinics.

Milestone 5 [P-3.]: Develop and implement a set of standards to be used for integrated services to ensure effective information sharing, proper handling of referrals of behavioral health clients to physical health providers and vice versa.
Metric [P-3.1.]: Number and types of referrals that are made between providers at the location

Milestone 6 [P-6.]: Develop integrated behavioral health and primary care services within colocated sites.
Metric 1 [P-6.1.]: Number of providers achieving Level 4 of interaction (close collaboration in a partially integrated system).

Milestone 7 [P-10.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.
Metric 1 [P-10.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

Milestone 9 [I-12.]: Improved Consumer satisfaction with Integrated Services
Metric 1 [I-12.1.]: Metric: X% of People report satisfaction with integrated services

**Milestone 10** [P-10.]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.

Metric 1 [P-10.1.]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP

**Improvement Milestones and Metrics:**

**Milestone 8** [I-8.]: Integrated Services

Metric 1 [I-8.1.]: X% of Individuals (children/adolescents) receiving both physical and behavioral health care at the established locations.

**Milestone 11** [I-9.]: Coordination of Care

Metric 1 [I-9.1.]: X% of Individuals (children/adolescents) with a treatment plan developed and implemented with primary care and behavioral health expertise

**Unique community need identification numbers the project addresses:**

This project addresses community needs CN.3 (Inadequate access to behavioral health care) and CN.18 (Insufficient access to integrated care programs for behavioral health and physical health conditions).

**How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:**

This project represents a new initiative. UT Physicians does not currently provide pediatric behavioral health care at its 4 outlying (outside the TMC) clinics. UT Physicians will hire behavioral health providers to work with primary care providers to provide comprehensive and integrated care for pediatric patients in these 4 clinics and in the pediatric specialty clinic, which serve areas that include large populations with economic, cultural, language, and transportation barriers to receiving care.

**Related Category 3 Outcome Measure(s):**

IT-10.1 Quality of Life (Standalone measure)

Demonstrate improvement in quality of life (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.

Percent of pediatric patients ages 8-18, who are receiving both behavioral health and primary care in the integrated behavioral/primary care clinic setting for the previous 12 months, that show improvement in scores on the 23-item PedsQL™ Generic Core questionnaire.

Numerator: Patients from the denominator with improvement in scores on the 23-item PedsQL™ Generic Core questionnaire. Denominator: Patients 8-18 years of age as of the measurement year who received at least 12 months consecutive outpatient care for behavioral and primary care in the integrated clinic.

**Relationship to other Projects:**

1.1 (C3) - Expanded primary care services will ensure there is reserve capacity to handle the increased collaboration necessary for integration physical health care with behavioral health care in the primary care setting.
1.2 (A2, SPH1) - Structured educational training for health care providers on team-based models of care will equip physicians and CHWs with the knowledge and skills to deliver this integrated model of care.

1.3 (C12) - The disease management registries will be a useful tool for the integrated care team in providing appropriate care for patients managing chronic diseases.

1.6 (C11) - The nurse triage line will provide 24/7 access to care for patients receiving both behavioral and physical health care.

1.7 (A1) - The telemedicine program will provide greater access for patients to their care providers (behavioral, primary and specialty care) when needed, particularly when distance is a barrier.

1.9 (C4) - The expansion of specialty services in the primary care setting will help to ensure that patients receiving integrated care will also have access to other specialty care when necessary in the same care setting.

2.1 (C1-2) - Patients receiving the integrated model of behavioral and physical health care will be enrolled in the UT Health Medical Homes.

2.2 (C5-9, CL3) - Patients with chronic diseases receiving the integrated model of behavioral and physical health care, will also received evidence-based care for their chronic disease. UTHealth will be using Wagner's chronic disease management model to manage chronic disease.

2.11 (C10) - The medication management program will be an integral component in the provision of integrated behavioral and physical health care.

**Relationship to Other Performing Providers’ Projects in the RHP:**

The cohabitation of primary care and behavioral health is an important focus of our region in order to treat the patient base with comprehensive physical and behavioral healthcare issues. There are multiple initiatives in our RHP plan that addresses this need and all can be found on the Region 3 Initiative Grid in the addendums. The outcome measures focused to screening measures and access of the patient base.

**Plan for Learning Collaborative:**

UT Health will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:**

The anchor, Harris Health, provided a spreadsheet which contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project’s total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project’s total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UT Health used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criteria, and the reasons two of the criteria were not used:
1. **Transformational Impact** (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)).

2. **Population Served/Project Size** (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid.

3. **Aligned with Community Needs** (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses.

4. **Cost Avoidance** (Weight = 15%): Points were awarded based on judgment of project’s cost effectiveness relative to similar projects.

5. **Partnership/Collaboration** (Weight = 10%): *This was not rated*, because UT Health planned to partner with Harris Health to perform many similar projects, so the rating would have been the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. **Sustainability** (Weight = 15%): *This was also not rated*, because UT Health does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criteria again would have had a diluting effect, hiding the more significant variations in other value criteria.

</table>
**Milestone 2 [P-2.]:** Identify existing clinics or other community-based settings where integration could be supported. It is expected that physical health practitioners will share space in existing behavioral health settings, but it may also be possible to include both in new settings or for physicians to share their office space with behavioral health practitioners.

**Metric 1 [P-2.1.]:** Discussions/Interviews with community healthcare providers (physical and behavioral), city and county governments, charities, faith-based organizations and other community based helping organizations.

Goal: Existing 4 clinics will be assessed for space to accommodate providers to address the needs for co-location of services in these clinics. Current clinic physicians will be interviewed about behavioral health needs for their patients. DePelchin Children’s Center will be consulted regarding this need and their capacity to provide contract services for this project.

University of Texas M.D. Anderson Cancer Center
Pass 1
Project Option 2.7.1 – Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (e.g., mammography screens, colonoscopies, prenatal alcohol use, etc.): Colorectal cancer (CRC) screening program for low-income residents of RHP3.

Unique RHP Project ID: 112672402.2.1

Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Summary:
Provider: The University of Texas MD Anderson Cancer Center is a comprehensive cancer center ranked first in cancer care by U.S. News & World Report and dedicated to patient care, education, research and prevention. MD Anderson is comprised of several Texas Medical Center campus locations, two research campuses in Bastrop County, Texas, four regional care centers and a number of national and international divisions and affiliates. More than 108,000 people—almost one-third of them new patients—were seen in FY2011. MD Anderson provided $215 million in uncompensated charity care to Texans in FY2011. This project does not receive funding from, nor does it advance any federal initiatives pertaining to, CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/ Hospital acquired infection) grants.

Intervention(s): This project will expand a two-year Colorectal Cancer (CRC) screening program in Federally Qualified Health Centers (FQHCs) in Harris County into other RHP3 counties. This project targets low-income and underinsured populations with the intent of increasing adherence by distributing Fecal Immunochemical Test (FIT) take-home tests at the time of annual flu inoculation. Patients will receive a FIT test with verbal and written instructions on how to complete the test, brief verbal messages reinforcing the importance of screening (e.g., “an annual FOBT (FIT) test is as important as an annual flu shot”), educational materials, and clinic phone numbers should questions arise.

Need for the project: A) This program relates to the identified Community Needs in RHP3: CN.2-Inadequate access to specialty care; CN.11-High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with cancer; CN.20-Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs; CN.22-Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities; CN.23-Lack of patient navigation, patient and family education and information programs. B) There is a multi-county need as data from the 2010 Behavioral Risk Factor Surveillance indicates that in Public Health Administrative Region 6/5S, only 38.6% of adults 50 years and older reported having ever had a sigmoidoscopy or colonoscopy in the past 5 years, and 13.9% reported annual fecal occult blood testing. This is well below the ACS’ 2015 goal of 75% of all adults over 50 having a recent CRC screening test.

Target Population: Indigent and Medicaid patients, aged 50 years and older, who, in accordance with the U.S. Preventive Services Task Force recommendations, qualify for CRC screening.

Category 1 or 2 expected patient benefits: The DY4 goal is to increase the number in the target population receiving FIT by 5% over DY3. The DY5 goal is to increase number of target population receiving FIT by 5% over DY4.

Category 3 outcomes: IT-12.3: Colorectal Cancer Screening (HEDIS 2012): Number of adults aged 50 -75 who have received one of the following screenings: Fecal occult blood test yearly, flexible sigmoidoscopy every five years, and colonoscopy every 10 years.
IT-12.6 Other Outcome Improvement Target: Flu vaccination status for adults age 50 – 75. IT-12.6 Other Outcome Improvement Target: Increase in adherence to annual flu vaccination and colorectal cancer screening guidelines in Medicaid and indigent population age 50 to 75
Project Option 2.7.1 – Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (e.g., mammography screens, colonoscopies, prenatal alcohol use, etc.): Colorectal cancer (CRC) screening program for low-income residents of RHP3

Unique RHP Project Identification Number: 112672402.2.1  
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Description:  
We propose to implement a FIT-Flu program in RHP3 targeting low-income and underinsured populations with the intent of increasing adherence with this screening method.

We selected the FIT test because it requires less patient preparation compared with FOBT. An evidence-based intervention developed by Dr. Michael Potter at the University of California at San Francisco (UCSF), the FIT/Flu combines the distribution of either FOBT or FIT tests with annual flu inoculations. The FIT test analyzes specific antibodies to human blood components, and thus does not require patients to follow any dietary or medication restrictions. The FIT-Flu intervention involves offering patients who undergo annual flu inoculations a stool test to take home and return via mail in a postage-paid envelope.

This intervention has demonstrated significant increases in screening adherence across diverse patient populations and settings. Study settings included community clinics that served multiethnic and low income populations with low baseline CRC screening rates, as well as retail chain pharmacies where flu shots are typically offered. In a study involving annual flu shot clinics, there was a significant increase in FIT adherence over baseline in the FIT-Flu intervention group (from 54.4% to 84.3%) versus a control group that received only CRC screening education (from 52.9% to 57.3%). More modest increases in adherence were achieved in a study involving primary care clinics, with the intervention group increasing from 32.5% to 45.5% versus the control group which rose from 31.3% to 35.6%.

The success of this intervention may be attributed to even this brief interaction between clinician and patient at the time of flu inoculation, as it offers a “teachable moment” to reinforce the need for regular screening. Studies provide consistent evidence that a FIT-Flu intervention is a practical strategy with high potential to increase CRC screening adherence in community clinic settings. Furthermore, evidence generated by these studies indicates a strong likelihood of successful replication in real world, non-controlled settings.

This project expands a currently ongoing two year FIT/Flu initiative in Federally Qualified Health Centers (FQHCs) in Harris County in other RHP3 counties. We will reach indigent and Medicaid patients, age 50 years and older, who, in accordance with the U.S. Preventive Services Task Force (USPSTF) recommendations, qualify for CRC screening. Our exclusion criteria include the following:

- Allergic to flu vaccine or refusal to receive a flu inoculation
- Active inflammatory bowel disease (Crohn’s, ulcerative colitis)
- Visible rectal bleeding
- Hematuria
- Menstruation at the time of obtaining a stool specimen
• A positive FOBT or FIT test in the past 12 months
• A colonoscopy or sigmoidoscopy within the past 5 years
• A medical condition that would preclude any benefit from OC (cancer or any terminal illness)
• Inability to prepare a stool specimen
• Patient with an ileostomy or colostomy
• Symptomatic acute colitis or acute diarrhea
• Recent acute diverticulitis
• Recent colorectal surgery

Patients in our project will receive a FIT with verbal and written instructions on how to complete the test, brief verbal messages reinforcing the importance of screening (e.g., “an annual FOBT (FIT) test is as important as an annual flu shot”), educational materials, and clinic phone numbers should questions arise. We anticipate receiving 50% return of stool specimens for processing, of which approximately 15% (published ranges of 8-14%) may be positive. Patients with positive FIT tests will be referred for optical colonoscopy. Endoscopy providers will be contracted to provide these services. Uninsured individuals diagnosed with cancer will be navigated to Harris Health Systems or other providers.

Goal(s) and Relationship to Regional Goal(s):

The goal of this project is utilize an evidence based approach in RHP3 FQHC clinics and other primary care offices to increase CRC screening and annual flu vaccination by distributing the take-home FIT test at the time of flu inoculation. Patient Navigators will follow-up those patients who do not return the FIT to encourage them to do so and will navigate those patients with positive FIT results to screening colonoscopy. Culturally sensitive educational and instructional materials will be distributed to increase patient knowledge about CRC and the importance of early screening. We will partner with the American Cancer Society (ACS) to offer professional education and support material to assist primary care physicians in providing appropriate CRC screening recommendations to their patient population.

Project Goals:

• Reduce the incidence and mortality of colorectal cancer in the indigent and Medicaid population through the increased use of a low-cost stool test for the early detection of adenomas and cancers.
• Increase target population’s knowledge about the risk factors and screening guidelines for CRC.
• Increase the use of appropriate CRC screening in the primary care setting.
• Increase annual flu vaccination.
• Increase patient returns for annual flu vaccination and CRC screening.

This project meets the following Region 3 goals:

• Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The FIT-Flu program aims to reduce the incidence and mortality of colorectal cancer by offering a process to dispense CRC screening in the primary care setting. This project will be implemented in FQHCs in RHP3 and is an extension of an existing program in Harris County FQHCs. This project does not receive funding from, nor does it advance any federal initiatives.
pertaining to, CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/ Hospital acquired infection) grants.

Challenges:

According to the Agency for Healthcare Research and Quality (AHRQ), only about half of all adults aged 50-75 have ever received age-appropriate colorectal cancer (CRC) screening, and the proportion of minority populations who have ever been screened is reported to be approximately 30%. The Texas Cancer Registry indicates that 44.5% of adults reported having sigmoidoscopy or colonoscopy in the past 5 years, and 14.1% reported annual FOBT. Various public education campaigns and strategies have been attempted to increase CRC screening rates in the underserved and underinsured populations, but poor adherence with stool tests, especially in the uninsured, remains a significant barrier to effective CRC screening.

Barriers to CRC screening reported by patients include practical issues such as being too busy, a lack of access to providers, the cost of the exam, being asymptomatic, embarrassment, and fear of finding polyps or cancer. Other important barriers to implementing CRC screening in primary care practice settings include patients’ lack of awareness of their risk for developing CRC and/or a lack of knowledge of screening options, particularly among poor and underserved populations. Incomplete follow-up of positive FOBT results is another issue, as primary care physicians often fail to recommend optical colonoscopy to patients with positive FOBT results.

The challenge of improving CRC screening adherence is even greater in large primary care practices, where time and resource limitations reduce the likelihood that physicians are able to adequately discuss CRC screening with their patients. In a study by Wolf, only 9% of age-eligible patients at thirty-one Federally Qualified Health Centers (FQHCs) received a CRC screening recommendation from their physician and only 7% were adherent to screening, primarily through FOBT. Difficulties cited include prioritization, time, resources, complexity of referral, and perceived acceptance of screening tests. This project will include a culturally sensitive educational program on CRC for patients, as well as professional training on the importance and appropriate use of CRC screening in a primary care setting.

5-Year Expected Outcome for Provider and Patients:

It is expected that this project in DY2 – DY5 would serve a total of 6,405 patients with 13,292 unique services:

- Increase the use of FIT as first-line CRC screening in the primary care setting.
- Increase patient knowledge regarding colorectal cancer incidence and available screening tools.
- Increase appropriate use of CRC screening modalities in primary care practice.

The breakdown is as follows:

- DY2: 100 provided FIT screening kits; 8 served with colonoscopy
- DY3: 2000 served with FIT screening; 150 served with colonoscopy
- DY4: 2100 provided FIT screening kits and flu vaccination; 158 served with colonoscopy
- DY5: 2205 provided FIT screening kits and flu vaccination; 166 served with colonoscopy

- Increase annual flu vaccination in primary care practice.
- DY2: 100 served with flu vaccination
o DY3: 2000 served with flu vaccination
o DY4: 2100 served with flu vaccination
o DY5: 2205 served with flu vaccination

- Increase patient compliance in return visits for flu vaccination and CRC screening through utilization of provider reminders.
  - DY4: 315 of the 2100 provided FIT screening kits and flu vaccination will be returning patients for annual services
  - DY5: 331 of the 2205 provided FIT screening kits and flu vaccination will be returning patients for annual services

**Starting Point/Baseline:**
There is a multi-county need as data from the 2010 Behavioral Risk Factor Surveillance indicates that in Public Health Administrative Region 6/5S, only 38.6% of adults 50 years and older reported having ever had a sigmoidoscopy or colonoscopy in the past 5 years, and 13.9% reported annual fecal occult blood testing. This is well below the ACS’ 2015 goal of 75% of all adults over 50 having a recent CRC screening test. Due to the seasonal offering of flu vaccination, the baseline of 100 will be established during one month distributing FIT tests at the time of flu vaccination in DY2.

**Rationale/Reason for selecting the program option:**
CRC screening has been shown to save lives. Screening prevalence is lower among people aged 50 to 64 compared to those 65 years and older, and is especially low among those who are non-white, who have fewer years of education, who lack health insurance coverage, and who are recent immigrants. The 2010 National Healthcare Quality and Disparities Report indicates that Hispanics/Latinos undergo CRC screening at rates lower than African Americans and Whites, and thus are at great risk for presenting with late-stage disease at diagnosis. Improving CRC screening in clinics serving indigent and Medicaid patients is a priority need, as these clinics are the primary source of care for a disproportionately high number of African American and Hispanic/Latino patients. Low levels of knowledge about this topic have been linked with inaccurate CRC risk perceptions and low utilization of screening services. The primary reason patients do not return FOBTs is that they do not believe they need screening if they have no symptoms of CRC. These data underscore the need to implement innovative screening strategies.

**Project Components:**
Through the FIT-Flu Program, we propose to meet all required project components listed below and believe that the selected milestones and metrics relate to the project components:
- Increase recommended CRC screening by means of an evidence based process to reach eligible patients unscreened for CRC and by offering professional education to assist primary care physicians in providing appropriate CRC screening recommendations to their patient population.
- Establish collaborative partnerships with community organizations to ensure culturally competent patient education materials are disseminated and evidence based health professional training is utilized.
• Educate patients on the risk factors and screening recommendations for CRC.
• Increase access to CRC screening.
• Conduct quality improvement using methods evaluate the ongoing effectiveness of the program.

Milestones & Metrics:
The following milestones and metrics have been chosen for the FIT-Flu Project based on the needs of the target population.

- Process Milestones and Metrics: P-7(P-7.1, P-7.2); P-X (P-X.1, P-X.2, P-X.3, P-X.4, P-X.5, P-X.6)
- Improvement Milestones and Metrics: I-X (I-X.1)
- Customizable Process Milestones and Metrics were chosen to specifically tailor their intent to the project process.

Unique community need identification number the project addresses:
The project addresses the following unique community needs, as identified in the community needs assessment:

- CN.2 Inadequate access to specialty care.
- CN.11 High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including cancer, diabetes obesity, cardiovascular disease, asthma, and AIDS/HIV.
- CN.20 Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs.
- CN.22 Insufficient access to services that are specifically designed to address racial, ethnic and cultural health disparities.
- CN.23 Lack of patient navigation, patient and family education and information programs.

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:
This project will expand an existing FIT/Flu initiative in Federally Qualified Health Centers (FQHCs) in Harris County, extending this project into other RHP3 counties not currently served by this initiative. Additionally, the existing Harris County project would be included in DY4 and DY5, extending this project an additional two years.

Related Category 3 Outcome Measure(s):
OD-12 Primary Care and Primary Prevention
IT-12.3 Colorectal Cancer Screening (HEDIS 2012)
  Numerator: The number of Medicaid and indigent adults aged 50 to 75 who receive one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, and colonoscopy every 10 years
  Denominator: The number of eligible Medicaid and indigent adults aged 50 to 75 in the patient or target population. Adults with colorectal cancer or total colectomy are excluded.

IT-12.6 Other Outcome Improvement Target: Flu vaccination status for adults age 50 – 75.
Numerator: Number of eligible Medicaid and indigent adults age 50 – 75 vaccinated for flu
Denominator: Number of Medicaid and indigent patients age 50 – 75 in patient population eligible for flu vaccination

IT-12.6 Other Outcome Improvement Target: Increase in adherence to annual flu vaccination and colorectal cancer screening guidelines in Medicaid and indigent population age 50 to 75
Numerator: Number of return Medicaid and indigent patients for annual flu and CRC screening
Denominator: Number of Medicaid and indigent patients reminded of annual screening and flu vaccination

Reasons/Rationale for selecting the outcome measure(s):
CRC can be curable if detected in its early stages, but often fatal when diagnosed later. According to the Surveillance, Epidemiology and End Results (SEER) Program, patients diagnosed with Stage 1 disease (localized to the bowel wall) have a 90.1% 5-year survival rate compared to those with Stage 4 disease (distant metastases) who have an 11.7% 5-year survival rate. Similar data are found in Texas with localized CRC showing an 88.1% 5-year survival and distant disease yielding a 13.2% 5-year survival. CRC screening has been shown to save lives. The United States Preventive Services Task Force (USPSTF) recommends the following CRC screening options for persons age 50-75 who are at average risk for the disease: (1) annual fecal occult blood testing (FOBT) using high-sensitivity stool guaiac tests or fecal immunochemical tests (FIT), (2) flexible sigmoidoscopy every 5 years plus FOBT or FIT every three years, or (3) optical colonoscopy every 10 years.

Morbidity and mortality from influenza are “potentially preventable” by utilization of annual influenza immunization through appropriate outpatient healthcare. In 2010, the Advisory Committee on Immunization Practices (ACIP) first recommended annual influenza vaccination for all persons aged ≥6 months in the United States and annual influenza vaccination of all persons aged ≥6 months continues to be recommended. Reminders inform health care providers it is time for a client’s cancer screening test and annual influenza immunization or that the client is overdue for screening. The reminders can be provided in different ways, such as in client charts or by e-mail. The Community Preventive Services Task Force recommends provider reminder systems based on strong evidence of their effectiveness in increasing adherence to annual screening recommendations.

Relationship to Other Projects:
This project reinforces and extends an existing colorectal screening project of the Colorectal Cancer Workgroup, which is one of eight focus areas in the Comprehensive Cancer Control initiative in the Houston MSA.

Relationship to Other Performing Providers’ Projects in the RHP:
The increase of primary care and specialty care will naturally result in additional ambulatory care encounters for our region patient base. The ambulatory initiatives cover items such as laboratory, PT/OT, social work, etc. and are a necessity of our patients to ensure a
comprehensive treatment for access as well as cost avoidance. The Region 3 initiative grid in the addendum reflects all ambulatory operations initiatives.

**Plan for Learning Collaborative:**
We will participate in face-to-face learning such as meetings or seminars with other providers and the RHP, at least twice per year to promote collaborative learning around shared or similar projects. At each face-to-face meeting, we will collaborate to identify performance improvements and will ensure that these suggested improvements will be incorporated into our project processes.

**Project Valuation:** We have based our project valuation on California’s 1115 Medicaid Waiver model. As such, we have valued our projects at 2.5 times that of the estimated costs. Basing our valuations on California’s calculations we know we are well within the potential range of future cost savings when looking at the following from Prevention Institute and Trust for America’s Health Issue Report entitled *Prevention for a Healthier America: Investments in Disease Prevention Yield Significant Savings, Stronger Communities (July 2008):*

- Prevention can reduce end-of-life costs by increasing health during the lifespan, what researchers call the *compression of morbidity*.
- There is a substantial return-on-investment in prevention – For every $1 invested in community-based prevention, the return amounts to $5.60.
### PROJECT TITLE: IMPLEMENT INNOVATIVE EVIDENCE-BASED STRATEGIES TO INCREASE APPROPRIATE USE OF TECHNOLOGY AND TESTING FOR TARGETED POPULATIONS (E.G., MAMMOGRAPHY SCREENS, COLONOSCOPIES, PRENATAL ALCOHOL USE, ETC.): COLORECTAL CANCER SCREENING PROGRAM FOR LOW-INCOME RESIDENTS OF RHP3

**Performing Provider Name:** The University of Texas MD Anderson Cancer Center

Metric 1 [P-X.1] Implement a recall system that allow staff to report which patients are due for annual CRC screening and flu vaccination and track when and how patients are notified.

a. Data Source: Documentation of recall report

b. Rationale/Evidence: The goal of this milestone is to make evidence-based care routine. This is accomplished through both planned interactions initiated by the practice, and through point-of-care reminders which help ensure that every interaction is informed by the clinical needs and wishes of the patient. This means that the availability of up-to-date patient information is key, as well as the care team’s ability to review patient data before the visit and communicate via team healthcare to encourage increased adherence to FIT/Flu guidelines in RHP 3 FQHCs and clinics.

Project Option 2.7.2 – Implement innovative evidence-based strategies to reduce tobacco use – Evidence-Based Smoking Cessation Program for Underserved Persons Living with HIV/AIDS

Unique RHP Project ID: 112672402.2.2
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Summary:
Provider: The University of Texas MD Anderson Cancer Center is a comprehensive cancer center ranked first in cancer care by *U.S. News & World Report* and dedicated to patient care, education, research and prevention. MD Anderson is comprised of several Texas Medical Center campus locations, two research campuses in Bastrop County, Texas, four regional care centers and a number of national and international divisions and affiliates. More than 108,000 people—almost one-third of them new patients—were seen in FY2011. MD Anderson provided $215 million in uncompensated charity care to Texans in FY2011.

Intervention(s): This project will implement an evidence-based smoking cessation program for persons living with HIV/AIDS at the Legacy Community Health Services sites. Legacy provides care to approximately 40,000 underserved individuals (including 4,000 individuals living with HIV/AIDS) at five clinic sites in the greater Houston area. Legacy is also a nationally recognized leader in HIV/AIDS care. Smoking represents the leading cause of preventable death among persons living with HIV/AIDS. By implementing procedures for routine smoking screening and offering an evidence-based smoking cessation program, this project will fill an important gap for the underserved population served by Legacy.

Need for the project:
- This project addresses Community Needs: CN.6: Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly; CN.11: High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including: cancer, diabetes, obesity, cardiovascular disease, asthma, and AIDS/HIV; CN.12 – High rates of tobacco use and excessive alcohol use.

- A wide range of studies have documented dramatically elevated rates of current smoking in HIV-positive populations, generally two to three times higher than the prevalence of smoking in the general population. Recent evidence indicates that smoking cessation among person with HIV could reduce the risk of overall mortality by almost 16%; reduce the risk of a major cardiovascular disease event by 20%; and reduce the risk of non-AIDS malignancies by 34%.

Target Population: One thousand patients living with HIV/AIDS will be enrolled in the smoking cessation program. While current smoking prevalence data are not available for the Legacy patient population, the estimated prevalence is 50%. This estimate is based on extensive existing literature documenting high smoking rates in this population. (Estimates range from 50 to 70%).

Category 1 or 2 expected patient benefits: The DY3 goal is to enroll 50% (n=500) of program eligible smokers into smoking cessation services. The DY4 goal is to enroll 50% (n=500) of program eligible smokers. The DY5 goal is to disseminate the cell phone smoking cessation intervention to HIV care centers located throughout the RHP.

Category 3 outcomes:
IT-11.6: Other Outcome Improvement Target (Quit Attempts) – 75% (n=750) of enrollees in the smoking cessation program will make a successful quit attempt.
- DY3: n=187 will make a successful quit attempt
- DY4: n=375 will make a successful quit attempt
- DY5: n=188 will make a successful quit attempt

**IT-11.6:** Other Outcome Improvement Target (Smoking Cessation/Staying Quit) – 25% of smokers (n=250) will be abstinent at the time of the 6-month follow-up
- DY3: n=62 will be abstinent at the time of the 6-month follow-up
- DY4: n=125 will be abstinent at the time of the 6-month follow-up
- DY5: n=63 will be abstinent at the time of the 6-month follow-up

**IT-11.3:** Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity (Screening for Cigarette Smoking) – 4000 HIV positive patients will be screened for current smoking
- DY3: n=2000 HIV positive patients will be screened for current smoking
- DY4: n=2000 HIV positive patients will be screened for current smoking
Project Option 2.7.2 – Implement innovative evidence-based strategies to reduce tobacco use - Evidence-Based Smoking Cessation Program for Underserved Persons Living with HIV/AIDS

Unique RHP Project Identification Number: 112672402.2.2
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Description:
The goal of the current proposal is to adapt, implement, and evaluate an evidence-based, cell phone-delivered smoking cessation treatment program targeted to low-income and underinsured individuals living with HIV/AIDS. The proposed smoking cessation project will involve a partnership with Legacy Community Health Services – a large, Federally Qualified Health Center (FQHC).

Program overview. In the first phase of our project, we will train Legacy staff to: 1) screen for current smoking, 2) identify eligible HIV+ smokers 3) offer smoking cessation treatment to eligible participants, and 4) administer the cessation intervention. Active recruitment will begin in phase 2. Participants who enroll in the program will meet with their HIV Case Manager and treatment materials (call calendar and nicotine replacement patches) will be dispersed. The final phase of the project will consist of follow-up assessment and dissemination to other HIV care centers in the RHP.

Treatment overview. Enrollees will be given brief advice to quit smoking and offered nicotine replacement therapy (NRT) in the form of nicotine patches. Enrollees will then receive a series of proactive telephone counseling sessions that will be conducted over a six month time period. This evidence-based treatment approach is based on the United States Public Health Service (USPHS) Guidelines and our previous work with HIV+ smokers.1-3 Extensive evidence supports the efficacy of NRT. We have chosen to use nicotine patches due to their ease of use and low risk of side effects. When combined with provider advice to quit smoking, NRT effectively doubles the odds of successfully quitting.2 For the phone counseling component, we have chosen to use the approach developed in our earlier clinical trial. Counseling session content is primarily drawn from cognitive-behavioral and motivational interviewing techniques. Importantly, content is tailored to the individual’s HIV status, and addresses HIV-specific issues.

Assessments, which will include smoking status measures, psychosocial measures, and process variables, will be conducted in the Legacy clinics at the time of program enrollment, and at 3- and 6-months post enrollment. After all program participants have completed the 6-month follow-up, a detailed program evaluation will be conducted.

Community Partner. For this project, we will partner with Legacy Community Health Services. Legacy provides care to approximately 40,000 underserved individuals (including 4,000 individuals living with HIV/AIDS) at five clinic sites in the greater Houston area. Legacy is also a nationally recognized leader in HIV/AIDS care. Providers (intake nurses and case managers/social workers) at the clinic sites will assist with screening and smoking cessation intervention delivery. We have a strong record of this type of collaboration as evidenced by our previous research initiatives at Thomas Street Health Center of the Harris Health System.
Goal(s) and Relationship to Regional Goals(s):

Aim 1: Adapt a previously developed smoking cessation treatment approach for use with Legacy Community Health Service’s HIV+ patient population.

*Our goal is to work with Legacy staff to adapt our proactive cell phone counseling intervention so that program implementation will minimize clinic flow disruption, while appealing to a majority of the target population. If successful, our program will be readily implemented, maintained, and administered by the Legacy clinic sites and, ultimately, disseminable to other HIV-care centers across the RHP.*

Aim 2: Implement an evidence-based smoking cessation program for persons living with HIV/AIDS at the Legacy clinic sites.

*Our goal is to screen, enroll, and provide smoking cessation treatment (consisting of brief provider advice to quit, nicotine replacement therapy, and proactive phone counseling) to 1000 smokers receiving HIV care at the 5 Legacy clinic sites.*

Aim 3: Evaluate the effectiveness of the smoking cessation program implemented at Legacy.

*Our goal is to evaluate the following:

- **Reach** of the smoking cessation program - defined as the proportion of identified HIV-positive smokers who enroll in the program.
- **Efficacy** of the program - defined as the proportion of smokers who successfully quit smoking.
- **Implementation** of the program – defined as: 1) proportion of Legacy patients screened for program eligibility; 2) proportion of scheduled counseling calls completed by Case Managers; 3) dose of counseling treatment per participant (proportion of scheduled calls); and 4) dose of nicotine replacement therapy (NRT) per participant (proportion of NRT patches used).
- **Costs** – cost analysis, cost-effectiveness analysis, and cost utility analysis of the treatment program will be performed.*

Regional Goal. This proposed project is responsive to the first regional goal, “Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health outcomes and patient satisfaction.” At the present time, Legacy Community Health Services (an FQHC providing care to the underserved population in the greater Houston area) does not systematically screen smoking status, or offer smoking cessation services. Thus, the proposed project will fill an important gap. An existing evidence-based treatment will be offered to HIV+ smokers, while non-HIV+ positive smokers will be referred to the Texas Quitline. Moreover, the treatment provided to the HIV+ smokers will be administered through the HIV Case Management service already in place at Legacy.

Challenges:

Major challenges of the project include the following: 1) obtaining buy-in from staff at Legacy, 2) overcoming barriers to smoking cessation treatment, and 3) offering a sustainable program. We have carefully considered each of these challenges in the design of the project. First, buy-in will be facilitated by the support we have already received from Legacy Leadership. Specifically, Dr. Richard Beech, Chief Medical Officer, strongly supports this program and is fully committed to our initiative. Also, a key collaborator on this project, Dr. Leonard Zwelling, Professor, Experimental Therapeutics at MD Anderson Cancer Center serves on the Board of Directors at Legacy. Thus, he will be able to facilitate communications between project investigators and
Legacy leadership. Second, the design of the project itself overcomes many barriers to treatment commonly experienced by underserved HIV+ smokers. Key program elements, such as use of cell phones for treatment delivery, use of NRT (vs. other medications), and eliminating extra clinic visits, are each designed to minimize barriers, potential hazards, and overall participant burden. Third, a crucial component of the project is the training of case managers to deliver and administer the cessation program. Thus, the personnel resources will remain after the funding for the program ends. In addition, the program will ultimately be appropriate for a large number of HIV care centers.

5-Year Expected Outcome for Provider and Patients:
We believe our program will result in: 1) enhanced screening for smoking, 2) promote the delivery of evidence-based smoking cessation treatment, 3) promote quit attempts among participants receiving treatment, 4) reduce the prevalence of current smoking, and ultimately 5) reduce morbidity and mortality of smoking-related malignancies in the HIV-positive population.

Starting Point/Baseline: Patients will be recruited from the population of individuals receiving care at the Legacy Community Health Services, a Federally Qualified Health Center with a national reputation as a leader in HIV/AIDS prevention and treatment. Legacy provides care to approximately 40,000 patients, including more than 4,000 persons living with HIV/AIDS. Currently, smoking status is not systematically assessed, nor is cessation treatment offered. The HIV+ patient population is racially/ethnically diverse (33% Black/African American; 33% White; and 26% Hispanic). Approximately 70% of the patients are male, and 78% are between the ages of 25 and 54 years. Finally, 47% of the population is gay or bisexual and 44% are heterosexual.

We plan to enroll 1000 patients in the smoking cessation program. While current smoking prevalence data are not available for the Legacy patient population, we estimate a prevalence of 50%. This estimate is based on the extensive existing literature documenting high smoking rates in this population (estimates ranging from 50 to 70%),4-8 as well as anecdotal reports from Legacy clinic staff (“at least 50% of the patients smoke”). We estimate, conservatively, that 50% of the HIV/AIDS patients screened at the Legacy clinics will be current smokers (that is 2000 of the 4000 HIV+ patients treated at Legacy). We would, therefore, need to enroll approximately 50% of these patients to reach our target of 1000. Given our ability to consistently enroll approximately 66% of smokers in our previous and ongoing studies with HIV+ smokers, a goal of 50% in the proposed program is readily achievable. In addition, non-HIV positive smokers will be referred to the Texas Quitline.

Rationale:
Cigarette smoking among persons living with HIV/AIDS represents a significant public health problem. A wide range of studies have documented dramatically elevated rates of current smoking in HIV-positive populations, generally two to three times higher than the prevalence of smoking in the general population.4,6-8 Recent evidence indicates that smoking cessation among persons with HIV could reduce the risk of overall mortality by almost 16%; reduce the risk of a major cardiovascular disease event by 20%; and reduce the risk of non-AIDS malignancy by 34%.9 Despite the high prevalence of current smoking and the substantial health benefits offered by smoking cessation treatment, surprisingly few efforts to deliver cessation treatment to this population appear in the literature.10
In previous efforts, Dr. Vidrine and colleagues have developed and performed efficacy assessments of behavioral interventions consisting of proactive cell phone-delivered smoking cessation counseling for HIV+ smokers. Findings from these efforts indicate that this treatment approach significantly increases abstinence rates over usual care (see preliminary evidence section) in the HIV-positive population. Despite the positive findings, much room for program dissemination and treatment improvement exists.

Several key factors were considered in the design of the proposed smoking cessation program. First, the proposed intervention (brief advice to quit, proactive cell phone counseling + NRT) builds on a solid, evidence-based foundation. This intervention has yielded positive results in earlier studies targeting underserved persons with HIV. Moreover, the efficacy of proactive phone counseling interventions and NRT have been extensively established in the general population. Second, the proposed intervention successfully overcomes many barriers to other interventions. For example, barriers such as limited transportation, housing instability, treatment costs, lack of landline/internet access, and limited literacy will not prevent participation in the proposed program. Finally, we have chosen to offer NRT as a component of the treatment. NRT is effective and offers several advantages over other potential pharmacotherapies (i.e., bupropion and varenicline), including fewer potential interactions with antiretroviral medications and less risk of psychiatric side effects. NRT is also available at no (or greatly reduced) cost to Legacy patients.

**Project Components:**
We believe our program will result in: 1) enhanced screening for smoking [P-X], 2) promote the delivery of evidence-based smoking cessation treatment [P-2], 3) promote quit attempts among participants receiving treatment [P-X], 4) reduce the prevalence of current smoking [IT-11.1], and ultimately 5) reduce morbidity and mortality of smoking-related malignancies in the HIV-positive population [IT-11.6, IT-11.3].

**Milestones & Metrics:**
The following milestones and metrics have been chosen for the Smoking Cessation Program for Underserved Persons Living with HIV/AIDS:
- Process Milestones and Metrics: P-X (P-X.1, P-X.2); P-1 (P-1.1); P-2 (P-2.1); P-3 (P-3.1); P-7 (P-7.1, P-7.2)
- Improvement Milestones and Metrics: I-5 (1-5.1); OD-11 (IT-11.1, IT-11.6, IT-11.3)

**Unique community need identification number the project addresses:**
The project addresses the following unique community needs as identified in the community needs assessment:
- CN.6 – Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly
- CN.11 – High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including: cancer, diabetes, obesity, cardiovascular disease, asthma, and AIDS/HIV
- CN.12 – High rates of tobacco use and excessive alcohol use

**How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:**
An innovative component of our program is the use of case managers as program stakeholders. HIV case management is a client-focused process that delivers, expands, and coordinates
services to clients. Generally stated, the ultimate goal of HIV case management is to help patients achieve better levels of physical, emotional, and social functioning. The literature indicates that HIV case management can result in a number of improved health outcomes, particularly for individuals with complex health care needs, including improved quality of life. Therefore, offering smoking cessation counseling fits well within the mission of the case management discipline. In addition, input from clinical staff at Legacy indicated that an intervention that utilizes the already established case management service would be ideal. Finally, because case management is available in most HIV clinics, our approach may have higher dissemination potential than alternative approaches. For example, The Ryan White Care Act currently provides funding to more than 2500 organizations, and case management services to more than 500,000 HIV-positive individuals.

**Related Category 3 Outcome Measure(s):**

**IT-11.6:** Other Outcome Improvement Target (Quit Attempts) – 75% (n=750) of enrollees in the smoking cessation program will make a successful quit attempt

- DY3: n=187 will make a successful quit attempt
- DY4: n=375 will make a successful quit attempt
- DY5: n=188 will make a successful quit attempt

**IT-11.6:** Other Outcome Improvement Target (Smoking Cessation/Staying Quit) – 25% of smokers (n=250) will be abstinent at the time of the 6-month follow-up

- DY3: n=62 will be abstinent at the time of the 6-month follow-up
- DY4: n=125 will be abstinent at the time of the 6-month follow-up
- DY5: n=63 will be abstinent at the time of the 6-month follow-up

**IT-11.3:** Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity (Screening for Cigarette Smoking) – 4000 HIV positive patients will be screened for current smoking

- DY3: n=2000 HIV positive patients will be screened for current smoking
- DY4: n=2000 HIV positive patients will be screened for current smoking
- DY5: n=2000 HIV positive patients will be screened for current smoking

**Reasons/rationale for selecting the outcome measure(s):**

Several important factors support our choice of OD-11 as our category 3 outcome domain. First, HIV/AIDS is among the conditions with the greatest disparities in health services and quality. Education, income, and employment status, along with race/ethnicity have been identified as important independent predictors of HIV/AIDS status. For instance, AIDS incidence and mortality are disproportionately high among African American and Hispanic individuals. African Americans and Hispanics account for approximately one quarter of the total U.S. population; however, these same two groups account for more than two thirds of the reported cases of AIDS. This translates to a rate among African Americans that is more than 8 times higher than the rate for whites, and the rate for Hispanics is 3 times higher compared to whites. Therefore, reducing the disproportionate impact of HIV/AIDS among traditionally underserved populations and improving health outcomes for people living with HIV/AIDS are national priorities.

A second important consideration is high prevalence of current smoking among people living with HIV/AIDS. Numerous reports describing dramatically elevated rates of smoking (40-70%) in this special population appear in the scientific literature. There are several characteristics that are known to be associated with both smoking status and HIV serostatus. Education level, income, and employment status have been identified as important independent predictors of both HIV/AIDS and smoking status. Certain behavioral and psychosocial
variables (e.g., sexual orientation, heavy alcohol consumption, illicit drug use, and depressive symptoms) are also associated with both smoking status and HIV/AIDS. While smoking is a hazardous behavior for all populations, HIV+ individuals appear to be particularly susceptible to the adverse health effects of tobacco use. In addition to increasing the risk of various pulmonary conditions and oral infections, smoking significantly elevates the risk of cancer among individuals with HIV. For example, anal, cervical, and lung cancers are observed significantly more often among HIV+ smokers compared to nonsmokers.

Despite the high prevalence of smoking and the increased risk of numerous adverse health outcomes, efforts to deliver cessation treatment to persons living with HIV/AIDS are rare. In fact, our community partner for the proposed project serves one of the largest HIV+ patient populations in the state, yet currently has no smoking cessation program available to these patients. Therefore, offering an evidence-based cessation program presents the potential to reduce smoking prevalence in the Legacy patient population, resulting in fewer smoking-related diseases and poor health outcomes.

Relationship to Other Projects: By delivering an evidenced-based smoking cessation program to the underserved population of HIV+ smokers at Legacy Community Health Services, this program is in line with the RHP. This project also supports our other projects in that they all support one of the eight goals of the Comprehensive Cancer Control Program at The University of Texas MD Anderson Cancer Center.

Relationship to Other Performing Providers’ Projects in the RHP: Innovation is key to the transformation of healthcare in our community. The consistency of innovation in our region allows for increased improvements based on research trends, patient need, and provider availability. The waiver funding allows for innovation in specific areas and all innovative projects included in the plan are similar in the fact of program redesigns for historic treatments, and focus to chronic condition outcome measures such as central line infections. The Region 3 initiative grid in the addendum can provide a side by side comparison of all projects that directly relate to innovation.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

Project Valuation: We have based our project valuation on California’s 1115 Medicaid Waiver model. As such, we have valued our projects at 2.5 times that of the estimated costs. Basing our valuations on California’s calculations we know we are well within the potential range of future cost savings when looking at the following from Prevention Institute and Trust for America’s Health Issue Report entitled Prevention for a Healthier America: Investments in Disease Prevention Yield Significant Savings, Stronger Communities (July 2008):

- Prevention saves money – an investment of $10 per person per year in programs to increase physical activity, improve nutrition, and prevent tobacco use could save the country more than $16 billion in annual health care costs within five years.
• Prevention can reduce end-of-life costs by increasing health during the lifespan, what researchers call the *compression of morbidity*.

There is a substantial return-on-investment in prevention – For every $1 invested in community-based prevention, the return amounts to $5.60.
### Project Title: Implement innovative evidence-based strategies to reduce tobacco use - Evidence-Based Smoking Cessation Program for Underserved Persons Living with HIV/AIDS

**Milestone 1 [P-X]**

**Metric [P-X.1]:** Develop a detailed manual of procedures.

**Baseline/Goal:** Baseline - Currently, smoking cessation is not documented systematically. Goal – Work with staff at Legacy to produce a detailed manual of procedures to standardize the assessment and documentation of smoking status.

**Data Source:** Completed manual of procedures

**Milestone 6 [P-2]:** Implement evidence-based innovative project for targeted population

**Metric [P-2.1]:** Document implementation strategy and testing outcomes; Enroll and deliver treatment to 50% (n=500) of eligible HIV+ smokers screened at Legacy.

**Baseline/Goal: 0/500**

Baseline- Presently, Legacy does not offer a smoking cessation program. Goal - We will enroll 50% (n=500) of the eligible smokers screened.

**Data Source:** Primary data collection to be recorded in medical records and program databases.

**Rationale:** These efforts will help to solidify all aspect of the smoking cessation treatment program. Specifically, these efforts will solidify the integration of screening, enrollment, treatment, follow-up, data collection, and date transfer.

**Milestone 6 Estimated Incentive Payment:** $609,637.00

**Milestone 7 [P-7]:** Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year

**Milestone 8 [P-2]:** Implement evidence-based innovative project for targeted population

**Metric [P-2.1]:** Document implementation strategy and testing outcomes; Enroll and deliver treatment to 50% (n=500) of eligible HIV+ smokers screened at Legacy.

**Baseline/Goal: 500/500**

Baseline – It is estimated that 500 participants will be enrolled in the smoking cessation program at the beginning of DY4. Goal - We will enroll 50% (n=500) of the eligible smokers screened by the end of DY4.

**Data Source:** Primary data collection to be recorded in medical records and program databases.

**Rationale:** These efforts will help to solidify all aspect of the smoking cessation treatment program. Specifically, these efforts will solidify the integration of screening, enrollment, treatment, follow-up, data collection, and date transfer.

**Milestone 8 Estimated Incentive Payment:** $318,950.00

**Milestone 9 [P-3]:** Execution of learning and diffusion strategy for testing, spread and sustainability

**Metric [P-3.1]:** Document the dissemination of cell phone smoking cessation intervention; Disseminate the cell phone smoking cessation intervention to HIV care centers located throughout the RHP.

**Baseline/Goal: 0/5**

Baseline - Presently, we are unaware of any HIV care centers in the region that systematically screen for smoking and offer treatment. Goal - we will reach out to other HIV care centers (n=5) providing medical care to underserved populations across the region. We will offer training and assistance with the cessation program implementation.

**Data Source:** previous developed training materials, procedures, treatment materials, and program databases.

**Rationale:** Smoking among underserved patients with HIV/AIDS represents the leading cause of mortality. The effort to target this growing population with tailored and

**Baseline/Goal:** Our previously developed cell phone delivered cessation treatment will serve as the baseline. Our goal is to adapt and further develop this program for use with Legacy patients.

**Data Source:** Input from Legacy staff, project investigators, and the scientific literature.

**Rationale:** It is vital that we work closely with Legacy staff on the smoking cessation treatment manual. This effort will ensure that 1) the content areas addressed are appropriate and 2) the time needed to deliver the intervention is feasible.

**Milestone 1 Estimated Incentive Payment:** $245,896.60

**Baseline/Goal:** 0/2 per year

**Data Source:** Documentation of semiannual meetings including meeting agendas, slides from presentations, and/or meeting notes.

**Rationale:** These meetings will help to improve our efforts to efficiently reach and treat our target population of HIV positive smokers.

**Milestone 2 [P-1]: Development of innovative evidence-based project for targeted population**

**Metric [P-1.1] Document innovative strategy and plan; Finalize treatment components e.g., smoking cessation treatment manual.**

**Baseline/Goal:** 0/2 per year

**Data Source:** Documentation of semiannual meetings including meeting agendas, slides from presentations, and/or meeting notes.

**Rationale:** These meetings will help to improve our efforts to efficiently reach and treat our target population of HIV positive smokers.

**Milestone 3 [P-2]: Implement the “raise the floor” improvement initiatives established at the semiannual meeting.**

**Baseline/Goal:** 0/Goal of 100% of agreed upon improvement initiatives

**Milestone 4 [P-7]: Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around shared or similar projects.**

**Baseline/Goal:** 0/Goal of 100% of agreed upon improvement initiatives

**Data Source:** Documentation of semiannual meetings including meeting agendas, slides from presentations, and/or meeting notes.

Project Option 2.7.2 – Implement innovative evidence-based strategies to reduce tobacco use – Multimedia Tools and Community Engagement for Youth Early Tobacco Prevention and Cessation

Unique RHP Project ID: 112672402.2.3
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Summary:
Provider: The University of Texas MD Anderson Cancer Center is a comprehensive cancer center ranked first in cancer care by *U.S. News & World Report* and dedicated to patient care, education, research and prevention. MD Anderson is comprised of several Texas Medical Center campus locations, two research campuses in Bastrop County, Texas, four regional care centers and a number of national and international divisions and affiliates. More than 108,000 people—almost one-third of them new patients—were seen in FY2011. MD Anderson provided $215 million in uncompensated charity care to Texans in FY2011.

Intervention(s): The centerpiece of the proposed project will be our evidence-based program ASPIRE (A Smoking Prevention Interactive Experience) which will be updated for contemporary youth while retaining its theoretical underpinnings and key modules. ASPIRE will be utilized to reach Medicaid eligible/indigent youth at various access points in RHP3 counties. Youth will be exposed to multilingual, culturally relevant anti-tobacco messages using electronic, digital and print media. Youth tobacco users and nonusers will join in the initiative and be exposed to five modules of tobacco prevention and cessation education. The clinical component of the project will involve recruiting and training RHP 3 providers who work with Medicaid patients to consistently screen adolescents and families for tobacco use, employing a carbon monoxide breath test for those ages 11 to 18, advising patients to adopt a nonsmoking lifestyle, referring patients proactively with links to the evidence-based ASPIRE program. The program’s smoking related goals and objectives will be achieved by offering the following activities: educating youth by engaging them in ASPIRE, training providers about addressing family tobacco use, using social media to help raise the public’s awareness of the addictiveness and dangers of tobacco. The source of advice delivered about cessation will be used from the 2008 Update for Treating Tobacco Use and Dependence. This approach recommends clinicians implement a series of counseling steps, referred to as the 5 As (ask, advise, assess, assist, and arrange). In the child health care setting, provision of the cessation advice would apply to relevant parents, children over 11 years of age, and adolescents in the clinical setting. The 5 As include asking, identifying, and documenting tobacco use at every visit. If identified, providers are to advise each smoker to quit using a “clear, strong, and personalized manner.” Another shorter technique will also be recommended for delivery. This technique can require a minute of time with patients in the providers’ office using the 3 As (asking, advising, and referring) to resources to meet the patients’ needs for tobacco prevention and cessation.

This project does not receive funding from nor does it advance any federal initiatives pertaining to CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/ Hospital acquired infection) grants.
Need for the project:

- This project addresses Community Needs in RHP3: CN.11—High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including: cancer, diabetes, obesity, cardiovascular disease, asthma, and AIDS/HIV; CN.12—High rates of tobacco use and excessive alcohol use; CN.20—Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs; CN.22—Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities; CN.23—Lack of patient navigation, patient and family education and information programs.

- In the state of Texas, over one third of students use tobacco products and at least two thirds of middle and high school students reported they were not exposed to anti-smoking messages.

- The crucial necessity of tobacco prevention among youth is dictated by the following major conclusions of the 2012 Report of the Surgeon General entitled, *Preventing Tobacco Use Among Youth and Young Adults*:
  1. Cigarette smoking by youth and young adults has immediate adverse health consequences, including addiction, and accelerates the development of chronic diseases across the full life course.
  2. Prevention efforts must focus on both adolescents and young adults because among adults who become daily smokers, nearly all first use of cigarettes occurs by 18 years of age (88%), with 99% of first use by 26 years of age.
  3. Advertising and promotional activities by tobacco companies have been shown to cause the onset and continuation of smoking among adolescents and young adults.
  4. After years of steady progress, declines in the use of tobacco by youth and young adults have slowed for cigarette smoking and stalled for smokeless tobacco use.
  5. Coordinated, multi-component interventions that combine mass media campaigns, price increases including those that result from tax increases, school-based policies and programs, and statewide or community-wide changes in smoke-free policies and norms are effective in reducing the initiation, prevalence, and intensity of smoking among youth and young adults.

- This project aims to reduce smoking initiation and facilitate smoking cessation among the vast majority of the aforementioned youth (i.e., ages 11 through 18 years). Importantly, it will address tobacco use among the most vulnerable low-income groups of youth who are Medicaid eligible/indigent being served by RHP3 clinics and schools, involving health professionals in sustainable activities that will lead to a dramatic reduction of tobacco use among the target population.

**Target Population:** Beginning in DY 3, 5% of Medicaid eligible/indigent participants will be recruited from Harris, Austin, and Colorado counties. In DY4 to DY 5, 5% of Medicaid eligible/indigent participants will be enrolled from Fort Bend, Chambers, and Matagorda counties. In DY 5, we will begin enrolling Medicaid eligible/indigent youth from Calhoun, Waller, and Wharton counties. The facilities targeted for provider training will be clinics, school-based student health clinics and schools. The schools will be utilized to increase reach and reinforce clinical activity among this population. All estimated figures are conservative.
Category 1 or 2 expected patient benefits:
- The baseline for DY2 is 4100 participants who have engaged in the evidence-based innovative ASPIRE program in Harris County.
- The DY3 goal is to enroll an estimated 5% of Medicaid-eligible/indigent participants from Harris, Austin, and Colorado counties, an estimated (n = 12,500 youth).
- The DY4 goal is to enroll 5% of Medicaid-eligible/indigent participants from Fort Bend, Chambers, and Matagorda counties, an estimated (n=2400).
- The DY5 goal is to enroll an estimated 5% of adolescents from Calhoun, Waller and Wharton counties (n=350).

Category 3 outcomes:
The three outcomes selected for this project will be three standard smoking-related outcomes from the literature as follows:

**IT-11.6:** Other Outcome Improvement Target (Reduction of Susceptibility to Tobacco) – Reduce susceptibility to tobacco usage among adolescents aged 11 to 18 years of age. A 3% reduction of participants susceptible to tobacco (n=100) will not initiate smoking at the time of follow-up.

**IT-11.6:** Other Outcome Improvement Target (Quit Attempts, participants refraining from using tobacco for at least 24 hours or longer, but does not result in quitting for an extended period of time). 30% of enrollees who smoke (n=600) will make a successful quit attempt.

**IT-11.6:** Other Outcome Improvement Target (Smoking Cessation/Staying Quit, being abstinent at follow-up). 10% of enrollees who smoke (n=200) will be abstinent at the time of follow-up.
Project Option 2.7.2 - Implement innovative evidence-based strategies to reduce tobacco use - Multimedia Tools and Community Engagement for Youth Early Tobacco Prevention and Cessation

Unique Project ID: 112672402.2.3
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Description:
Tobacco is the number one preventable cause of death from cancer and other diseases. Nearly all tobacco use begins during the teenage years. Low-income, underserved youth are at highest risk for becoming tobacco users. For these reasons, we will target individuals aged 11 to 18 years and propose a tobacco prevention and cessation initiative utilizing multimedia resources as well as an extensive community network.

The program would prevent smoking initiation and facilitate cessation among those attending middle- and high-schools as well as for those youth attending office-based clinical encounters. Our evidence-based online tobacco program ASPIRE (A Smoking Prevention Interactive Experience) is free to the public and sustainable. It will serve as the primary resource for this project. ASPIRE will be utilized to reach Medicaid eligible/indigent youth at various access points in Regional Health Partnership (RHP) 3 counties. Youth will be exposed to multilingual, culturally relevant anti-tobacco messages using electronic, digital and print media. By the end of year 5 we anticipate enrolling more than 15,250 adolescents in RHP3 counties into the ASPIRE program. According to the US Bureau of the US Census, the total estimated number of youth aged 11 to 18 years in RHP3 is approximately 1.3 million. We estimated that at least 25% of these adolescents are Medicaid eligible/indigent (about 305,500). Then we estimated that 5% of these low income adolescents (15,250) will enroll in this project (connecting to ASPIRE and/or introduced by providers during clinical encounters). According to results from the 2002 to 2008 National Surveys on Drug Use and Health, approximately 13% are current smokers (varies by age, gender, ethnicity and other factors). The estimated number of participants for this project is based on the aforementioned data source.

This project does not receive funding from nor does it advance any federal initiatives pertaining to CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/ Hospital acquired infection) grants.

Goal(s) and Relationship to Regional Goal(s):
This project will influence knowledge, attitudes, and perceptions of young people about tobacco products. If participants are smokers they will be encouraged to make quit attempts and sustained cessation. Receipt of ASPIRE’s health education, in turn will lead to reduced consumption of tobacco products and incidence of tobacco-related disease among participants, thereby increasing the future health and wellbeing of Region 3 adolescents.

This initiative will employ a range of activities and services to include: provider/educator training, youth engagement through school-based events, social networking/online advertising, and other group activities; community outreach with incentives/contests around national anti-
tobacco events, youth education and counseling (including expectant teen mothers), and parental/family and community involvement. Furthermore, our concept will require the involvement of clinics (e.g., prenatal, family planning, STD, WIC) and middle- and high-schools. Examples of providers include: health care providers, administrative and educational personnel in schools. The source of clinical advice delivered about cessation will be referenced from the 2008 Update for Treating Tobacco Use and Dependence. This approach recommends clinicians implement a series of counseling steps, referred to as the 5 As (ask, advise, assess, assist, and arrange). Provision of the cessation advice would apply to relevant parents, children over 11 years of age, and adolescents in the clinical setting. The 5 As include asking, identifying, and documenting tobacco use at every visit. If identified, providers are to advise each smoker to quit using a “clear, strong, and personalized manner.” Another shorter delivery technique will also be recommended. This technique can require a minute of time with patients in the providers’ office using the 3 As (asking, advising, and referring) to resources to meet the patients’ needs for tobacco prevention and cessation.

This project meets the following regional goals:

- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.
- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.

Challenges:
A main challenge will be the recruitment and retention of youth (i.e., maintaining their interest, motivation and commitment to the program). Secondarily, technology can pose its own challenges (e.g. glitches, bandwidth, software compatibility, etc.). Another challenge is related to the consistency of ASPIRE implementation among our partners. These obstacles can be successfully addressed by the implementation team. They have considerable experience in working with young, disadvantaged populations and intervention delivery. The director of this initiative, Dr. Alex Prokhorov has 30 years of experience in preventing youth tobacco use among underserved populations. We plan to also leverage the expertise of other collaborators. Dr. Vidrine possesses expertise in technology-based tobacco cessation intervention program creation and implementation among low-income populations. Dr. Karen Calabro works in anti-tobacco health education and research in young populations. We will collaborate with Salma Marani (biostatistician for various tobacco and youth studies), and Lauren McCoy (health marketing/communications professional). Another strategic advantage for this initiative is the provision of resources that can compensate both individual participants and member partners (i.e., furnishing computer resources to facilitate youth viewing of ASPIRE within partner facilities).

5-Year Expected Outcome for Provider and Patients:
1. Enroll 5% of Medicaid-eligible/indigent youth from an estimated (n = 15,250 total youth) across the RHP3 counties. The approach selected for enrolling participants is planned to be operationalized by recruiting in blocks of three counties annually.
o DY3: We will enroll an estimated 12,500 youth from Harris, Austin, and Colorado counties.

o DY4: We will expand the operation to reach the Fort Bend, Chambers, and Matagorda counties enrolling 2,400 youth.

o DY5: We will expand the operation extending into Calhoun, Waller, and Wharton where we expect to enroll an estimated 350 youth.

2. Reduce susceptibility to tobacco use by 3% (n = 100) among 3150 susceptible to tobacco across the RHP3 counties. Annual estimates for reducing susceptibility:
   o DY3: 70 youth
   o DY4: 15 youth
   o DY5: 15 youth

3. Increase quit attempts among program participants for 24 hours within the estimated group of 1,980 smokers by 30% (n = 600). Numbers of quit attempts for each year are:
   o DY3: 420 smokers
   o DY4: 90 smokers
   o DY5: 90 smokers

4. Increase sustained cessation among the estimated 1980 smokers in RHP3 by 10% (n = 200). Estimates of numbers of smokers not smoking at follow-up (sustained quitters) for each year are:
   o DY3: 100 smokers
   o DY4: 50 smokers
   o DY5: 50 smokers

5. Train and equip providers within clinics including dental clinics serving Medicaid-eligible/indigent youth in RHP3 and schools to offer anti-tobacco counseling and cessation resources. Counties covered for each year are:
   o DY3: Harris, Austin, and Colorado counties
   o DY4: adding Fort Bend, Chambers, and Matagorda counties.
   o DY5: adding Calhoun, Waller, and Wharton

**Starting Point/Baseline:**
The ASPIRE initiative is an existing program with widespread reach. Within the Houston area, 4,100 adolescents are engaged in ASPIRE or have been exposed to ASPIRE (year-to-date from 2008 to August 2012).

**Rationale:**
Project Option 2.7.2 was selected because ASPIRE is an evidence-based program proven to reduce the uptake of tobacco use among underserved teenagers at highest risk for smoking initiation.

In the state of Texas, over one third of students use tobacco products and at least two thirds of middle and high school students reported they were not exposed to anti-smoking
messages. Concurrently, youth are known to be heavy users of technology. For these reasons we will specifically focus on reaching underserved youth within RHP3 counties using a technology-based program that is evidence-based for high-risk adolescents. ASPIRE was tested among inner-city youth in urban Houston high schools. ASPIRE proved to be effective in preventing smoking initiation. The program is used by adolescents in counties within Texas, is easily accessible via the Internet and is available at no cost to users. Additional funding will allow us to enhance the sustainability of ASPIRE and to offer better incentives for broader program participation. Additionally, the ASPIRE program can be easily implemented as it is self-directed for the students.

**Project Components:**
The activities of this initiative include efforts to train providers and community partners to consistently refer adolescents to tobacco prevention and tobacco cessation resources, which can lead to widespread delivery of tobacco prevention services in the RHP3 counties [P-6; IT-11.6]. The facilities targeted for provider training will be school-based student health clinics, community clinics and schools that serve Medicaid eligible/indigent youths. The source of advice about cessation delivery to be used will be from the 2008 Update for Treating Tobacco Use and Dependence. This approach recommends clinicians implement a series of counseling steps, referred to as the 5 As (ask, advise, assess, assist, and arrange). In the health care setting, provision of the cessation advice would apply to relevant parents, children over 11 years of age, and adolescents in the clinical setting. The 5 As include asking, identifying, and documenting tobacco use at every visit. If identified, providers are to advise each smoker to quit using a “clear, strong, and personalized manner.” Another shorter technique will also be recommended for delivery. This technique can require a minute of time with patients in the providers’ office using the 3 As (asking, advising, and referring) to resources to meet the patients’ needs for tobacco prevention and cessation.

**Milestones & Metrics:**
The following milestones and metrics were selected for the ASPIRE youth tobacco use prevention and cessation project based on the needs of the target population:

- Process Milestones and Metrics: P-1 (P-1.1); P-2(P-2.1), P-7 (P-7.1)
- Improvement Milestone and Metric: I-X (I-X.1)

**Unique community need identification number the project addresses:** The project addresses the following unique community needs identified in the Region 3 community needs assessment:
- CN.11- High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including
  - Cancer
  - Diabetes
  - Obesity
  - Cardiovascular disease
  - Asthma
  - AIDS/HIV
• CN.12 - High rates of tobacco use and excessive alcohol use
• CN.20 - Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs
• CN.22 - Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities
• CN.23 - Lack of patient navigation, patient and family education and information programs.

How the project represents a new initiative for the Performing Provider or significantly enhances an existing deliver system reform initiative:
Currently, there is no evidence-based tobacco prevention and cessation program that is available to teens in RHP3 counties at no cost to participants. This initiative will not only introduce this culturally-tailored resource to Medicaid-eligible/indigent adolescents, but also provide access to tobacco education in support of positive health outcomes. From 2008 to 2012 we had success in reaching 4100 diverse, low income participants in Harris County. During DY3 to DY5, we also plan to have bi-annual meetings with other RHP providers to contribute to the sharing of ideas and identifying best practices for the region.

Related Category 3 Outcome Measure(s):
• IT-11.6: Other Outcome Improvement Target (Reduction of Susceptibility to Smoking) – Reduce susceptibility to tobacco usage among adolescents aged 11 to 18 years of age among 3% of enrollees. In absolute numbers this will be (n = 100 of 3,150 youth) susceptible to tobacco use will not initiate smoking at the time of follow-up
• IT-11.6: Other Outcome Improvement Target (Quit Attempts) – an estimated 30% of enrollees (n = 600 of 1,980 smokers) will make at least one quit attempt.
• IT-11.6: Other Outcome Improvement Target (Smoking Cessation/Staying Quit) – an estimated 10% of enrollees who smoke (n = 200 of 1,980 smokers) will be abstinent at the time of follow-up.

Reasons/rationale for selecting the outcome measure(s):
Clinicians may regard treatment for tobacco as mostly pertaining to offering interventions to established adult smokers. A focus on promoting quit attempts and sustained tobacco abstinence similarly applies to youth. In fact, nearly 20% of youth that have never smoked are susceptible to smoking. Thus, youth tobacco prevention and cessation efforts require different approaches as compared to adults (e.g. quitlines, medications, etc.). It is necessary to employ a unique and evidenced-based method such as ASPIRE to curb tobacco use among youth.

As part of this project’s preparation and to establish the foundation necessary for achieving Category 3 outcomes, we will focus on: infrastructure development, delivery service improvement/program development, provider training, and staff hiring and training. By enhancing existing resources and activities, the proposed project will permit us to dramatically increase the reach of this evidence-based program throughout Medicaid-eligible/indigent adolescents in the nine counties of RHP3.

During the process of becoming an established smoker, a young person transitions through several stages –from not susceptible to susceptible, progressing to smoking initiation, and current
smoking. This ASPIRE program is compatible with the aforementioned Category 3 outcome measure, because ASPIRE provides access to prevention and cessation services virtually nonexistent in these communities. More specifically, the ASPIRE program was tested with an 18-month randomized controlled study among 1,160 ethnically diverse students from 16 inner-city high schools in Houston. About 6% of control group participants initiated smoking whereas < 2% of the intervention group initiated smoking (p < .05). (1) According to the 2010 U.S. Bureau of the Census, there are approximately 1.4 million adolescents residing in RHP3 counties. Within this figure, we conservatively estimate that nearly 305,500 youth within this group (i.e., 25%) are eligible for Medicaid/indigent. Our efforts will result in reduced susceptibility, increased quit attempts and increased cessation among disadvantaged RHP3 adolescents. The cumulative effect of all these activities will lead to significant reduction of tobacco use among high risk youth.

**Relationship to Other Projects:**
By delivering a tobacco use prevention and cessation program to youth, this project, like our other projects, supports one of the eight goals of the Comprehensive Cancer Control Program at MD Anderson Cancer Center.

**Relationship to Other Performing Providers’ Projects in the RHP:**
Healthcare treatment cannot focus to only the acute or chronic encounter and properly treat the patient. It is critical that our region focuses to patient education and community education to ensure a proactive and responsive approach to healthcare needs. The education models represented in the Region 3 RHP plan can be identified in the Initiative Grid (addendum) and all focus to outcome measures such as appropriate utilization, patient satisfaction scores, and standalone chronic condition scores such as diabetes and asthma.

**Plan for Learning Collaborative:** We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:** We have based our project valuation on California’s 1115 Medicaid Waiver model. As such, we have valued our projects at 2.5 times that of the estimated costs. Basing our valuations on California’s calculations we know we are well within the potential range of future cost savings when looking at the following from Prevention Institute and Trust for America’s Health Issue Report entitled *Prevention for a Healthier America: Investments in Disease Prevention Yield Significant Savings, Stronger Communities (July 2008):*

- Prevention saves money – an investment of $10 per person per year in programs to increase physical activity, improve nutrition, and prevent tobacco use could save the country more than $16 billion in annual health care costs within five years.
- Prevention can reduce end-of-life costs by increasing health during the lifespan, what researchers call the *compression of morbidity*.
- There is a substantial return-on-investment in prevention – For every $1 invested in community-based prevention, the return amounts to $5.60.
**Project Title:** Implement innovative evidence-based strategies to reduce tobacco use - Multimedia Tools and Community Engagement for Youth Early Tobacco Prevention and Cessation

**Year 2** (10/1/2012 – 9/30/2013)

**Milestone 1 [P-1]:** Establish project infrastructure development (staff, resources, community partners) for the implementation of evidence-based ASPIRE program in Region 3 counties.

**Metric 1 [P-1.1]:** Hire and train personnel to support and manage the project.

**Baseline/Goals:** Our goal is to hire and train at least 4 new personnel to support and manage the project.

**Data Source:** Records of planning, job postings, and documents from human resources databases

**Rationale/evidence:** It is imperative to identify and hire qualified personnel to deliver this smoking prevention and cessation resource that lays the groundwork for widespread adoption of innovative care leading to better health and better care at reduced costs.

**Metric 2 [P-1.2]:** Establish relationships with community

| Year 3 | Year 4 | Year 5 |

**Milestone 4 [P-2]:** Implement evidence-based innovative ASPIRE program among Medicaid-eligible adolescents from Harris, Austin, and Colorado counties through schools and clinics.

**Metric 1 [P-2.1]:** Medicaid-eligible/indigent adolescents enrolled into ASPIRE program.

**Baseline/Goal:** Baseline of nearly 4,100 enrolled ASPIRE participants in the Houston area. Goal: expand ASPIRE reach to Medicaid-eligible/indigent youth from 9 sites in Harris, Austin, and Colorado counties.

**Data Source:** Records of program planning, correspondence, and ASPIRE data system

**Rationale/evidence:** It is imperative to identify and hire qualified personnel to deliver this smoking prevention and cessation resource that lays the groundwork for widespread adoption of innovative care leading to better health and better care at reduced costs.

**Metric 2 [P-2.2]:** Establish relationships with community

**Milestone 6 [P-2]:** Implement evidence-based innovative ASPIRE program among adolescents from Fort Bend, Chambers and Matagorda counties through schools and clinics.

**Metric 1 [P-2.1]:** Medicaid-eligible/indigent adolescents enrolled into ASPIRE program.

**Baseline/Goal:** Anticipate enrolling an additional 2,400 participants over DY3 baseline.

**Data Source:** Documentation of efforts, ASPIRE data system

**Milestone 8: Estimated Incentive Payment:** $2,364,075.00

**Milestone 7 [P-7]:** Participate in bi-annual meetings with other RHP providers and identify areas for improvement

**Metric [P-7.1]:** Attendance in at least 2 semi-annual face-to-face meetings organized by the RHP

**Baseline/Goal:** Require that a

Project Option 2.7.1 – Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (e.g., mammography screens, colonoscopies, prenatal alcohol use, etc.): Expand Project VALET
Unique RHP Project ID: 112672402.2.4
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Summary:
Provider: The University of Texas MD Anderson Cancer Center is a comprehensive cancer center ranked first in cancer care by U.S. News & World Report and dedicated to patient care, education, research and prevention. MD Anderson is comprised of several Texas Medical Center campus locations, two research campuses in Bastrop County, Texas, four regional care centers and a number of national and international divisions and affiliates. More than 108,000 people—almost one-third of them new patients—were seen in FY2011. MD Anderson provided $215 million in uncompensated charity care to Texans in FY2011.

Intervention(s): This project will expand Project VALET (Providing Valuable Area Life-Saving Exams in Town), a breast cancer screening mammography service for uninsured, low-income or Medicaid eligible women, ages 40 to 69 in Houston, to the RHP3’s coverage area.

Need for the project: A) This project addresses the following unique community needs in the RHP3: CN.2-Inadequate access to specialty care; CN.11-High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with cancer; CN.20-Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs; CN.21-Inadequate transportation options for individuals in rural areas and for indigent/low-income populations; CN.22-Insufficient access to services that are specifically designed to address racial, ethnic, and culturally health disparities. B) This program has consistently increased the numbers of uninsured, low-income or Medicaid eligible women – especially racial/ethnic minorities, such as Hispanic and African American – getting screened for breast cancer. Since its inception, Project VALET has demonstrated that despite Houston’s vast medical services, the percentage of women in need of breast cancer screening is still high (36%). Barriers to care, such as lack of transportation, partially explain low screening rates in this population. Currently, the number of screening appointments needed exceeds the available screening capacity.

Target Population: Women within the RHP3 counties eligible to participate in Project VALET are ages 40 to 69, asymptomatic, and uninsured, low-income or Medicaid eligible women. Women must also receive a clinical breast exam at one of the participating clinics before scheduling a screening mammogram with MD Anderson Mobile Mammography Appointment Line.

Category 1 or 2 expected patient benefits: The DY4 goal is to increase the number of breast cancer screenings provided by 166% over DY3 (1,200 screening mammogram services will be provided). The DY5 goal is to increase the number of breast cancer screenings provided by 25% over DY4 by extending project in two additional RHP area clinics (1,500 screening mammogram services will be provided).

Title of Outcome Measure (Improvement Target): IT-12.6: Other Outcome Improvement Target: Women in need of diagnostic test(s). IT-12.6: Other Outcome Improvement Target: Women returning for an annual mammogram per recommended screening guidelines. IT-12.1: Breast Cancer Screening (HEDIS 2012) Number of women, ages 40 to 69, who have received an annual mammogram during the reporting period and number of women ages 40 to 69 in service area who meet Project VALET’s eligibility criteria.
Project Option 2.7.1  Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (e.g., mammography screens, colonoscopies, prenatal alcohol use, etc.) – Expansion of Project VALET of Screening Mammograms

**Unique Project ID:** 112672402.2.4  
**Performing Provider Name/TPI:** The University of Texas MD Anderson Cancer Center / 112672402  
**Project Description:**

The University of Texas MD Anderson Cancer Center (MD Anderson) will expand Project VALET (Providing Valuable Area Life-Saving Exams in Town), a breast cancer screening mammography service for uninsured women, ages 40 and older in Houston, to the RHP3’s coverage area. Current partners include The Rose, a non-profit breast organization, and the Houston Department of Human and Health Services (HDHHS)

For the past four years, Project VALET has relied on the MD Anderson Diagnostic Imaging’s availability to provide screening dates with their sole digital mobile mammography van. Since the majority of their screening dates are reserved for long-standing corporate clients and clinics, the acquisition of a new mobile mammography van would enable Project VALET to increase its screening capacity, thus reaching uninsured, low income or Medicaid eligible women and expanding its geographic coverage to include neighboring clinics within the RHP3 area.

Project VALET’s overall goals align with the regional goals since they will leverage existing programs which offer well-woman exams and enhance them by providing free screening mammograms to underserved populations that might not otherwise have access to this specialty care or the ability to pay for it. Doing so will increase the number of uninsured, low income or Medicaid eligible women in the RHP3 who receive a clinical breast exam and screening mammogram, especially those who have not been compliant with the recommended American Cancer Society (ACS) screening guidelines for the early detection of breast cancer. It will also increase the number of women who will return, through Project VALET, for their annual screening mammogram. (The ACS guidelines used for breast cancer are an annual clinical breast exam for asymptomatic women age 40 and older as a part of a periodic health examination as well as annual mammography) (1). This implements best-practices and maximizes the use of technology. This will reinforce patients to adopt preventive health care measures and in the process, positively impact breast cancer outcomes.

This project does not receive funding from nor does it advance any federal initiatives pertaining to CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/ Hospital acquired infection) grants.

**Target Population and Eligibility:** To be eligible to participate in Project VALET, a woman must be 40 years of age or older, asymptomatic and uninsured, low income or Medicaid eligible. (Citizenship or legal residency status will not be requested.) After receiving a clinical breast exam at one of the participating clinics, women meeting the eligibility criteria will be given the phone number to the MD Anderson Mobile Mammography Appointment Line and information on what to expect on the day of the screening event. (The information will be available in English and Spanish as well as any other language, should a population require this.) It is the woman’s responsibility to schedule her screening mammogram. MD Anderson Mobile Mammography Appointment Line staff members will make a reminder call to the patient 24-
hours in advance of her appointment. On the screening day, the patient will complete her registration forms, receive an educational packet with breast health information and the instructions for the referral process for women in need of diagnostic tests with program partners. She will also self-address a postcard to be sent to her residence the following year, as a reminder to return for her annual screening mammogram. (Postcards will be sent one month prior to the recommended screening date.). Two to three weeks after the screening event, both the patient and her referring clinic will receive a copy of the screening result. If the result is negative, the woman is encouraged to return for an annual screening mammogram. If positive, the community health worker (CHW) will navigate the woman to a partner facility for screening/diagnostic follow up.

Goal(s) and Relationship to Regional Goal(s):
The goal of this project is to utilize an evidence-based approach in RHP3 clinics to increase breast cancer screening to women, ages 40-69, who qualify for a free, breast screening mammogram. Culturally appropriate material will be distributed to all women who go in for a well-woman exam.

To ensure the success of this project, the program staff manager will train clinic staff and CHWs on the process of how to obtain a screening mammogram; ensure that proper data and documentation is being collected; attend screening events to help register patients and answer any questions that might arise.

Project Goals:
- Assess the number of women who have previously received a screening mammogram
- Increase the number of uninsured, low income and Medicaid eligible women who have received a screening mammogram in RHP3 and who return for their annual screening mammogram
- Establish base-line mammograms for traditionally non-compliant populations
- Increase the frequency and geographical range of screening mammogram events in the RHP3

This project meets the following Region 3 goals:
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The Project VALET Expansion program aims to reduce the incidence and mortality of breast cancer by offering free screening mammograms to women who qualify, in a participating neighborhood clinic. This project will be implemented in three counties within the RHP3 geographic area. Clinics targeted are: Houston Department of Health and Human Services, Federally Qualified Health Centers (FQHCs), and other clinics that provide well-woman exams.

Challenges:
Internal challenges: First and foremost, all program planning and implementation hinges on purchasing a new, digital mobile mammography van, without which, it is impossible to add more screening dates and/or clinics. This is imperative since we have reached the maximum amount of days available with the current van. The additional van will allow for both increased...
capacity and also provide back-up coverage for our current van, which is experiencing some mechanical issues due to age. (Historically, Project VALET cancels an average of four to five screenings per year due to this problem.) This has limited the range of services provided.

**External challenges:** A challenge is recruiting women who are unaccustomed to seeking preventive care because of financial barriers or the fear of getting screened without resources for diagnostic testing and/or treatment, should they need them. The CHWs will create educational folders with breast cancer information and help navigate the patient in the referral process for women in need of diagnostic tests with program partners. The CHWS and the program staff will be available for additional questions or issues that might arise.

**Environmental challenges:** Inclement weather (e.g., heavy rainfall) typically increases the no-show rate because some of the patients take public transportation or walk to the screening events.

**Five-year Expected Outcome for Provider and Patients:**

- Increase the number of uninsured, low income and Medicaid eligible women adhering to ACS’ breast cancer screening guidelines, including those who return for ACS’ recommended annual screening mammogram
- Establish base-line mammograms for traditionally non-compliant populations
- Increase the frequency of screening mammogram events in RHP3
- From DY3 – DY5, the program will deliver an estimated total of 3,500 screening mammograms. The breakdown is as follows:
  - **DY3:**
    - 800 screening mammogram services will be provided
    - 40 women served with diagnostic test(s)
  - **DY4:**
    - 1,040 screening mammogram services will be provided
    - 160 women returned for an annual screening mammogram
    - 60 women served with diagnostic test(s)
  - **DY5:**
    - 1,200 screening mammogram services will be provided
    - 300 women returned for an annual screening mammogram
    - 75 women served with diagnostic test(s)

**Starting Point/Baseline:**
From June 2008 to December 2012, Project VALET has provided 1,263 screening mammograms from approximately 1,500 encounters with potential participants. Ninety percent of the providers affiliated with this program have received training on how to implement Project VALET. Since this is an expansion project, the baseline will be determined after an initial period of operation.

**Rationale:**
Project VALET was selected because it has been successfully implemented on a smaller scale in the City of Houston. Furthermore, this program has consistently increased the numbers of uninsured and low-income women – especially racial/ethnic minorities, such as Hispanic and African American – getting screened for breast cancer. Since its inception, Project VALET has demonstrated that despite Houston’s vast medical services, the percentage of women in need of
breast cancer screening is still high (36%) (2). Barriers to care such as lack of transportation partially explain low screening rates in this population (3). Currently, the number of screening appointments needed exceeds the available screening capacity.

More than 2,800 women are expected to die this year in Texas as a result of breast cancer (4) and many of the women who die will present with late-stage disease because they did not participate in breast cancer screenings (5). Breast cancer death rates are highest for Black women (6). Indigent/low-income women and Hispanic women (7) are less likely to get annual breast screenings. Lack of insurance has been associated with significantly worse outcomes for several other cancer sites, specifically breast cancer (8). Moreover, malignant neoplasms exceed heart disease as a cause of death for Hispanics and the burden of cancer is more prominent in counties with larger numbers of Hispanics such as those in RHP3 (9). The insurance barrier impacts indigent/low income women disproportionately. This population has a higher rate of non-compliance with recommended mammography screening. Overall, lower incomes, lack of insurance and Hispanic ethnicity have been identified as factors associated with decreased participation in routine cancer screening.

Because this is a mobile mammography program that offers screening at low or no cost to participants, the barriers based on cost of services and lack of transportation to screening locations are eliminated. Furthermore, the project will addresses health care disparities due to language and cultural barriers because services and educational materials will be provided in Spanish, as well as any other language, should a population require this, using a culturally-tailored program for those in need of this approach.

Project Components:
Through Project VALET’s Expansion Program (the program will deliver an estimated total of 3,500 screening mammograms from DY3 – DY5), we propose to meet all project components and believe that the selected milestones and metrics relate to project components. There are no required core project components for Project Option 2.7.1.

Milestones & Metrics:
The following milestones and metrics have been chosen for the Expansion of Project VALET based on the project development and the needs of the target population:
- Process Milestone and Metrics: P-7 (P-7.1, P-7.2); P-X (P-X.1, P-X.2);
- Improvement Milestones and Metrics: I-X (I-X.1, I-X.2)
- Customizable Process Milestones and Metrics were chosen to specifically tailor their intent to the project process.

Unique community needs identification number the project addresses:
The project addresses the following unique community needs as identified in the community needs assessment:
- CN.2 – Inadequate access to specialty care
- CN.11 – High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with cancer
- CN.20 – Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs
- CN.21 – Inadequate transportation options for individuals in rural areas and for indigent/low-income populations
• CN.22 – Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative: The expansion of Project VALET represents a significant expansion of current breast cancer screening programs by further reducing barriers to care such as access to screening services at low or no cost, language barriers, and lack of transportation. This includes both a geographic expansion and an increase in the number of clinics and women served.

Related Category 3 Outcome Measure(s):
OD-12 Primary Care and Primary Prevention
IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)
• Numerator: Number of women who completed follow up/diagnostic test(s) with program partner(s)
• Denominator: Number of women referred for diagnostic test(s) with program partners
IT-12.6 Other Outcome Improvement Target: Women returning for an annual mammogram per recommended screening guidelines
• Numerator: Number of women ages 40 to 69, who return for their annual screening mammogram through Project VALET
• Denominator: Number of women ages 40 to 69, previously screened through Project VALET
IT-12.1 Breast Cancer Screening (HEDIS 2012)
• Numerator: Number of women, ages 40 to 69, who have received an annual mammogram during the reporting period. (TBD)
• Denominator: Number of women ages 40 to 69 in area, who meet Project VALET’s eligibility criteria

Reasons/Rationale for selecting the outcome measure(s):
The use of navigation services and promoting system changes in Category 2, is imperative in reaching the aforementioned outcome measures. For example, to increase the number of women who return for an annual screening mammogram, navigators will incorporate evidence-based reminder systems such as mailing postcards one month before their next annual screening mammogram. The MD Anderson Mobile Mammography Appointment line will also call women 24-hours prior to their scheduled mammogram. Both have been deemed as providing “strong evidence of their effectiveness in increasing breast cancer screening by mammography,” by The Guide to Community Preventive Services (14). These Cat 2 sources will create direct impact on IT-12.6 - Women in need of diagnostic test(s) and IT-12.6 - Women returning for an annual mammogram per recommended screening guidelines.

Providing free screening mammograms to uninsured, low income and Medicaid eligible women, who meet the screening criteria is a prevention strategy which removes the financial and transportation barriers that typically prevent these women from getting screened.

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently referred to a program partner for diagnostic follow up by program navigators. Those with
confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm, and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Screening completion rates for low-income/indigent and minority women in RHP3 continue to fall below guidelines of the CDC initiative Healthy People 2020 of 81.1 percent (10). According to 2010 Texas Behavioral Risk Factor Surveillance System for PHR5S (which includes all the counties in RHP3 except for Calhoun), 74.9% of Black women, 72.5% of Hispanic women, and only 69.3% of white women ages 40 and over have had a mammogram within the past two years (11). For women in household earning less than $25,000 per year, 64.3% have had a mammogram within the past two years. Healthy People 2020’s target for the breast cancer death rate is 20.6 deaths per 100,000 females and it seeks to reduce late-stage diagnosis of breast cancer to 41.0 new cases per 100,000 females by 2020 (12). None of the counties in RHP3 has met this goal with the exception of Fort Bend County with 20.1 deaths per 100,000 for 2005-2009 (13).

Relationship to other Projects:
The project will support Goal 5, “Reducing the mortality of breast cancer in the Houston MSA,” one of the eight goals of the Comprehensive Cancer Control Program at The University of Texas MD Anderson Cancer Center.

Relationship to Other Performing Providers’ Projects in the RHP:
The increase of primary care and specialty care will naturally result in additional ambulatory care encounters for our region patient base. The ambulatory initiatives cover items such as laboratory, PT/OT, social work, etc. and are a necessity of our patients to ensure a comprehensive treatment for access as well as cost avoidance. The Region 3 initiative grid in the addendum reflects all ambulatory operations initiatives.

Plan for Learning Collaborative:
We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for the Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region’s health care system.

Project Valuation:
We have based our project valuation on California’s 1115 Medicaid Waiver model. As such, we have valued our projects at 2.5 times that of the estimated costs. Basing our valuations on California’s calculations we know we are well within the potential range of future cost savings when looking at the following from Prevention Institute and Trust for America’s Health Issue Report entitled Prevention for a Healthier America: Investments in Disease Prevention Yield Significant Savings, Stronger Communities (July 2008):

- Prevention can reduce end-of-life costs by increasing health during the lifespan, what researchers call the compression of morbidity.
- There is a substantial return-on-investment in prevention – For every $1 invested in community-based prevention, the return amounts to $5.60.

University of Texas M.D. Anderson Cancer Center
Pass 2
Project Option 2.7.2 – Implement innovative evidence-based strategies to reduce tobacco use – Replicating Ask Advise Connect (AAC) in Federally-Qualified Health Centers

Unique RHP Project ID: 112672402.2.5/ PASS 2
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Summary:
Provider: The University of Texas MD Anderson Cancer Center is a comprehensive cancer center ranked first in cancer care by U.S. News & World Report and dedicated to patient care, education, research and prevention. MD Anderson is comprised of several Texas Medical Center campus locations, two research campuses in Bastrop County, Texas, four regional care centers and a number of national and international divisions and affiliates. More than 108,000 people—almost one-third of them new patients—were seen in FY2011. MD Anderson provided $215 million in uncompensated charity care to Texans in FY2011.

Intervention(s): Ask Advise Connect (AAC) will be delivered in four Federally Qualified Health Centers (FQHCs) in Harris County by implementing clinical practice guidelines and promoting health system supports in electronic health records. In AAC, licensed vocational nurses and medical assistants are trained to ask all adult patients at every visit about their smoking status at the time that vital signs are assessed, provide brief advice to all smokers to quit, offer cessation assistance via the Quitline, and directly connect patients willing to accept assistance with the Quitline. Connections to the Quitline are made by clicking an automated link in the electronic health record (EHR) that sends smokers’ names and phone numbers to the Quitline within 24 hours. Patients are contacted by the Quitline within 48 hours of receipt of their contact information.

Need for the project: A) This project addresses Community Needs in RHP3: CN.11-High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including: cancer, diabetes, obesity, cardiovascular disease, asthma, and AIDS/HIV; CN.12 – High rates of tobacco use and excessive alcohol use. B) An important component of the Patient Protection and Affordable Care Act (i.e., health care reform; ACA) is that information regarding tobacco use assessment and treatment be systematically tracked and recorded through electronic health records (EHR). Meaningful use criteria require clinicians to screen the smoking status of more than 50% of all unique patients who are 13 years old or older. This project does not receive funding from nor does it advance any federal initiatives pertaining to CMS Innovation Center Grants, HITECH payments, HRSA grants, SAMHSA funding and CDC (immunization grants or CLASBI/Hospital acquired infection) grants.

Target Population: Adult, medically underserved tobacco users within four selected FQHCs in Harris County. The nine FQHCs include a total of 25 primary care clinic sites and provide care to approximately 80,160 medically underserved individuals, a majority of whom are Medicaid-eligible/indigent.
Expected Reach for Implementation DY3:

Category 1 or 2 expected patient benefits: The DY3 goals is to screen 50% of the adult patients receiving services at selected FQHCs and to connect 40% of eligible smokers to the Quitline. Screening in DY 4 will increase to 75%.

Category 3 outcomes: IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment) – DY 4, 35% of Medicaid-eligible/indigent smokers will enroll in treatment with the Quitline; IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Quit Attempts) – DY 4, 50% of Medicaid-eligible/indigent smokers enrolled in Quitline treatment will make a quit attempt; IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Staying Quit) – DY4, 28% of Medicaid-eligible/indigent smokers enrolled in Quitline treatment will be abstinent at the time of follow-up.
Project Option 2.7.2 Implement innovative evidence-based strategies to reduce tobacco use
– Replicating Ask Advise Connect in Federally-Qualified Health Centers

Unique RHP Project Identification Number:  112672402.2.5 / Pass 2
Performing Provider Name/TPI: The University of Texas MD Anderson Cancer Center / 112672402

Project Description: Smoking is the leading cause of preventable disease, disability, and death in the United States. Smoking cessation decreases the risk of lung cancer, other cancers, heart attack, stroke, and chronic lung disease. Although the health benefits of quitting smoking are substantial, quit rates are low. Furthermore, smokers with lower socioeconomic status tend to be less successful at quitting. Therefore, connecting underserved smokers with evidence-based cessation treatment such as treatment delivered by Quitlines is crucial for disease prevention and the elimination of tobacco-related health disparities.

The overarching goal of the proposed project, Replicating Ask Advise Connect (AAC), is to deliver evidence-based smoking cessation treatment to smokers seeking care in Federally-Qualified Health Centers (FQHC) in Harris County, Texas, and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

Associations Between Socioeconomic Status and Smoking. Smoking is becoming increasingly concentrated among individuals with the lowest levels of education, income, and occupational status. These smokers tend to have greater difficulty quitting. Further, low SES smokers are less likely to use effective resources for quitting and this phenomenon may partially explain why these smokers are less successful at quitting. Smoking is the single largest behavioral contributor to cancer and other diseases, and heavily accounts for a significant proportion of socioeconomic disparities in the incidence and mortality of cancer and other diseases. Thus, it is crucial that these smokers be provided with effective and accessible treatment.

Program overview. AAC is delivered through implementing clinical practice guidelines and promoting health system supports in electronic health records. In AAC, licensed vocational nurses and medical assistants are trained to ask all adult patients at every visit about their smoking status at the time that vital signs are assessed, provide brief advice to all smokers to quit, offer cessation assistance via the Quitline, and directly connect patients willing to accept assistance with the Quitline. Connections to the Quitline are made by clicking an automated link in the electronic health record (EHR) that sends smokers’ names and phone numbers to the Quitline within 24 hours. Patients are contacted by the Quitline within 48 hours of receipt of their contact information.

Quitline-Delivered Treatment. The Quitline is supported by the State of Texas Department of State Health Services and operated by Alere Wellbeing, Inc. It is staffed with trained cessation counselors available 24 hours a day, seven days a week. Counseling is available in English and Spanish, and can be provided in at least 15 additional languages through a third party. All smokers who enroll in cessation treatment receive the standard Guideline-based protocol along with access to nicotine replacement therapy. This includes up to five proactive counseling calls, each designed to help develop problem-solving and coping skills, secure social support, and plan for long-term abstinence. Follow up calls are timed to address smoking relapse. The call timing is flexible and adjusted as needed.
Community Partners. For this project, we will partner with the Harris County Healthcare Alliance (the Alliance), which coordinates efforts of safety-net clinics in Harris County. The Alliance will coordinate communication, EHR support, and data collection with participating FQHCs.

The proposed program builds upon a strong and established partnership with Harris Health System, The Texas Quitline, and Alere Wellbeing, and all partners will play substantial and integral roles in the program. Currently, AAC is being implemented in one FQHC, Good Neighbor Healthcare Center. Replication of the project to additional FQHCs will allow us to dramatically increase the number of smokers that are connected with evidence-based cessation treatment through implementing systems-level changes that will address both clinic- and patient-level barriers to connection with treatment through the use of an automated connection system. El Centro de Corazon is the first clinic that has agreed to implement AAC through the expansion effort.

Goal(s) and Relationship to Regional Goals(s): Aim 1: Disseminate a previously developed, evidence-based approach to linking smokers with cessation treatment in Federally-Qualified Health Centers.

Our goal is to work with up to four Federally Qualified Health Centers to disseminate Ask Advise Connect, a tested tobacco treatment program that utilizes systems level change and EHR to connect smokers to tobacco cessation treatment. If successful, our program will be readily implemented, maintained, and administered by the clinic sites and ultimately, disseminable to centers across the RHP.

Aim 2: Implement an evidence-based approach to linking smokers with cessation treatment among underserved persons receiving care at Federally-Qualified Health Centers.

Our goal is to screen, enroll, and connect smokers to smoking cessation treatment (standard Guideline-based treatment provided by the State Quitline) to smokers receiving care at FQHCs.

Aim 3: Evaluate the effectiveness of the smoking cessation treatment connection program implemented at FQHCs.

Our goal is to evaluate the following:

- **Reach** of the program - defined as the proportion of smokers who enroll in smoking cessation treatment through the program.
- **Efficacy** of the program - defined as the proportion of smokers who successfully quit smoking, assessed at 6 month follow-up.
- **Implementation** of the program – defined as: 1) proportion of patients screened for program eligibility; 2) proportion of patients contacted by Quitline; 3) proportion of patients enrolled in treatment, and 4) proportion of patients who successfully quit smoking.

Regional Goal. This proposed project is responsive to the first regional goal, “Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health outcomes and patient satisfaction.” At the present time, most FQHCs providing care to the underserved population in the greater Houston area do not systematically screen smoking status or record status in the EHR. However, smoking status and tobacco cessation are new healthcare
clinical measures that will be required for FQHCs to collect. Thus, the proposed project will fill an important gap by providing a systematic way to assess all patients’ smoking status, provide advice to quit, and connect patients to tobacco cessation treatment.

**Challenges:** Major challenges of the project include the following: 1) enrolling FQHCs to accept the intervention, 2) overcoming barriers to implement the intervention, and 3) offering a sustainable program. We have carefully considered each of these challenges in the design of the project. First, buy-in will be facilitated by our partnerships with the Alliance and with Good Neighbor Health Care Center. Specifically, the executive director at Good Neighbor, strongly supports this program and is committed to disseminating Ask Advise Connect to other FQHCs. Also, key collaborators at the Alliance will coordinate communication, data collection, and systems (EHR) improvements with FQHCs. Second, the approach itself has been tested in 10 Harris Health community clinics, 10 Kelsey Seybold Clinics, and one FQHC and can be tailored to the EHR systems and staffing plans of each clinic. The clinical staff provided critical input to the planning and implementation of the program. The program is intended to work within the existing vital signs and patient assessment procedures of each clinic and adds minimal time to existing practices. Also, MD Anderson program staff will provide on-site training and technical support needed to implement the intervention. Third, a crucial component of the project is the training of LVNs and medical assistants to screen for smoking status, provide advice to quit, connect patients to treatment, and log process in the EHR. This intervention provides a clinical systems change to consistently screen for smoking status and connect smokers to cessation treatment. The personnel resources and EHR changes will remain after the funding for the program ends. The program will ultimately meet the needs of the clinics to address tobacco cessation, a new healthcare clinical measure requirement of FQHCs.

**Five Year Expected Outcome for Provider and Patients:** We believe our program will: 1) enhance screening for smoking, 2) promote the delivery of evidence-based smoking cessation treatment, 3) reduce the prevalence of current smoking, and ultimately 4) reduce morbidity and mortality of smoking-related malignancies among FQHC patients.

**Starting Point/Baseline:** Patients will be recruited from the population of Medicaid eligible/indigent individuals receiving care at up to four Federally Qualified Health Centers. Preliminary discussions have identified Central Care, Good Neighbor, El Centro, and HOPE community health centers as potential partners. The total adult patient population at these centers is 23,111 (2011 UDS Reports).

Currently, smoking status is not systematically assessed, nor is cessation treatment offered.

Based on our group randomized trial conducted in 10 Harris Health Community Health Centers, 16.2% of patients are expected to be current smokers. Although our goal is to have the smoking status of all patients seeking care at the clinics assessed and recorded in the EHR, we believe that it is more realistic to estimate that 50% of patients will have their smoking status assessed and recorded in the EHR in DY 3. Screening will increase to 75% in DY 4. Therefore, we anticipate that in DY 3 11,555 patients will have their smoking status assessed and recorded in the EHR and that 1,871 (16.2%) of these individuals will be current smokers. All smokers will receive advice to quit smoking and will be offered connection with the Texas Quitline; 40% (748) will agree to be connected to the Quitline.
Based on results of the Harris Health study, it is anticipated that 35% (261) of the patients connected to the Quitline will enroll in Quitline-delivered treatment. Of patients enrolled in Quitline-delivered treatment, 50% (130) will make a quit attempt and 28% (73) will abstain at 6-month follow-up.

**Expected Reach for DY 3:**

**Rationale:** Reasons for selection the project option: The Role of Healthcare Reform in Supporting the Sustainability of AAC. Recent policy initiatives have created a unique and historic opportunity to integrate and sustain the delivery of evidence-based tobacco treatments into healthcare settings. Specifically, the Patient Protection and Affordable Care Act (i.e., health care reform; ACA) has created payment incentives that address tobacco. A critically important component of this legislation is that information regarding tobacco use assessment and treatment be systematically tracked and recorded through electronic health records (EHR). Meaningful use criteria require clinicians to screen the smoking status of more than 50% of all unique patients who are 13 years old or older, as well as track the percentage of patients 18 and older who are current tobacco users, seen by a practitioner during the year, and receive advice, cessation treatments, or recommendations to use cessation medications and/or other strategies. As healthcare systems in Texas begin to implement systems to comply with meaningful use criteria regarding tobacco, referrals to the Texas Quitline are likely to increase dramatically. Unfortunately, without adequate infrastructure and financial support to treat these additional smokers, the Quitline is likely to become quickly overwhelmed and be unable to meet this increased demand for services.

Enhancing Widespread Adoption of Evidence-Based Smoking Cessation Treatment Delivered via the Texas Quitline. The past three decades have generated a tremendous amount of research and knowledge regarding how best to help smokers quit. These data indicate that the use of evidence-based cessation treatments can increase smoking abstinence rates as much as fourfold. However, far more attention and research dollars have been directed toward expansion of this knowledge base than to the dissemination and utilization of this knowledge. This lack of dissemination will ultimately diminish progress toward achieving critically important public health goals. Thus, the focus of this proposal is on increasing utilization of the Texas Quitline among smokers with the greatest need for assistance. Ask, Advise, Refer (AAR) is the recommended standard of care for linking smokers in healthcare settings with evidence-based cessation treatment. Although AAR is an improvement over previous strategies, we have developed, implemented, and maintained an even more effective strategy for providing a seamless linkage between health care systems and the Texas Quitline. Ask Advise Connect...
(AAC) utilizes the electronic health record (EHR) to systematically prompt clinicians to assess the smoking status of every patient at every visit, advise him/her to quit smoking, and directly and electronically link interested smokers with the Quitline. In a recently completed group randomized controlled trial among 10 Harris Health System community health clinics and over 113,000 patients, Quitline treatment uptake is 0.5% of all smokers seeking care at AAR clinics, vs. 14.7% among patients seeking care at AAC clinics, a 30-fold difference. To the best of our knowledge, this is the highest population level cessation treatment uptake reported to date. Similarly impressive results (0.6% in AAR clinics vs. 7.8% in AAC clinics) were found in a second recently completed group randomized controlled trial among 10 Kelsey Seybold clinics (a Houston based health care system that does not focus on the underserved).

**Project Components:** We believe our program will result in: 1) dissemination of an evidence-based smoking cessation program [P-X], 2) enhanced screening for smoking [P-X], 3) promote the delivery of evidence-based smoking cessation treatment [P-2], 4) reduce the prevalence of current smoking [IT-11.46], and ultimately 5) reduce morbidity and mortality of smoking-related malignancies in the FQHC patient population [IT-11.6].

**Milestones and Metrics:** The following milestones and metrics have been chosen for the Smoking Cessation Program for Underserved Persons receiving care at FQHCs:

- Process Milestones and Metrics: P-X (P-X.1, P-X.2); P-2 (P-2.1, P-2.2); P-7 (P-7.1, P-7.2)
- Improvement Milestones and Metrics: I-X (I-X.1, I-X.2); OD-11 (IT-11.6)

**Unique community need identification number the project addresses:** The project addresses the following unique community needs as identified in the community needs assessment:

- CN.11 – High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including: cancer, diabetes, obesity, cardiovascular disease, asthma, and AIDS/HIV
- CN.12 – High rates of tobacco use and excessive alcohol use

**How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:**

MD Anderson tested AAC in 10 Harris Health System community health centers, 10 Kelsey Seybold clinics, and is currently implementing the program in Good Neighbor Healthcare Center. AAC was found to have from a 13- (Kelsey) to 30-fold (Harris Health) increase in smoking cessation treatment enrollment compared to AAR, the standard treatment. To the best of our knowledge, this is the highest population level cessation treatment uptake reported to date. This new initiative is to support widespread adoption of AAC to Federally-Qualified Health Centers, where it will have broad reach to medically-underserved smokers.

**Related Category 3 Outcome Measure(s):**

IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

- DY 4, 35% of Medicaid eligible/indigent smokers will enroll in Quitline treatment

IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Quit Attempts)

- DY 4, 50% of Medicaid eligible/indigent smokers enrolled in Quitline treatment will make a quit attempt
IT-11.6 Other Outcome Improvement Target (Smoking Cessation – Staying Quit)

- DY 4, 28% of Medicaid eligible/indigent smokers enrolled in Quitline treatment will be abstinent at the time of follow-up

**Reasons/rationale for selecting the outcome measure(s):** The selected Category 3 Outcome Measure directly addresses the Regional Health Plan Community Needs CN.12 – High rates of tobacco use, and would capture reduction in tobacco use among smokers in participating FQHCs. Aim 3 of the program is to evaluate the effectiveness of the smoking cessation program implemented at FQHCs. The reach, efficacy, and impact of AAC will be evaluated using the RE-AIM conceptual framework. RE-AIM provides a systematic way to evaluate the impact of the dissemination and implementation of public health interventions and includes five criteria: reach, efficacy, adoption, implementation, and maintenance. **Reach** is defined as the number of smokers visiting the clinics that talked with the Quitline / total number of smokers that visited the clinics. **Efficacy** is defined as the total number of smokers visiting the clinics that enrolled in treatment with the Quitline / total number of smokers that visited the clinics. **Impact** is defined as Reach x Efficacy.

**Replication.** A major consideration that guided the conceptualization and development of the Ask Advise Connect model was that it has the potential to make a significant public health impact. Because we are delivering the approach in community clinics that provide care to underserved, primarily racial/ethnic minority patients with low socioeconomic status, our dissemination setting is representative of real-world population-based tobacco control settings and has broad reach. In addition, the dissemination approach is intended to be delivered by clinical providers using the EHR. Third, the approach has been designed to greatly streamline the process of connecting smokers interested in quitting with the Quitline in order to shift the burden of counseling from clinical providers to the Quitline. In contrast to providing counseling in the clinic setting, connecting smokers with proactive telephone counseling via the Quitline is convenient, eliminates transportation time and costs, entails no childcare costs, is more acceptable to patients than face-to-face counseling, reduces the burden on physicians and other members of the health care team, and has demonstrated strong efficacy. Importantly, our approach could be feasibly and cost-effectively implemented in numerous population-based settings for tobacco control (e.g., clinics, hospitals, dentist offices), the environments where quitlines would be most likely to be disseminated and implemented. Taken together, each of these factors is important and all are intended to ensure that the dissemination approach could be easily adopted in other public health settings.

**Relationship to other Projects:** By delivering an evidenced based smoking cessation program Medicaid-eligible/indigent smokers in FQHCs, this program is in line with the RHP. Unique RHP Project ID Number 112672402.2.2 provides a similar smoking cessation project in one FQHC, tailored to persons living with HIV/AIDS. Unique RHP Project ID Number 112672402.2.4 Expand Project VALET will work in partnership with FQHCs to provide mammography screening. Also, all RHP project teams work in collaboration with the Comprehensive Cancer Control Program at MD Anderson.

**Relationship to Other Performing Providers’ Projects in the RHP:** Innovation is key to the transformation of healthcare in our community. The consistency of innovation in our region allows for increased improvements based on research trends, patient need, and provider
availability. The waiver funding allows for innovation in specific areas and all innovative projects included in the plan are similar in the fact of program redesigns for historic treatments, and focus to chronic condition outcome measures such as central line infections. The Region 3 initiative grid in the addendum can provide a side by side comparison of all projects that directly relate to innovation.

**Plan for Learning Collaborative:** We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:** We have based our project valuation on California’s 1115 Medicaid Waiver model. As such, we have valued our projects at 2.5 times that of the estimated costs. Basing our valuations on California’s calculations we know we are well within the potential range of future cost savings when looking at the following from Prevention Institute and Trust for America’s Health Issue Report entitled *Prevention for a Healthier America: Investments in Disease Prevention Yield Significant Savings, Stronger Communities (July 2008)*:

- Prevention saves money – an investment of $10 per person per year in programs to increase physical activity, improve nutrition, and prevent tobacco use could save the country more than $16 billion in annual health care costs within five years.
- Prevention can reduce end-of-life costs by increasing health during the lifespan, what researchers call the *compression of morbidity*.

There is a substantial return-on-investment in prevention – For every $1 invested in community-based prevention, the return amounts to $5.60.

**Baseline/Goal:** Goal is for staff to implement required “raise the floor” improvement initiatives.

**Data Source:** Documentation of “raise the floor” improvement initiatives agreed upon at each semiannual meeting and documentation that the participating provider
### Project Components:

**Project Title:** Implement innovative evidence-based strategies to reduce tobacco use - Replicating Ask Advise Connect in Federally-Qualified Health Centers

**Performing Provider Name:** The University of Texas MD Anderson Cancer Center

**Related Category 3 Outcome Measure(s):**

- 112672402.3.13
- 112672402.3.14
- 112672402.3.15
- IT-11.6
- Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)
- Other Outcome Improvement Target (Smoking Cessation – Quit Attempts)
- Other Outcome Improvement Target (Smoking Cessation – Staying Quit)

### Year 2

(10/1/2012 – 9/30/2013)

- **Metric 2 [P-2.2]:** Document implementation strategy; Train staff and implement AAC procedures.
  - **Baseline/Goal:** Front-line staff in FQHCs do not have standard procedures for screening and documenting smoking status and referral to treatment. Goal is to train staff to deliver AAC at intake.
  - **Data Source:** Documentation of training and booster trainings.
  - **Rationale:** Training is required to teach staff new AAC procedures, informed consent, and EHR enhancements.
  - **Estimated Incentive Payment:** $394,531.33

### Year 3

(10/1/2013 – 9/30/2014)

- **Metric 1 [P-7.1]:** Participate in semi-annual face-to-face meetings or seminars organized by the RHP.
  - **Baseline/Goal:** Goal is for staff to participate in at least two face-to-face meetings.
  - **Data Source:** Documentation of adherence.
  - **Rationale:** Investment in learning and sharing of ideas is central to improvement. The highest quality health care systems promote continuous learning and exchange between providers and decide collectively how to “raise the floor” and “raise the bar” for performance across providers.

### Year 4

(10/1/2014 – 9/30/2015)

- **Metric 1 [P-7.1]:** Participate in semi-annual face-to-face meetings or seminars organized by the RHP.
- **Baseline/Goal:** Goal is for staff to participate in at least two face-to-face meetings.
- **Data Source:** Documentation of adherence.

### Year 5

(10/1/2015 – 9/30/2016)

- **Metric 2 [P-2.2]:** Document implementation strategy; Train staff and implement AAC procedures.
  - **Baseline/Goal:** Based on previous studies with Harris Health, 40% of smokers were connected to the Outlines. Since FQHCs have a similar, Medicaid-eligible/indigent population, we expect similar results.
  - **Data Source:** Documentation of training and booster trainings.
  - **Rationale:** Training is required to teach staff new AAC procedures, informed consent, and EHR enhancements.

- **Estimated Incentive Payment:** $308,577.75

### Milestone 8 Estimated Incentive Payment:

- **Amount:** $308,577.75

### Milestone 9

- **Metric 1 [P-7.1]:** Participate in semi-annual face-to-face meetings or seminars organized by the RHP.
- **Baseline/Goal:** Goal is for staff to participate in at least two face-to-face meetings.
- **Rationale:** Investment in learning and sharing of ideas is central to improvement. The highest quality health care systems promote continuous learning and exchange between providers and decide collectively how to “raise the floor” and “raise the bar” for performance across providers.

- **Estimated Incentive Payment:** $632,126.50

### Milestone 12 [I-X] Increase adoption of Ask Advise Connect protocol by participating FQHC providers.

- **Metric 1 [I-X.1]:** Intermediate: Increased adherence to Ask Advise and Connect guidelines by providers.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $4,887,399.00
Project Option-2.9.1 Provide navigation services to targeted patients who are at high risk of disconnect from institutionalized health care: Expand Senior Care Capacity at West Houston

Unique RHP Project Identification Number: 094187402.2.1
Performing Provider Name/TPI: HCA - West Houston Medical Center TPI/094187402

- **Provider**: West Houston Medical Center is a 276-bed facility in Houston, Texas. The facility is located in the Houston-Sugarland-Baytown MSA, which serves a population of approximately 6,000,000 people.

- **Intervention(s)**: HCA intends to improve the patient throughput, overall experience and quality of care for geriatric patients. Specifically, HCA will create a designated “Senior Care Entrance” at the hospital and assign special hospital beds to accommodate the geriatric population. Additionally, HCA will train and maintain a Senior Care Coordinator dedicated to overseeing protocol-driven geriatric care. The Senior Care Coordinator will assist seniors in managing their appointments, maintaining their individual healthcare regimens, and accessing available support through the hospital and the community. In addition to guiding the patient through the healthcare system, in DY4 and DY5, HCA will focus on ensuring that patients without a PCP are given educational materials about available resources in the community. This will enable patients to receive the appropriate care in the appropriate setting – a main focus of the Waiver.

- **Need for the project**: Geriatric patient populations face unique challenges in obtaining care, and those challenges must be addressed in order for geriatric patients to have effective access to care. Harris County Hospital District’s DSRIP work groups have identified expanding access to care for seniors as a priority for the region. These patients are often on a fixed income, may have increased problems with mobility, memory, and technological ability which inhibit their ability to effectively access care.

- **Target population**: The target population of this project is geriatric patients in the community and surrounding areas, particularly those patients who are currently unable to access to care effectively. West Houston Medical Center experiences approximately 15,000-16,000 patient encounters with geriatric patients per year (with geriatric defined as ≥ 65 years or older). Of the geriatric patients treated, 20-26% are Medicaid-eligible or uninsured. Thus, while this project will benefit all geriatric patients at the hospital, 20-26% of the benefit will affect Medicaid and uninsured geriatric patients.

- **Category 1 or 2 expected patient benefits**: HCA will improve geriatric patients’ experience at its facility, and improve short- and long-term patient outcomes, by assisting these patients in navigating the often fractured and confusing healthcare continuum.
  - **DY2**: HCA does not expect direct patient benefit in DY2, as HCA will be implementing the patient navigation program, hiring personnel, and developing procedures and protocols for the program.
  - **DY3**: HCA expects that about 730 patients will benefit from the patient navigator program, most of whom are likely to be Medicaid-eligible or uninsured.
  - **DY4**: patient impact of about 2,075 patients in DY4, and about
  - **DY5**: about 4,150 patients.
• **Category 3 outcomes:** IT 3.1 – Through this project, West Houston will reduce the number of Potentially Preventable Readmissions (PPRs) for geriatric patients, indicating improved health outcomes and patient quality of life. PPRs are disruptive and often have a substantial impact on a patient’s chance of long-term recovery, and PPRs add hefty additional costs to the healthcare delivery system that can be prevented through improved access to primary and preventative care.

**Project Description:**
Through implementing this project, HCA intends to improve the patient throughput, overall experience and quality of care for geriatric patients. Geriatric patients will benefit from the dedicated care designed to meet the needs of patients greater than 65 years of age who live in West Houston’s primary and secondary zip codes (77072, 77082, 77083, 77036, 77042, 77077, 77094, 77099, 77450) located in Harris County. This dedicated care includes unique components to address both environmental and clinical service needs. Specifically, HCA will create a designated “Senior Care Entrance” at the hospital and assign special hospital beds which are designed to accommodate the geriatric population. Additionally, HCA will train and maintain a Senior Care Coordinator dedicated to overseeing protocol-driven geriatric care, which will be developed with input from facility geriatricians, and close communication with local SNFs, LTACs, and nursing homes to assure solid continuity of care. The Senior Care Coordinator will assist seniors in managing their appointments, maintaining their individual healthcare regimens, and accessing available support through the hospital and the community.

**Goal(s) and relationship to Regional goal(s):**

**Project goals:**
HCA hopes to improve geriatric patients’ experience as inpatients and outpatients at its facility, and to improve short- and long-term patient outcomes by assisting these patients in navigating the often fractured and confusing healthcare continuum. Specifically, by enabling geriatric patients to access the care they need, which is tailored to their needs. In addition to guiding the patient through the healthcare system, this project also seeks to match geriatric patients that do not have access to a primary care provider with a provider in the community. In DY4 and DYS HCA will focus on ensuring that patients without a PCP are given educational materials about available resources in the community.

**This project meets the following Region 3 goals:**
While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
• Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

• Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and

• Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges and how addressed:

• Identifying a qualified Senior Care Coordinator and training that person in geriatric-specific care needs and protocols – HCA will recruit and retain an individual who is qualified to navigate the healthcare continuum and will provide training for geriatric specific services.

• Need for community and provider education regarding the dedicated Senior Care services and geriatric protocols – HCA will address this challenge by training the Senior Care Coordinator to work with providers inside and outside of the hospital and prove the efficacy of managing seniors’ health on a consistent basis, as opposed to providing episodic care with little to no support.

• Educating patients and encouraging participation in the program – HCA will address this challenge by having the Senior Care Coordinator and other providers within the hospital explain the program to patients prior to enrollment.

5-year expected outcome for provider and patients:
HCA hopes to decrease the number of geriatric patients without a primary care provider who received education about a primary care provider in the ED, and accomplish a reduction in ED readmissions by patients enrolled in the navigator program by the end of the Waiver, as a result of increased preventative and managed care prior to seniors’ conditions reaching an acute or emergent stage.

Starting Point/Baseline:
West Houston Medical Center does not currently provide patient navigation services to its geriatric patients. The hospital will establish a baseline of the number of total geriatric patients visiting the ED in DY2, in order to measure progress going forward.

Rationale:
Geriatric patient populations face unique challenges in obtaining care, and those challenges must be addressed in order for geriatric patients to have effective access to care. Harris County
Hospital District’s DSRIP work groups have identified expanding access to care for seniors as a priority for the region (see “DSRIP Initiative Prioritization/Ranking,” item 71).

Patient navigators assist patients and their families in navigating the fragmented maze of doctors’ offices, clinics, hospitals, out-patient centers, payment systems, support organizations and other components of the healthcare system. Services provided by patient navigators vary by program and the needs of the patient, but often include:

- Facilitating communication among patients, family members, survivors and healthcare providers.
- Coordinating care among providers.
- Arranging financial support and assisting with paperwork.
- Arranging transportation.
- Ensuring that appropriate medical records are available at medical appointments.
- Facilitating follow-up appointments.
- Community outreach and building partnership with local agencies and groups.
- Ensuring access to clinical trials.

Access to the above services is especially imperative for senior patients, as they are often on a fixed income, may have increased problems with mobility, memory, and technological savvy. The Senior Care Coordinator can assist seniors in confronting the challenges associated with access necessary healthcare, in order to prevent the deterioration of otherwise manageable conditions and to improve the quality of life for seniors.

**Project Components:**

HCA will address the project components as follows:

a. **Identify frequent ED users and use navigators as part of a preventable ED reduction program.** Train health care navigators in cultural competency. HCA has identified geriatric patients as a patient population with high rates of ED users. The Senior Care Coordinator will target inpatient seniors for education and intervention aimed at preventing future ED use for non-emergent conditions and/or preventing conditions from becoming emergent in the first place.

b. **Deploy innovative health care personnel, such as case managers/workers, community health workers and other types of health professionals as patient navigators.** HCA will recruit and retain a qualified health worker to be the Senior Care Coordinator, with special consideration for candidates who have experience working with the senior community.
c. **Connect patients to primary and preventive care.** The Senior Care Coordinator’s main function will be to assist seniors in making primary and preventative care appointments, determining the assistance necessary to help seniors keep those appointments, and to work with seniors and their families to assure that their access to support (financial, transportation, in-home care, etc) is adequate.

d. **Increase access to care management and/or chronic care management, including education in chronic disease self-management.** Currently, senior patients at the hospital do not have access to a dedicated care coordinator to assist in self-management education and chronic care management. The Senior Care Coordinator will be dedicated to providing those services.

e. **Conduct quality improvement for project using methods such as rapid cycle improvement.** Activities may include, but are not limited to, identifying project impacts, identifying “lessons learned,” opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations. As part of Milestone 5, HCA will participate in learning collaboratives with other Performing Providers engaging in Care Navigation to share lessons learned, identify best practices, and discuss key challenges.

**Unique community need identification number the project addresses:**

- CN.1 - Inadequate access to primary care
- CN.6 - Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly
- CN.7 - Insufficient access to care coordination practice management and integrated care treatment programs
- CN.8 - High rates of inappropriate emergency department utilization
- CN.9 - High rates of preventable hospital readmissions
- CN.10 - High rates of preventable hospital admissions
- CN.11 - High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including: Cancer, Diabetes, Obesity, Cardiovascular disease, Asthma, AIDS/HIV
- CN. 20 - Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs
- CN.23 - Lack of patient navigation, patient and family education and information programs

**How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:**

Currently, West Houston Medical Center does not provide patient navigation services for the senior population, thus this project is a brand-new initiative for this hospital.
**Related Category 3 Outcome Measures:** OD-3 Potentially Preventable Re-Admissions; IT 3.1 All cause 30 day readmission rate – NQF 1789 (for patients enrolled in care navigation services).

**Reasons/rationale for selecting the outcome measure(s):**

HCA chose this Category 3 Outcome because one of the important goals behind implementing the Senior Care Coordination program is to reduce the number of PPRs, which should be indicative of improved health outcomes and patient quality of life. PPRs are disruptive and often have a substantial impact on a patient’s chance of long-term recovery, and PPRs add hefty additional costs to the healthcare delivery system that should be preventable through improved access to primary and preventative care. Additionally, through reducing PPRs, a larger goal of getting the patient appropriate care in the appropriate setting is accomplished. Many patients do not have a primary care provider, or information, or access to an ambulatory setting. As part of this project, HCA West Houston will focus on increasing awareness of community resources so that patients in these vulnerable populations can seek care in a more appropriate venue.

**Relationship to Other Projects:** This project is part of HCA’s larger plan of expanding and developing specialty services along with delivery improvements targeted to particular populations (e.g., OB/GYN patients and behavioral health patients), while improving access to care.

**Relationship to Other Performing Providers’ Projects in the RHP:** The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

**Plan for Learning Collaborative:** We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Project Valuation:**

**Approach for valuing project:** The valuation of each HCA project takes into account the degree to which the project accomplishes the triple-aim of the Waiver: community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project.
**Rationale for project valuation:** Specifically, the valuation of this project incorporates the need for improved access to care and quality of care among Region 3 geriatric patient populations, and the potential for sustainable improvement in this area as a result of implementing this project. This project will require development of standardized protocols and procedures for identifying, tracking, and following up with geriatric patients. This project, a global system to improve outcomes for geriatric patients, many of whom have difficulty accessing care due to illness, will require training to ensure that personnel are prepared to assist in the unique needs of the elderly population. HCA will also be hiring at least one dedicated patient navigator for this program, and train a significant number of current staff to provide higher quality care. The valuation also takes accounts for the emphasis that the Region 3 DSRIP work groups have placed on the expansion of access to care for seniors. In addition to patient benefits, projects that seek to increase access to ambulatory health care settings will result in an overall cost-savings to the healthcare delivery system. It is clear that the rising costs of healthcare must be curbed to maintain a stable delivery system. Region 3 is focused on getting patients out of the ED for non-acute conditions, and ensuring that each patient has the information and referrals necessary to be seen at a community primary care provider.

| Year 2 (10/1/2012 – 9/30/2013) | Milestone 1 [P-2]: Establish/expand a health care navigation program to provide support to patient populations who are most at risk of receiving disconnected and fragmented care including program to train the navigators, develop procedures and establish continuing navigator education.  
Metric 1 [P-2.1]: Number of people trained as patient navigators  
Baseline/goal: to recruit, retain, and train one (1) Senior Care Coordinator, dedicated to providing navigation services to geriatric patients  
Data Source: Patient Navigation program materials  
Estimated Baseline: In 2012, the facility had about 41,000 Medicare, Medicaid and Self-pay geriatric presentations in the ED.  
Milestone 1 Estimated Incentive Payment (maximum amount): $3,222,996 |
| Milestone 2 [P-3]: Provide care/management/navigation services to targeted patients.  
Metric 1 [P-3.1]: Increase in the percent of targeted patients enrolled in the program  
Baseline/goal: accomplish enrollment of at least 10% of geriatric patients identified at the West Houston facility  
Data source: Enrollment reports |
| Milestone 2 Estimated Incentive Payment: $1,758,058 |
| Milestone 3 [P-X1]: Establish a baseline  
Metric [P-X1.1]: ED visits and/or hospitalizations  
Goal: establish a baseline number of ED visits and/or avoidable hospitalizations for patients initially enrolled in the care navigation program during DY 3, in order to measure progress going forward.  
Data source: EHR, navigation program database, ED records, inpatient records |
| Milestone 3 Estimated Incentive Payment: $1,758,058 |

| Year 3 (10/1/2013 – 9/30/2014) | Milestone 4 [I-6]: Increase number of PCP referrals for patients without a medical home who use the ED, urgent care, and/or hospital services  
Metric 1 [I-6.2]: percent of patients without a primary care provider (PCP) who received education about a primary care provider (PCP) who received education about a primary care provider in the ED  
Goal: Currently, there is no process in place to systematically ensure that patients receive information specific to primary care resources in the community. Baseline: 0 patients receiving standardized educational materials. We hope to increase the number of patients receiving education to 1,000 by DY4.  
Milestone 4 Estimated Incentive Payment: $1,763,168 |
| Milestone 4 Estimated Incentive Payment: $1,763,168 |
| Milestone 5 [P-8]: Participate in face-to-face learning at least twice per year with other providers and the RHP to promote collaborative learning around similar projects.  
Metric 1 [P-8.1]: Participate in semi-annual face-to-face meetings or seminars organized by the RHP  
Baseline/Goal: West Houston hopes to share ideas with other providers |
| Milestone 5 Estimated Incentive Payment: $2,913,061 |

| Year 4 (10/1/2014 – 9/30/2015) | Milestone 6 [I-7]: Reduce number of ED visits and/or avoidable hospitalizations for patients enrolled in the navigator program  
Metric 1 [I-7.1]: ED visits and/or avoidable hospitalizations  
Goal: decrease ED visits by geriatric patients enrolled in the navigation program by 7% over baseline  
Data Source: EHR, navigation program database, ED records, inpatient records |
| Milestone 6 Estimated Incentive Payment: $2,913,061 |

| Year 5 (10/1/2015 – 9/30/2016) | Milestone 6 [I-6]: Increase number of PCP referrals for patients without a medical home who use the ED, urgent care, and/or hospital services  
Metric 1 [I-6.2]: percent of patients without a primary care provider (PCP) who received education about a primary care provider in the ED  
Goal: HCA will increase the number of patients receiving education to 1,500 by DY4.  
Estimated patient impact: 4,150 total patients in the patient navigator program |
<p>| Milestone 6 Estimated Incentive Payment: $2,913,061 |</p>

Category III
Baylor College of Medicine
Pass 1
Title of Outcome Measure (Improvement Target): IT-12.6 Other: Reduction of STI Rate among Adolescents and Young Adults

Unique RHP outcome identification number(s): 082006001.3.1
Performing Provider Name/TPI: Baylor College of Medicine/082006001

Outcome Measure Description:
Because this is a new clinic, process milestone P-2 was selected to establish the baseline to which improvement will be compared. Outcome improvement target IT-1.20 was selected; the measure will be reduction in STI (chlamydia, gonorrhea and syphilis) rates by 5% compared to the baseline in DY5.

Process Milestones:
- DY3: P-2
- DY2: P-1

Outcome Improvement Target(s):
- DY4: IT-12.6
- DY5: IT-12.6

Rationale:
Because the Baylor Teen Health Clinic (BTHC) focuses on prevention, the proposed Category 3 measure is reduced STI rate. The primary prevention milestones identified on the Category 3 do not address the salient health issues faced by adolescents and young adults. Because STIs disproportionately affect this population, the STI rate is a more appropriate metric that clearly measures the success of the STI counseling proposed in the Category 1 improvement measures. Because the goal is to reduce the rate among the population served by the BTHC, baseline data will be established during the first full year the clinic is operational (DY3). The mission of the BTHC is to provide access to affordable care for at-risk, underserved teens in the community. By reducing STI rates and associated sequelae the BTHC will help its young patients avoid long-term health effects associated with STIs.

Outcome Measure Valuation:
The value of this project was determined by an econometrics assessment of STI treatment. Researchers at the CDC have evaluated the cost effectiveness of STI treatment\(^1\) and developed formulae to assess the direct and indirect cost savings of education, screening and treatment. The formula developed for HIV costs averted by HIV counseling and testing was used to calculate the estimated bundle amount for STI counseling, as HIV counseling is included in all STI education, and screening is available to all patients. The estimated bundle amount for STI treatment was based on the pro rata sequelae costs averted for the treatment of gonorrhea, which is a more conservative estimate than that for treatment of chlamydia or syphilis, and it is estimated that 90% of patients treated will be women. The value for decreases in STI rates is based on treatment and pro rata sequelae costs averted because of reductions in the infections in the population, assuming the reductions occur in a patient population of 1,000 patients, or 10 cases avoided per percentage point reduction.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $ 34,550*
**Title of Outcome Measure (Improvement Target):** IT-12.6 Other: Reduction of Pregnancy Rates among Adolescents and Young Adults

**Unique RHP outcome identification number:** 082006001.3.2

**Performing Provider Name/TPI:** Baylor College of Medicine/082006001

**Outcome Measure Description:**
Because this is a new clinic, process milestone P-2 was selected in order to establish the baseline to which we can compare outcomes. Outcome IT-1.20 was selected to measure reduction in pregnancy rates by 2% compared to the baseline in DY5.

**Process Milestones:**
- DY2: P-1
- DY3: P-2

**Outcome Improvement Target(s):**
- DY4: IT-12.6
- DY5: IT-12.6

**Rationale:**
Because the BTHC focuses on prevention, the proposed Category 3 measure is reduced pregnancy rates. Pregnancy reduction is an appropriate measure for this population. The chronic disease milestones identified in Category 3 pertain to improvements in low birth weight, infant mortality, etc., which do not apply if pregnancy is avoided altogether. The primary prevention milestones also do not address the salient health issues of adolescents and young adults. Decreasing teen pregnancies and births will indicate that the BTHC succeeds in providing access to family planning and contraception services. Because the goal is to reduce the rate among the population served by the BTHC, baseline data will be established during the first full year the clinic is operational (DY3). The mission of the BTHC is to provide access to affordable care for at-risk, underserved teens in the community. By reducing teen pregnancy, the BTHC will help its young patients become contributing members of society.

Based on our experience at other Baylor Teen Health Clinics, reducing pregnancy rates takes time as we make the existing population aware of available services. Moving into a new population or geographic area means that we must ramp up our communications efforts. In the first years, pregnant patients come to our clinics to take advantage of prenatal and parenting services. They then use our services to avoid a second unplanned pregnancy. It typically takes up to five years achieve a 5% reduction in pregnancy rates. The speed of reduction increases as the population becomes more aware of our services and takes advantage of them.

**Outcome Measure Valuation:**
The value of this project was determined by an econometrics assessment of teen pregnancy. The National Campaign determined that the average cost to taxpayers for teen births between 1991
and 2004 was $15.1 billion\(^2\), or an average of $20,000 per birth. This cost includes medical expenses, welfare services and productivity loss. The costs averted are broken further into episodic costs of $5,000 for the cost of delivery and healthcare for mother and child the first year after birth. The remaining $15,000 is prorated for the life of the Waiver. Based on the average birth rate for Harris County, successful family planning will help us avoid an additional 63 births per 1,000 patients. Teen pregnancy rates in the neighborhoods currently serviced by the Teen Clinic are higher than the Harris County average. By reducing the pregnancy rate, we will achieve additional savings in healthcare costs and taxpayer burden that are not duplicated in the estimated bundle for the rendering of contraception management services.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $258,800
**Title of Outcome Measure (Improvement Target):** IT-1.10 Improved HbA1c Control

**Unique RHP outcome identification number(s):** 082006001.3.3

**Performing Provider Name/TPI:** Baylor College of Medicine/082006001

**Outcome Measure Description:** Because this is a new clinic, process milestone P-2 was selected in order to establish the baseline to which we can compare outcomes. Outcome IT-1.10 was selected to measure improvement in Diabetes care control by 15% in DY5 compared to the baseline.

**Process Milestones:**
- DY2: P-1
- DY3: P-2

**Outcome Improvement Target(s):**
- DY4 and DY5: IT-1.10 Improve Hb1Ac control showing increased improvement year over year

**Rationale:** The Fifth Ward has been identified as a medically underserved area and is predominantly comprised of residents who identify themselves as Black, Hispanic or Latino. Improvements in HbA1c control can improve patient quality of life and cost of care by reducing the lifetime incidence of blindness, end-stage renal disease (ESRD) and coronary artery disease. Black and Hispanic patients have higher rates of diabetes and higher mortality rates due to diabetes than white patients. African Americans are more likely to develop ESRD. This measure will reflect the Fifth Ward Clinic’s success in implementing continuous process improvements to improve patient outcomes.

**Outcome Measure Valuation:** The value of weight reduction was calculated based on the percentage of the population that is obese and not currently diagnosed with diabetes. Of those patients, it is expected that a 5-7% reduction in weight will reduce the risk of diabetes by 58%. The annual savings was applied to the number of diabetes cases avoided due to weight management for the duration of the Waiver.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD**

(Add outcome amounts over DYs 2-5): $543,300
Title of Outcome Measure (Improvement Target): IT-1.20 Improved Weight Control

Unique RHP outcome identification number(s): 082006001.3.4
Performing Provider Name/TPI: Baylor College of Medicine/082006001

Outcome Measure Description:
Because this is a new clinic, process milestone P-2 was selected in order to establish the baseline population. Outcome IT-1.20 other outcome improvement target was selected to measure weight loss of at least 5% in 10% of the target population by DY5.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:
- DY4 and DY5: IT-1.20 Improve weight control showing increased improvement year over year

Rationale:
The Fifth Ward has been identified as a medically underserved area\(^7\) and is predominantly comprised of residents who identify themselves as Black, Hispanic or Latino\(^8\). Weight management is a proposed outcome measure under option IT-1.20. According to the Health of Houston Survey in 2010, 32% of Houston area adults were obese, compared to 29% across the State of Texas\(^5\) with a high prevalence among non-Hispanic blacks (51% higher) and Hispanics (21% higher)\(^10\). Obese patients face a higher risk of developing diabetes\(^11\), and weight loss can significantly reduce that risk\(^12\). Helping patients achieve healthier weights can reduce mortality and morbidity and their attendant costs associated with diabetes as well as, creating an overall healthier population with decreased risk of other medical complications.

Outcome Measure Valuation:
The value of weight reduction was calculated based on the percentage of the population that is obese\(^18\) and not currently diagnosed with diabetes\(^20\). Of those patients, it is expected that a 5-7% reduction in weight will reduce the risk of diabetes by 58\(^21\). The annual savings\(^21\) was applied to the number of diabetes cases avoided due to weight management for the duration of the Waiver.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $139,800

---

**Data Source:**
- Project plan document.
- EHR.
**Title of Outcome Measure (Improvement Target):** IT-12.2 Improved Cervical Cancer Screening

**Unique RHP outcome identification number(s):** 082006001.3.5

**Performing Provider Name/TPI:** Baylor College of Medicine/082006001

**Outcome Measure Description:** Because this is a new clinic, process milestone P-2 was selected in order to establish the baseline to which we can compare outcomes. Outcome IT-12.2 was selected to improve cervical cancer screening rates by 10% over the baseline by DY5.

**Process Milestones:**
- DY2: P-1
- DY3: P-2

**Outcome Improvement Target(s):**
- DY4 and DY5: IT-12.2 Increase cervical cancer screening showing improvement year over year

**Rationale:** The clinic’s goals include ensuring access to timely preventative care. Improvement in cervical cancer screening was selected from this outcome domain in order to measure the clinic’s success in achieving this goal. It is complimentary to the other outcome measures as an additional screening and preventative measure ensuring that the health and well being of this target population is maintained.

Improvements in cervical cancer screening can reduce the incidence of cervical cancer by as much as 93%, while also decreasing associated mortality and lowering treatment costs\(^\text{13}\). Black and Hispanic women have much higher rates of incidence and mortality when compared to the general population,\(^\text{14}\) of which is a large percentage of this target population\(^\text{15}\).

**Outcome Measure Valuation:** The value of cervical screening was based on the differential costs of treating localized lesions and cancers and treating regional and distant cancers\(^\text{16}\). The initial, interim and pro rata final stage costs are calculated based on the current incidence of cancer rates in Texas\(^\text{17}\) and the reduction of invasive rates when screening occurs every two years.

---

### Improved Cervical Cancer Screening

**Starting Point/Baseline:**
- **Year 2** (10/1/2012 – 9/30/2013): Process Milestone 1 [P-1]: Complete project plan.
  - Data Source: Project plan document.
  - Process Milestone 1 Estimated Incentive Payment: $7,200
- **Year 3** (10/1/2013 – 9/30/2014): Process Milestone 2 [P-2]: Establish baseline percentage of women who received a PAP within the past two years.
  - Data Source: EHR
  - Process Milestone 2 Estimated Incentive Payment: $16,000
- **Year 4** (10/1/2014 – 9/30/2015): Outcome Improvement Target 1 [IT-12.2]: Improve percentage of women who received a PAP within the past two years, 5% improvement over baseline.
  - Data Source: EHR
  - Outcome Improvement Target 1 Estimated Incentive Payment: $25,700
- **Year 5** (10/1/2015 – 9/30/2016): Outcome Improvement Target 2 [IT-12.2]: Improve percentage of women who received a PAP within the past two years, 10% improvement over baseline.
  - Data Source: EHR
  - Outcome Improvement Target 2 Estimated Incentive Payment: $36,700

#### Yearly Estimated Outcome Amounts:
- **Year 2** Estimated Outcome Amount: $7,200
- **Year 3** Estimated Outcome Amount: $16,000
- **Year 4** Estimated Outcome Amount: $25,700
- **Year 5** Estimated Outcome Amount: $36,700

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $85,600
Title of Outcome Measure (Improvement Target): IT-12.6 Other: Increase in HPV Vaccinations among Adolescents and Young Adults.

Unique RHP outcome identification number(s): 082006001.3.6
Performing Provider Name/TPI: Baylor College of Medicine/082006001

Outcome Measure Description:
Because this is a new clinic, process milestone P-2 was selected to establish the baseline to which improvement will be compared. Outcome improvement target IT-12.6 was selected; the measure will be increase in age-appropriate immunization rates by 10% compared to the baseline in DY5.

Process Milestones:  
- DY3: P-2  
- DY2: P-1

Outcome Improvement Target(s):  
- DY4: IT-12.6  
- DY5: IT-12.6

Rationale:
Because the Baylor Teen Health Clinic (BTHC) focuses on prevention, the proposed Category 3 measure is increased vaccinations for HPV. The primary prevention milestones identified on the Category 3 protocol do not address the salient health issues faced by adolescents and young adults. Although the BTHC provides catch-up immunizations for common infectious diseases for patients who need them, HPV was selected because it is usually given in this age group and provides protection against the most common STI among youth. At nearly 7 million new infections diagnosed annually\(^\text{18}\), the majority of cases are high-risk HPV strains\(^\text{19}\). The CDC estimates that 21,000 cancer cases annually could be prevented by HPV vaccines\(^\text{20}\). Providing HPV vaccinations to both young men and women can reduce HPV transmission rates and prevent some types of HPV-related cancers, thereby reducing overall healthcare costs associated with HPV.

Outcome Measure Valuation:
The value of HPV vaccinations was based on the cost of cervical cancer treatment only and assumes that 30% of cases would not otherwise be prevented. After considering the local rates of cervical cancer, the value of HPV vaccinations was based on the costs of treating localized lesions as well as regional and distant cancers\(^\text{21}\). The initial, interim and pro rata final stage costs are calculated based on the current incidence of cancer rates in Texas\(^\text{22}\).

---

Bayshore Medical Center
Pass 1
**Title of Outcome Measure (Improvement Target):** Category 3: Quality Improvements: Outcome Domain 8: Perinatal Outcomes Improvement Target 8.2: Percentage of Low Birth Weight births

**Performing Provider Name/TPI:** HCA Bayshore Medical Center/020817501

**Unique RHP outcome identification number(s):** 020817501.3.1

**Outcome Measure Description:**
Bayshore will reduce the number of infants born to mothers seen at its three local OB/GYN clinics with low birth weight, defined as infants weighing less than 2500 grams at birth. Bayshore will achieve this outcome by providing earlier and more consistent care to expectant mothers, and increased education about maintaining a health pregnancy, which will improve the health outcomes of these pregnancies (both for the infants and the mothers). Healthily maintained pregnancies are more likely to produce full-term babies, and also to produce developmentally on-target infants, both of which should cause higher, healthier birth weights than may have otherwise resulted.

**Process Milestones:**
HCA chose its DY 2-3 process milestones in order to establish a baseline rate of low birth weights for infants born to mothers treated at Bayshore’s clinics (by which to measure progress going forward), and to develop a plan for making sure that the expanded OB/GYN capacity translates into improved health for newborns, including a healthy birth weight.

**Rationale:**
HCA selected this outcome because low birth weight is associated with myriad of immediate and long-term health problems, including feeding issues, inhibited growth, cognitive and developmental delays, and chronic diseases later in life. Harris County newborns suffer from a higher rate of low-birth weight than the statewide average, making this an important outcome for Bayshore’s community. Factors related to the expectant mother that can result in low-birth weight include smoking, drinking alcohol, diabetes, heart disease, poor nutrition, and stress. Increased access to OB/GYN services will allow mothers at risk for infants with low-birth weight to receive the education, support, and skills necessary to address these factors before or during pregnancy, thereby reducing the likelihood of giving birth to a child under 2500 gram in weight. Additionally, the cost of treating newborns with low birth weight is hard to measure, as it can lead to so many other health problems in the near and distant future. Needless to say, the systemic cost savings associated with preventing low birth weight would have a meaningful impact on the delivery system and allow for reinvestment of funds into much-needed primary and preventative care.

**Outcome Improvement Targets for each year:**
During DY2, HCA will determine the percentage rate of improvement it will target in DYs 4-5. Upon determining the baseline and creating a plan for improving patient education, awareness, and health during pregnancy, Bayshore will determine in DY3 reasonable, yet impactful, percentages of improvement to target.
**Outcome Measure Valuation:**
The valuation of each HCA Bayshore Category 3 outcome takes into account the degree to which the project accomplishes the triple-aims of the Waiver, addresses community needs, benefits the population served by the project, and the investment required to implement the project. The value of this outcome incorporates the potential health benefits for infants born at a healthy weight, the increased satisfaction for the mothers and families of the healthy infants, and the immediate and long-term cost savings associated with providing health care to these infants as they mature.
**Perinatal Outcomes: Percentage of Low birth weight births**

**Title of Outcome Measure (Improvement Target):**

Outcome Domain 3: Potentially Preventable Re-Admissions – 30 day Readmission Rates (PPRs)
Improvement Target: 3.8: Behavioral Health / Substance Abuse 30 day readmission rate

**Unique RHP outcome identification number(s):** 020817501.3.2

**Performing Provider/TPI:** Bayshore Medical Center/20817501.

**Outcome Measure Description:**
HCA chose this outcome because one expected outcome of the implementation of tele-psychiatry services at Bayshore and other HCA hospitals in the area is an improvement in the clinical indicators for BH/SA patients. Reduced wait times in the ED for treatment and/or referral to the appropriate care setting is the clinical indicator that Bayshore will measure, as this aspect of the patient’s experience in the health care system is tied to improved patient outcomes and reduction in the BH/SA readmission rate.

**Process Milestones:**
Bayshore chose its DY2 milestone in order to establish the average wait times experienced by BH/SA patients (as a primary or secondary diagnosis) in the EDs at the hospitals participating in the tele-psychiatry program. Bayshore will use this number as a baseline by which to measure improvement going forward.

**Outcome Improvement Target(s) for each year:**
During DYs 3-5, Bayshore will measure the BH/SA readmission rate against the baseline set in DY3, with a 10% improvement in DY4, and a 15% improvement over DY3 in DY5.

**Rationale:**
Bayshore selected this project for several reasons. First, most of Houston is comprised of federally-designated Health Provider Shortage Areas (including Harris County Hospital District, and many geographical areas within and around Houston) in the domain of mental health. The shortage of providers results in a disparity in the access to primary, preventative, and specialty care for residents requiring BH/SA health care. As a result of this issue, many patients present at East Houston, West Houston, or Woman’s Hospital for BH/SA treatment, and languish in the ED for hours or even days because they simply do not have the capabilities to properly assess their conditions, provide treatment, or refer these patients to the appropriate setting. At Bayshore, there are limited provider resources to treat these patients (being the only hospital in this network with psychiatric beds), meaning that the patients also spend more time than they should in the ED, which takes beds from emergent patients.

By increasing access to these much needed psychiatric services, and providing a more efficient assessment via tele-psychiatry, patients will receive the care they need in a more timely manner. This increased access to services will improve health outcomes by assessing the patient more quickly, which will allow treatment to begin more quickly. This outcome measure will focus on reducing the readmission of this target population, which will be a savings to the overall healthcare delivery system, as the average cost on a BH inpatient stay at Bayshore is $3,723.00. Inpatient stays have a negative impact on patient short-term health outcomes, and reduce patient satisfaction and quality of life. For
each of these reasons, Bayshore will use the BH/SA readmission rate as a clinical indicator of improvement for this group identified as traditionally underserved by the healthcare system.

**Outcome Measure Valuation:**
The valuation of each HCA Bayshore Category 3 outcome takes into account the degree to which the project accomplishes the triple-aims of the Waiver, addresses community needs, benefits the population served by the project, and the investment required to implement the project. The value of this outcome lies in the potential for improvement to BH/SA patient outcomes and satisfaction, as well as reducing the incidence of readmission of this population by providing more efficient and timely assessment of each patient.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $3,894,374
City of Houston Department of Health and Human Services

Pass 1
Project Option - Project Option 1.8.9 - Expansion of school-based sealant and/or fluoride varnish programs that provide sealant placement and/or fluoride varnish applications to otherwise un-served school-aged children by enhancing dental workforce capacity.

**Unique Project ID:** 0937740-08.1.1

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** This new project will improve dental health in Medicaid/CHIP or indigent populations by:
1) expanding new diagnostic, preventive, restorative, and surgical oral health services for safety net eligible persons,
2) expanding an evidence-based dental sealant program for elementary school children in low income areas
3) initiating new diagnostic, preventive, restorative, and surgical oral health services for eligible perinatal women through three months post-partum.

**Need for the Project:** The performing provider anticipates treating fewer cases of Early Childhood Caries (ECC) among the child patients (<6 years of age) it serves by expanding an existing program that provides screening, oral health education, sealants, and fluoride varnish for at-risk 2nd graders that are on CHIP/uninsured.

**Target Population:** The primary target population will be at risk 2nd graders that are in schools with a high proportion of minority and low income families. The secondary target group will be eligible perinatal women through post-partum.

**Category 1 or 2 expected patient benefits:** Increase by 5% over baseline the number of special population members that access services in past 12 months in DY4 and increase by 10% over baseline the number of special population members that access services in past 12 months.

a) For Oral Health for At Risk Population in DY3 a baseline of 3515 children will receive dental sealants, to increase to 3690 in DY4 and 3875 in DY5.

b) For Dental Safety Net, to decrease number of children with untreated caries, a baseline of 850 will be established in DY3, 807 in DY4 and 767 in DY5.
c) For Perinatal Oral Health, to increase the number of pregnant women who access oral health services, the unduplicated baseline is 300 in DY3, 315 in DY4 and 331 in DY5. For total number of encounters, a baseline of 900 will be established in DY3, 945 in DY4 and 993 in DY5.

Category 3 outcomes: IT-7.1 Dental Sealant: Increase percentage of children age 6-9 with a dental sealant on a permanent first molar tooth by 5% over baseline in DY4 and by 10% over baseline in DY5 IT-7.2 Cavities: Increase percentage of children with untreated dental caries by 2% over baseline in DY4 and by 5% over baseline in DY5.

Title of Outcome Measure (Improvement Target): IT 7.1- Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal

Unique RHP Outcome identification number(s): 0937740-08.3.1

Performing Provider: City of Houston Department of Health and Human Services/ 0937740088

Outcome Measure Description:
IT-7.1 Dental Sealant:
   o Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal

Process Milestones:
   o DY 2
   o Establish Baseline Rates
   o DY3:
   o P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
   o P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:
   • DY 4:
   o IT-7.1 Dental Sealant: Increase by 5% over baseline, Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal
   • DY 5
   o IT-7.1 Dental Sealant: Increase by 10% over baseline, Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal (Non-standalone measure)

Rationale:
The Outcome Improvement target for this project was chosen because application of dental sealants in underserved elementary school children promotes dental health in the future. By increasing the percentage of children who receive dental sealants, this program will promote and enhance dental health in underserved children and help close disparities in dental health. The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for sealant application and dental care. The PDSA cycle will inform systematic data driven program
improvements. Inadequate access to dental services compounds other health issues. It can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic and social consequences. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality regular dental care, both at home and professionally. Increasing, expanding, and enhancing dental services will improve overall health outcomes. The improvement targets are based on the two single most important indicators for childhood dental health. Children who have regular access to a dental provider are more likely to have received dental services that can prevent or treat early dental disease. Additionally, unserved or underserved perinatal women are a specially vulnerable group not only for their own dental health but also for the dental health of their children. Education on the importance of dental health can help promote better dental health in young children.

**Outcome Measure Valuation:**

The Outcome measure was valued at 12.29% of the overall assigned project value for the associated Category 2 project in year 3, 12.29% in Year 4 and 12.29 % in Year 5. HDHHS utilized the following method to determine the Category 2 project value. HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or reoccurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. Oral Health Service Expansion received a composite Prioritization score of 7.65 and a Public Health Impact score of 7.

**Process Milestone 1 [P-2]** Establish baseline rates

**Metric 1:** Calculate baseline rate of dental sealants in children age 6-9 in the Oral Health Program in DY2, months 6-12.

**Goals:** Establish baseline against which improvements can be measured.

**Data Sources:** Program documentation from month 6-12 in DY2.

**Numerator:** # of children age 6-9 years with dental sealant enrolled in the Oral Health Program.

**Denominator:** Total # of children of same age enrolled in the program.

**Milestone 1 Estimated Incentive Payment:** $62,267.21

**Process Milestone 2 [P-4]:** Conduct Plan Do Study Act cycle to continually improve

**Metric 1:** Document use of PDSA in planning process

- Goal: Goal: Ensure highest quality on program process and improvement.

- **Data Source:** Step-wise documentation of PDSA in program documentation.

**Milestone 2 Estimated Incentive Payment:** $72,845.65

**Process Milestone 3 [P-5]:** Disseminate lessons learned and best practices

**Metric 1:** Documentation of best practices

- **Data Source:** Documentation of report.

**Milestone 3 Estimated Incentive Payment:**

**Outcome Improvement Target 1 [IT-7.1]:** Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal).

- **Improvement Target:** Increase rate of dental sealant in children by 5% over baseline (Baseline will be determined in DY2).

- **Data Source:** Program Electronic Records.

**Numerator:** Number of children age 6-9 with a dental sealant on at least one permanent first molar within the measurement period (past 12 months) enrolled in Program.

**Denominator:** Total number of children age 6-9 that have seen a dental provider within the measurement period (past 12 months) enrolled in Program.

**Outcome Improvement Target 1 Estimated Incentive Payment:** $155,094.92

**Outcome Improvement Target 2 [IT-7.1]:** Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal).

- **Improvement Target:** Increase rate of dental sealant in children by 10% over Baseline.

- **Data Source:** Program Electronic Records.

**Numerator:** Number of children age 6-9 with a dental sealant on at least one permanent first molar within the measurement period (past 12 months) enrolled in Program.

**Denominator:** Total number of children age 6-9 that have seen a dental provider within the measurement period (past 12 months) enrolled in Program.

**Outcome Improvement Target 2 Estimated Incentive Payment:** $337,243
### Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $5,700,296.43
Project Option - Project Option 1.8.9 - Expansion of school-based sealant and/or fluoride varnish programs that provide sealant placement and/or fluoride varnish applications to otherwise un-served school-aged children by enhancing dental workforce capacity.

**Unique Project ID:** 0937740-08.1.1

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** This new project will improve dental health in Medicaid/CHIP or indigent populations by: 1) expanding new diagnostic, preventive, restorative, and surgical oral health services for safety net eligible persons, 2) expanding an evidence-based dental sealant program for elementary school children in low income areas 3) initiating new diagnostic, preventive, restorative, and surgical oral health services for eligible perinatal women through three months post-partum.

**Need for the Project:** The performing provider anticipates treating fewer cases of Early Childhood Caries (ECC) among the child patients (<6 years of age) it serves by expanding an existing program that provides screening, oral health education, sealants, and fluoride varnish for at-risk 2nd graders that are on CHIP/uninsured.

**Target Population:** The primary target population will be at risk 2nd graders that are in schools with a high proportion of minority and low income families. The secondary target group will be eligible perinatal women through post-partum.

**Category 1 or 2 expected patient benefits:** Increase by 5% over baseline the number of special population members that access services in past 12 months in DY4 and increase by 10% over baseline the number of special population members that access services in past 12 months.

- a) For Oral Health for At Risk Population in DY3 a baseline of 3515 children will receive dental sealants, to increase to 3690 in DY4 and 3875 in DY5.
- b) For Dental Safety Net, to decrease number of children with untreated caries, a baseline of 850 will be established in DY3, 807 in DY4 and 767 in DY5.
c) For Perinatal Oral Health, to increase the number of pregnant women who access oral health services, the unduplicated baseline is 300 in DY3, 315 in DY4 and 331 in DY5. For total number of encounters, a baseline of 900 will be established in DY3, 945 in DY4 and 993 in DY5.

**Category 3 outcomes:** IT-7.1 Dental Sealant: Increase percentage of children age 6-9 with a dental sealant on a permanent first molar tooth by 5% over baseline in DY4 and by 10% over baseline in DY5. IT-7.2 Cavities: Increase percentage of children with untreated dental caries by 2% over baseline in DY4 and by 5% over baseline in DY5.

**Title of Outcome Measure (Improvement Target):** IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)

**Unique RHP Outcome identification number(s):** 0937740-08.3.2

**Performing Provider:** City of Houston Department of Health and Human Services/ 0937740088

**Outcome Measure Description:**
IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020) (Standalone measure)

**Process Milestones:**
- **DY 2**
  - Develop and test data systems
- **DY3:**
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices

**Outcome improvement targets for each year:**
- **DY 4:**
  - IT-7.2 Cavities: Reduce by 2% over baseline Percentage of children with untreated dental caries (Healthy People 2020) (Standalone measure)
- **DY 5**
  - IT-7.2 Cavities: Reduce by 5% over baseline Percentage of children with untreated dental caries (Healthy People 2020) (Standalone measure)

**Rationale:**
The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for reduction of dental caries. The PDSA cycle will inform systematic data driven program improvements. Inadequate access to dental services compounds other health issues. It can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic and social consequences. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality regular dental care, both at home and professionally. Increasing, expanding, and enhancing dental services will improve overall health outcomes. The
improvement targets are based on the two single most important indicators for childhood dental health. Children who have regular access to a dental provider are more likely to have received dental services that can prevent or treat early dental disease. Additionally, unserved or underserved perinatal women are a specially vulnerable group not only for their own dental health but also for the dental health of their children. Education on the importance of dental health can help promote better dental health in young children.

**Outcome Measure Valuation:**

The Outcome measure was valued at 12.29% of the overall assigned project value for the associated Category 2 project in year 3, 12.29% in Year 4 and 12.29% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. Oral Health Service Expansion received a composite Prioritization score of 7.65 and a Public Health Impact score of 7.
Goal: Utilize a systematic cyclical process for quality improvement Data Source: Program documentation Milestone 2 Estimated Incentive Payment: $72,845.65 Process Milestone 3 [P-5]: Disseminate lessons learned and best practices Metric 1: Documentation of best practices and lessons learned  
Goal: Share lessons learned to add to knowledge base and inform others implementing similar projects Data Source: Program Documentation Milestone 3 Estimated Incentive Payment: $72,845.65 | Outcome Improvement Target 1 [IT-7.2]: Cavities: Percentage of children with untreated dental caries (Healthy People 2020)  
Goal: Reduce by 2% over baseline the percentage of children with dental caries in the Oral Health program. (Baseline TBD in DY 2-3) Data Source: Program Electronic Records Numerator: Number of children with untreated dental caries (past 12 months) enrolled in Program Denominator: Total number of children that have seen a dental provider within the measurement period (past 12 months) enrolled in Program Outcome Improvement Target 1 Estimated Incentive Payment: $155,094.92 | Outcome Improvement Target 2 [IT-7.2]: Cavities: Percentage of children with untreated dental caries (Healthy People 2020)  
Goal: Reduce by 5% over baseline the percentage of children with dental caries in the Oral Health program Data Source: Program Electronic Records Numerator: Number of children with untreated dental caries (past 12 months) enrolled in Program Denominator: Total number of children that have seen a dental provider within the measurement period (past 12 months) enrolled in Program Outcome Improvement Target 2 Estimated Incentive Payment: $337,243 |

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $700,296.43
Project Option 1.7.7 - Implement remote patient monitoring programs for diagnosis and/or management of care for EMS services.

Unique Project ID: 0937740-08.1.2

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The primary performing provider, City of Houston Fire Department Emergency Medical Services (EMS) is the primary EMS authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. The City of Houston is a six-hundred plus square mile area spread out over a 1000 square mile region in Southeast Texas. Each year there are over 200,000 EMS incidents involving over 225,000 patients or potential patients. On average, EMS responds to a citizen every 3 minutes. Each EMS response is made by one of 88 City of Houston EMS vehicles. Thirty seven of these are staffed by two paramedics and provide Advanced Life Support (ALS) capabilities. The primary performing provider serves all Houston residents, providing high quality medical care that is not defined solely in terms of life-saving interventions for critically-ill or injured patients. High quality emergency medical care is defined by the decisions made on each and every patient encounter. These services that benefit all Houston residents, and frequently, support those most in need, such as low income mothers and children, the elderly, and Medicaid and minority populations. The telehealth program population is expected to consist of approximately 30% Medicaid enrollees and approximately 20% indigent population.

Intervention(s): The City of Houston proposes to make use of telecommunications technologies and connectivity to triage patients with non-life threatening, mild or moderate illnesses via telemedicine with an emergency physician at the City of Houston EMS base station. This new program intends to address 3780 new patients/year in DY4 and 3960 new patients in DY5 by telehealth technology by providing access to the Emergency Telehealth and Navigation (ETHAN) program.

Need for the Project: Rising costs of treating patients with non-emergent conditions that access health care at the ER are well documented. Telehealth provides a viable alternative to direct patients with non-life threatening, mild or moderate illnesses, who would have otherwise been transported to an ED for evaluation.

Target Population: This new program will target callers to 9-1-1 who have been evaluated on site by Houston Fire Department (HFD) - Emergency Medical Technicians (EMT) and/or paramedics, and if appropriate, these callers will be directed to the Emergency Tele Health and Navigation (ETHAN) Program to receive appropriate care at the right setting.

Category 1 or 2 expected patient benefits: Improved access to health care services by 5% over baseline in DY4 and by 10%over baseline in DY 5 for residents of communities that did not have such services locally before the program. A baseline of 300 patients per month will be established during DY3 from the time the program is fully implemented. In DY4 the number of patients seen by ETHAN will increase to 315 per month for a total of 3780 for DY4 and to 330 per month for a total of 3960 for DY5.
Category 3 outcomes: **IT-9.4**: (ED appropriate utilization) - Reduce all ED visits that are non-emergent among 911 callers by 5% over baseline in DY4 and by 10% over baseline in DY5.

**Title of Outcome Measure (Improvement Target):** IT-9.4 Other Outcome Improvement Target (ED appropriate utilization)

**Unique RHP Outcome identification number(s):** 0937740-08.3.3

**Outcome Measure Description:**
IT-9.4 Other Improvement Target (ED appropriate utilization of non-life threatening, mild or moderately ill 911 callers). This program provides care coordination, by more accurately assessing the 9-1-1 caller’s needs via telehealth services and provide the patient more appropriate care in a more appropriate setting than the emergency center. The performing provider and its partners expect to see a reduction in ER usage among non-emergent 911 callers by using telecommunications technologies and connectivity to provide access to underserved non-emergent populations that called 911 through improved access to specialists, improved care satisfaction and reduced emergency room usage.

**Process Milestones:**
- **DY2:**
  - [P-3]: Develop and test Data systems
- **DY 3**
  - P-4 : Conduct and Update Plan-Do-Study-Act for quality improvement
  - P-5 : Disseminate findings, lessons learned and best practices

**Outcome Improvement Targets for each year**
- **DY 4:**
  - IT-9.4 Other Improvement Target (ED appropriate utilization - Stand-alone measure) - Reduce all ED visits that are non-emergent (including ACSC) that call into the 911 system by 5% over baseline.
- **DY 5:**
  - IT-9.4 Other Improvement Target (ED appropriate utilization Stand-alone measure) - Reduce all ED visits that are non-emergent (including ACSC) that call into the 911 system by 10% over baseline.

**Rationale:**
Using telecommunications for patient consults to provide medical data, which may include audio, still or live images, between a patient and a health professional for use in rendering a diagnosis and treatment plan is a viable way to make medical care more accessible. The development and installation of high-speed wireless telecommunications networks coupled with large-scale search engines and mobile devices will change healthcare delivery as well as the scope of healthcare services. It will allow for real-time monitoring and interactions with patients without bringing them into a hospital or a specialty care center. This real/near-time monitoring and interacting could enable a healthcare team to address patient problems before they require major interventions, creating a potentially patient-centered approach that could undoubtedly change our expectations of our healthcare system.
Process measures for Project Planning and implementation needs to happen before lessons learned and best practices can be documented. These measures will be conducted in DY 2 and 3 so that outcomes can be measured in DY 4 and 5.

**Outcome Measure Valuation:**
The Outcome measure was valued at 12.21% of the overall assigned project value for the associated Category 2 project in year 3, 12.21% Year 4 and 12.21% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The Care Houston Links Program received a composite Prioritization score of 7.15 and a Public Health Impact score of 7.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (*add outcome amounts over DYs 2-5): $1,391,661.83
Project Option - 2.6.3 Engage community health workers in an evidence-based program to increase health literacy of a targeted population.

**Unique Project ID:** 0937740-08.2.1

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:**

Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** This new project proposes to utilize community health workers to provide 24 sessions of essential education and assessment related to fall prevention and safety to 500 low income older adults during the baseline year. Based on other home visitation programs, the population is expected to be 90% being Black or Hispanic. The program will also provide intervention to reduce hazards in the home to 100 of the 500 low income older adults initially recruited into the program.

**Need for the Project:** The risk for a fall increases exponentially with advancing age. Older adults often seek care at the ER for falls related injuries that are preventable. Preventing falls requires a multifactorial approach with assessment and management. This program will provide education, evaluation/assessment and fall-related hazard mitigation at home and follow up by identifying hazards that impair safety and health in the home as part of an evidence-based fall prevention intervention.

**Target Population:** The project will target older adults aged 60 and referrals and recruitment to this program will be generated by home visitation programs of the performing provider or its partners such as Harris County Area Agency on Aging (HCAAA), Houston Department of Health &Human Services (HDHHS)Tuberculosis (TB) Control and other departmental(Communicable Diseases, etc.) and the target population is expected to be 80% Medicaid.

**Category 1 or 2 expected patient benefits:** Increase access to health promotion programs and activities using innovative program by 5% in DY4 from 500 to 525 home safety educations and from 100 to 105 home inspections and by 10% in DY5 to 550 home safety educations and 110 home inspections.
Category 3 outcomes: **IT-9.4**: (ED appropriate utilization) IT-9.4 Milestone: Other Outcome Improvement Target (ED appropriate utilization – Stand-alone measure)

1) Home Safety/ Perception of Home Safety survey to complete while inspecting homes; and of patients who undergo home inspection, do follow-up calls to determine retention.

2) The number of falls among program participants since the inspection.

3) The % of falls, that resulted in 9-1-1 calls and/or ED visits among program participants. Reduce by 5% each the number of ED visits among program participants and number of 911 calls made for falls in older adults 60 years and over from specific zip codes over baseline in DY4 and by 10% over baseline in DY5.

**Title of Outcome Measure (Improvement Target):** IT-9.4 Other Outcome Improvement Target (ED appropriate utilization)

**Unique RHP Outcome Identification Number:** 0937740-08.3.4

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services / 0937740-08

**Outcome Measure Description:**

IT-9.4 Milestone: Other Outcome Improvement target (ED appropriate utilization (Stand-alone measure))

In 2010, the overall rate of nonfatal fall injury episodes for which a health-care professional was contacted was 43 per 1000 persons. Persons aged > 75 years had the highest rate (115 per 1000 persons) of falls. The primary goal of this program is to prevent fall related accidents that result in Emergency Room (ER) visits. Since the primary recruitment source is the EMS database for 911 calls, this program is expected to reduce 911 calls in targeted high risk zip codes for falls in the home setting. This initiative will implement an Evidence-based Health Promotion Program that utilizes community health workers to increase health literacy, fall prevention intervention and provide minor structural changes in homes of a targeted population. This will be measured based on 3 metrics (listed below).

**Process Milestones:**

- **DY 2**
  - P-3: Develop and test Data systems
- **DY 3**
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices

**Outcome Improvement Targets for each year:**

- **DY 4**
  - IT-9.4 Milestone: Other Outcome Measure (ED appropriate utilization)
    - Home Safety/ Perception of Home Safety survey to complete while inspecting homes; and of patients who undergo home inspection, do follow-up calls to determine retention.
    - The number of falls among program participants since the inspection.
The % of falls, that resulted in 9-1-1 calls and/or ED visits among program participants.

- DY 5
  - IT-9.4 Milestone: Other Outcome Measure (ED appropriate utilization)
    - Home Safety/ Perception of Home Safety survey to complete while inspecting homes; and of patients who undergo home inspection, do follow-up calls to determine retention.
    - The number of falls among program participants since the inspection.
    - The % of falls, that resulted in 9-1-1 calls and/or ED visits among program participants.

**Rationale:**
The “Other Outcome Measure” for Category 3 was chosen for this project because it aligns with the goals of the project. Fall related injury and ensuing visit to the ER is one of the 20 most expensive conditions in community dwelling elderly. Preventable falls among community dwelling elderly result in costly morbidity. According to a new CDC study published in the *Morbidity and Mortality Weekly Report (MMWR)*, an estimated 234,000 people ages 15 and older were treated in U.S. emergency departments (ED) in 2008 for injuries that occurred in bathrooms. Four out of 5 of these injuries were caused by falls—which can have especially serious consequences for older adults. Almost one-third (30 percent) of adults aged 65 and above who were injured in bathrooms were diagnosed with fractures. Among adults aged 85 and older, 38 percent were hospitalized as a result of their injuries. Eliminating hazards at home is one of the recommended strategies for fall prevention in older adults. This Fall Prevention intervention will focus on reducing hazards at home for older adults from specific zip codes so that a costly ER visit is averted.

**Outcome Measure Valuation:**
The Outcome measure was valued at 9.25% of the overall assigned project value for the associated Category 2 project in year 3, 9.25% in Year 4 and 9.25% in Year 5.

Houston Department of Health and Human Services (HDHHS) utilized the following method to determine the Category 2 project value:

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control
Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The Healthy Homes Fall Prevention project received a composite Prioritization score of 5.4 and a Public Health Impact score of 6.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5)*: $1,054,457.51
Project Option 2.9.1 - Provide navigation services to targeted patients who are at high risk of disconnect from institutionalized health care

Unique Project ID: 0937740-08.2.2

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. A similar pilot navigation program served 1074 clients last year, of which 60% were Medicaid patients, 15% were completely uninsured, 60% were African American, 30% were Hispanic and 8% were White and 2% were other race/ethnicity. This expansion project will serve 2000/year from DY4-5.

Intervention(s): CareHouston Links is a new program that proposes to provide care coordination and navigation that will reduce the frequency of non-urgent ambulance runs and ER visits and link 911 callers to appropriate primary and preventive care in lieu of unnecessary emergency room care.

Need for the Project: Current data shows that there are over 100,000 non-emergency transports made by Houston Fire Department (HFD) with certain zip codes having a high percentage of 911 calls. The CareHouston Links project will expand a program that has proven to reduce repeat calls to 911, through the use of face to face follow-up, education and navigation services among those with non-emergent conditions.

Target Population: All individuals that utilize Emergency Room (ER) for non-emergent, primary care needs and are transported by ambulance to the ER, will benefit from this project.

Category 1 or 2 expected patient benefits: During DY3, the program will enroll 80 patients/months in the navigation program. If patients were enrolled on target for 12 months of DY3, then the total number enrolled for DY3 would be 960. Our goal is to increase number of patients enrolled by 5% over baseline in DY4 (to 1008 new patients/year) and 10% over baseline numbers in DY5 (to 1056 new patients/year) the number of PCP referrals for patients without a medical home who use the ED, urgent care, and/or hospital services, and enrolled in the program.

Category 3 outcomes:
IT-9.4: Other Improvement Target (ED Appropriate utilization for those needing non-emergent care and transported by ambulance and enrolled in this program). Our goal is to reduce by 5% below baseline the proportion of non-emergent ED visits (arrived by ambulance transportation) in DY4 and 7% below baseline in DY5 among those enrolled in the program

**Title of Outcome Measure (Improvement Target):** IT-9.4 Other Outcome Improvement Target

**Unique RHP Outcome identification number(s):** 0937740-08.3.5

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Outcome Measure Description:**
IT-9.4 ED–Other Outcome Improvement Target (ED Appropriate Utilization)

- By providing patient navigation, non-emergent 911 callers and those that were seen by EMS can be redirected to the CareHouston Links Program. This program provides care coordination, by more accurately assessing the non-emergent 911 caller’s needs and connecting them to the required services. This will reduce unnecessary repeat calls to 911 and result in savings to the healthcare system.

**Process Milestones:**
- DY2:
  - P-3: Develop and Test Data System
- DY 3:
  - P-4: Conduct and Update Plan-Do-Study-Act for quality improvement
  - P-5: Disseminate findings, lessons learned and best practices

**Outcome Improvement Targets for each year:**
- DY 4:
  - IT-9.4 Other Outcome Improvement Target (ED appropriate utilization (Stand-alone measure) - Reduce ED visits that are non-emergent (including ACSC)
- DY 5:
  - IT-9.4 Other Outcome Improvement Target (ED appropriate utilization (Stand-alone measure) - Reduce ED visits that are non emergent (including ACSC)

**Rationale:**
A version of the proposed CareHouston Links program was previously targeted to the Sunnyside community in Southeast Houston where an HFD-EMS analysis showed that 26% of all 9-1-1 calls were non-emergency related in this low income, underserved community. Since the CareHouston program’s implementation in 2006, the HFD EMS unit experienced a 72% decrease in calls in this area allowing them to divert more than $4.6 million in costs associated with the transport of non-emergency callers to the emergency rooms for services. The CareHouston Links program will reduce future emergency room visits by providing navigation services to clients, educating them about the appropriate use of services and linking them with primary and preventive care services. Ineffective navigation of the health care system by patients may lead to poorer outcomes and inefficiencies because of delayed care, failure to receive proper care or treatments, or care being received in more expensive locations (i.e., emergency rooms).

Linking, assessing and referring clients to appropriate services will reduce their need to use emergency services. Each time an ambulance service is dispatched to transport patients; the cost is approximately $1470. During Fiscal Year 2012, the Care Houston program diverted...
1,458 clients from using EMS transports to emergency departments for non-emergencies, saving the COH $2,143,260. Each diverted ambulance transport is also associated with a diverted emergency room visit.  

The Other Improvement Target for Reducing Inappropriate ER Use, will be used as our Category 3 Outcome measure. According to Agency for Healthcare Research and Quality, visits to the Emergency Department for non emergent care results in increasing health care costs and overcrowding. A report from Health and Human Services Commission on Rider 56, House Bill 1, from August 2012, states “one of the key strategies to reducing non-emergent ED use is to steer clients to more appropriate sources of care. Integral to achieving this goal is ensuring adequate access to prevention and primary care services. The medical home model is a building block to achieving this objective as is promoting the use of urgent care facilities and retail health clinics when clients cannot go to their medical home.” (Article II, Health and Human Services Commission, Rider 56, H.B. 1, 82nd Legislature, Regular Session, 2011).

**Outcome Measure Valuation:**

The Outcome measure was valued at 11.41% of the overall assigned project value for the associated Category 2 project in year 3, 11.41% in Year 4 and 11.41% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The CareHouston Links Program received a composite Prioritization score of 7.15 and a Public Health Impact score of 7. The following are avenues of cost savings to the health care system that can be facilitated by a program that seeks to reduce ER usage, such as CareHouston Links.

1. Cost savings attributed to using navigators as part of a preventable ED reduction program
2. Cost savings related to connecting patients to medical homes, increase access to primary and specialty care, and increase access to chronic care management
3. CMS reimbursement rate for EMS transports; Cost savings to CMS when alternate transportation is used
4. Cost savings to CMS for ED visit redirected to a clinic

### Starting Point/Baseline:

**Baseline will be established in DY 2-3**

### Year 2

**Starting Point/Baseline:**

- **(10/1/2012 – 9/30/2013)**

**Process Milestone 1 (P-3):** Develop and Test Data System

- **Metric 1:** Provide documentation of IT resources and system needed

- **Metric 2:** Documentation of testing and installation of data system
  - Goal: Set up a workable electronic system through which effective and efficient data can be collected.
  - Data Source: Program documentation and electronic system.

**Process Milestone 1 Estimated Incentive Payment:** $115,664.23

### Year 3

**Starting Point/Baseline:**

- **(10/1/2013 – 9/30/2014)**

**Process Milestone 2 (P-4):** Conduct Plan Do Study Act cycle to continually improve

- **Metric 1:** Document use of PDSA in planning process
  - Goal: Ensure highest quality on program process and improvement.
  - Data Source: Step-wise documentation of PDSA in program documentation

**Process Milestone 2 Estimated Incentive Payment:** $135,314.19

**Process Milestone 3 (P-5):** Disseminate lessons learned and best practices

- **Metric 1:** Documentation of best practices and lessons learned
  - Goal: Provide report documenting identification of best practices and lessons learned
  - Data Source: Documentation of report

**Process Milestone 3 Estimated Incentive Payment:** $135,314.19

### Year 4

**Starting Point/Baseline:**

- **(10/1/2014 – 9/30/2015)**

**Outcome Improvement Target 1 (IT-9.4):** Other Improvement Target (Stand-alone measure)

- **Improvement Target:** Reduce all ED visits that are non-emergent (including ACSC) in specific zip codes due to participation in Navigation Program by 5% below baseline the proportion of non-emergent ED visits

- **Data source:** Program data electronic records, EMS Data (Baseline will be established in Yr. 2-3 from program data by establishing the proportion of non-emergent 911 callers that were connected to CareHoustonLinks.)

**Outcome Improvement Target 1 Estimated Incentive Payment:** $288,096.03

### Year 5

**Starting Point/Baseline:**

- **(10/1/2015 – 9/30/2016)**

**Outcome Improvement Target 2 (IT-9.4):** Other Improvement Target (Stand-alone measure)

- **Improvement Target:** Reduce all ED visits that are non-emergent (including ACSC) in specific zip codes due to participation in Navigation Program by 5% below Yr. 4 the proportion of non-emergent ED visits that were averted during enrollment in the program

**Data source:** Program data electronic records, EMS Data

**Numerator:** Non Emergent 911 callers connected to CareHouston Links, who would have otherwise been transported to ED

**Denominator:** All non-Emergent 911 callers

**Outcome Improvement Target 2 Estimated Incentive Payment:** $626,444.56

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD *(add outcome amounts over DYs 2-5)*: $1,300,833.19
**Project Option - Project Option 2.9.1- Establish/Expand a Patient Care Navigation Program**

**Unique Project ID:** 0937740-08.2.3

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs.

**Intervention(s):** This expansion project will use patient navigators to connect 270 new at risk HIV diagnosed individuals to appropriate care in the baseline year. Linkage to care will consist of active referrals to primary medical care, mental health, substance abuse, support services, and services for basic needs such as food and housing. Utilizing a Community-Based (Non-Medical) Case Management model, this program will also Identify frequent ED utilizers and use navigators as part of a preventable ED reduction program.

**Need for the Project:** Newly diagnosed HIV patients are frequently at risk for receiving fragmented care because of being disconnected from the health care system. This project will support HIV patients through the continuum of health care services so that patients can receive coordinated, timely services when needed with smooth transitions between health care settings. The race/ethnicity of patients in HIV linkage program last year were 68% African American, 29% Hispanic and 3% White.

**Target Population:** Newly diagnosed HIV patients will be the target group for this project. In particular, belonging to high risk groups such as males, blacks/African Americans, and Injection drug users will be the targets because they are known to have lower service linkage rates than the average for the Houston region.

**Category 1 or 2 expected patient benefits:** Increase number of PCP referrals for indigent or Medicaid patients without a medical home who use the ED, urgent care, and/or hospital services by 5% over baseline (baseline of 275 patients) in DY4 (288 patients in DY4) and by 10% over baseline in DY5 (303 patients in DY5).

**Category 3 outcomes:**

**IT-9.4:** (ED appropriate utilization) Reduce by 5% each the number of ED visits among program participants in HIV Linkage Program and number of from specific zip codes over baseline in DY4 and by 10% over baseline in DY5.
Title of Outcome Measure (Improvement Target): IT-9.4 Other Outcome Improvement Target(ED appropriate utilization)(Stand-alone measure)

Unique RHP Outcome identification number(s): 0937740-08.3.6

Outcome Measure Description:
IT-9.4 Other Outcome Improvement Target(ED appropriate utilization)
The performing provider proposes to provide navigation services to targeted HIV patients who are at high risk of disconnect from institutionalized health care is critical to reduce ED and inpatient use for potentially preventable admissions in HIV patients. Providing navigation services to targeted HIV patients who are at high risk of disconnect from institutionalized health care is critical to reduce ED and inpatient use for potentially preventable admissions in HIV patients.

Numerator: Number of HIV patients enrolled in program that used ER in past 6 months
Denominator: Total number of HIV patients enrolled in Service Linkage Program during the same time period
Data Source: Service Linkage Database and follow up data

Process Milestones:
- DY2:
  - P-X1 Development of Outreach and Education Plan
- DY 3:
  - P-4 Metric: Conduct Plan-Do-Study-Act
  - P-5 Milestone: Disseminate findings, lessons learned and best practices

Outcome Improvement Targets for each year:
- DY 4:
  - IT-9.4 Other Outcome Improvement Target(ED appropriate utilization) Reduce rate of ER visits that are non emergent among HIV patients enrolled in Service Linkage program in past 6 months by 3% over baseline
- DY 5:
  - IT-9.4 Other Outcome Improvement Target (ED appropriate utilization) Reduce rate of ER visits that are non emergent among HIV patients enrolled in Service Linkage program in past 6 months by 6% over baseline.

Rationale:
Patient care navigation has been established as a best practice to improve the care of populations at high risk of being disconnected from health care institutions. Tying inpatient and outpatient care can help integrate inpatient and outpatient services and promote accountability for the coordination, cost and quality of care. This service linkage expansion will provide navigation services to targeted patients who are at high risk of disconnect from institutionalized health care (for example, Limited English Proficient patients, recent immigrants, the uninsured, those with low health literacy, frequent visitors to the ED, and others).

Outcome Measure Valuation:
The Outcome measure was valued at 10.71% of the overall assigned project value for the associated Category 2 project in year 3, 10.71% in Year 4 and 10.71% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.
HDDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the
following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The HIV Service Linkage Expansion received a composite Prioritization score of 6.5 and a Public Health Impact score of 6.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $1,220,385.93
Project Option - 2.7.1 Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (TB patients or suspected TB patients)

Unique Project ID: 0937740-08.2.4

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

Last year, a similar project with a smaller scope, utilizing just two testing modalities served 396 TB patients, of which 119 were completely uninsured. 103 of these were African Americans and 191 were White Hispanic. This project intends to serve 750 individuals in DY3, 788 individuals in DY 4 and 825 individuals in DY5 per year to improve TB outcomes.

Intervention(s): The performing provider will implement interventions to rapidly identify, treat and short recovery to reduce TB morbidity for TB patients, contacts of foreign born TB cases and suspected cases enrolled in this project by utilizing three testing and technology (Nucleic Amplification Test, QuantiFERON test and combined INH and RPT tests to meet its goals.

Need for the Project: This project provides a community level, comprehensive evidence based care to patients that have active or latent TB, and their contacts and suspects. The project will rapidly and accurately identify cases and provide a short term therapy that cuts down on number of days of hospital stay.

Target Population: The target population will be at risk vulnerable populations such as the homeless, chronically ill low income population, refugee and new immigrant population, indigent, those without access to care or without a medical home who are routinely reported to the performing provider for active or latent TB.

Category 1 or 2 expected patient benefits: Increase the number or percent of patients in defined population receiving innovative intervention at DY3 baseline total (230 individuals) consistent with evidence-based model by 5% over baseline in DY4 (242 individuals) and by 10% (254 individuals) over baseline in DY5. Estimated patient impact -DY3: NAAT - 50, 3HP - 80, QFT – 100; DY 4: NAAT - 53, 3HP - 84, QFT – 105; DY5: NAAT - 56, 3HP - 88, QFT - 110.
Category 3 outcomes: The two category 3 outcomes are 1) IT-4.10 Other Outcome Improvement Target: Average length of stay for patients diagnosed with TB. Decrease average length of stay by 2% in DY4 and by 5% over baseline in DY5. 2) IT-6.1 Increase in patient satisfaction scores for patients enrolled in program by 5% over baseline in DY4 and by 10% over baseline in DY5.

Title of Outcome Measure (Improvement Target): IT-4.10 Other Outcome Improvement Target: Average length of stay for patients diagnosed with TB.

Unique RHP Outcome identification number(s): 0937740-08.3.7
Performing Provider Name/TPI: City of Houston Department of Health and Human Services /0937740-08

Outcome Measure Description:
Outcome Improvement Target 1 [IT-4.10] Other Outcome Improvement Target: Average length of stay for patients diagnosed with TB.
Numerator: Total number of inpatient days for patients diagnosed with TB
Denominator: Total number of patients diagnosed with TB contacted by TB Program

Process Milestones:

- DY 3:
  - P-3: Develop and test data systems
  - P-7: Initiate patient satisfaction measures to evaluate program and put QI in place.

Outcome Improvement Targets for each year:

- DY 4:
  - IT-4.10 Other Outcome Improvement Target: Reduce Average length of stay for patients diagnosed with TB by 2% over Baseline

- DY 5:
  - IT-4.10 Other Outcome Improvement Target: Average length of stay for patients diagnosed with TB by 5% over Baseline

Rationale:
We chose the outcome improvement target IT-4.10 Other Outcome Improvement Target: Average length of stay for patients diagnosed with TB. The comprehensive testing package to ensure early diagnosis, accurate diagnosis and reduction in number of days of treatment will help us achieve our goals. By providing tests that conduct rapid and accurate identification, short duration of therapy and connecting patients to primary care, where they can receive appropriate care decreases the likelihood of length of stay in the hospital. The performing provider (Houston TB Bureau) will utilize the CDC guidelines to accurately and rapidly identify and rule out TB disease for this project. Based on guidelines from Texas Department of State Health Services Tuberculosis Branch standing delegation orders, the Houston TB Bureau will implement the use of 3HP in the treatment latent tuberculosis patients in order to increase patient compliance and completion of LTBI therapy and decrease the number of patient at risk for progression to active TB disease. Studies have shown about 5 to 10 percent of those with latent TB infection in the
United States will develop TB disease if not treated. People with latent TB infection who have weakened immune systems, including those with HIV/AIDS or diabetes, are more likely to develop TB disease after infection. For those reasons, treatment is important (3). These potential future TB cases could be admitted to hospitals for diagnoses and treatment.

CDC recommends a minimum of two week hospital stay for patients who are infectious with a positive bacteriology smear results. This project plans to reduce the number of hospital days during admissions for treatment of tuberculosis every year and preventing future TB cases. These efforts will provide cost savings to the health care system.

**Outcome Measure Valuation:**
The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2 project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HHDHS utilized the following method to determine the Category 2 project value. HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The TB Rapid Identification, Treatment and Recovery Project received a composite Prioritization score of 7.15 and a Public Health Impact score of 7.

Decrease average length of stay by 2% in DY4 and by 5% over baseline in DY5. 2) IT-6.1 Increase in patient satisfaction scores for patients enrolled in program by 5% over baseline in DY4 and by 10% over baseline in DY5.

Title of Outcome Measure (Improvement Target): IT 6.1 Percent improvement over baseline of patient satisfaction scores- patient’s overall health status/functional status. (Standalone measure)

Unique RHP Outcome identification number(s): 0937740-08.3.8

Outcome Measure Description:
Outcome Improvement Target 1 [IT-6.1] Other Outcome Improvement Target: Patient satisfaction scores for patients diagnosed with TB.
Scoring: Increase in scores from Patient Satisfaction Questionnaire from RAND Health by 5% over baseline in DY4 and 10% over baseline in DY5.

Process Milestones:
• DY2:
  o P-1 Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
• DY 3:
  o P-4 Metric: Conduct Plan-Do-Study-Act
  o P-7:Initiate patient satisfaction measures to evaluate program and put QI in place

Outcome Improvement Targets for each year:
• DY 4: IT-6.1 Other Outcome Improvement Target: Increase in patient satisfaction scores for patients enrolled in program by 5% over baseline in DY4.
• DY 5: IT-6.1 Other Outcome Improvement Target: Increase in patient satisfaction scores for patients enrolled in program by 10% over baseline in DY5.

Rationale:
We chose the outcome improvement target IT-6.1 Other Outcome Improvement Target: Patient satisfaction scores. We will measure an increase in scores from Patient Satisfaction Questionnaire from RAND Health by 5% over baseline in DY4 and 10% over baseline in DY5. Patient satisfaction has been shown to be an important factor in adherence to treatment and this is particularly poorly understood for TB patients. According to CDC, patient satisfaction is how individuals regard the health care services or the manner in which they are delivered by health care providers as useful, effective, or beneficial. It is often based on patient expectations of care and the self-assessment of their experiences. Patient satisfaction may play a major role in a patient’s behaviors. If a patient is dissatisfied with the relationship with their provider or with the clinical setting, he or she is much less likely to be adherent to medications, keeping appointments, identifying contacts, and so forth. Research has shown that patient satisfaction can be increased with effective patient-provider communication and development of a trusting relationship.
CDC recommends a minimum of two week hospital stay for patients who are infectious with a positive bacteriology smear results. This project plans to reduce the number of hospital days during admissions for treatment of tuberculosis every year and preventing future TB cases. These efforts will provide cost savings to the health care system.

**Outcome Measure Valuation:**
The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2 project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HDHHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $723,865.75
**Project Option 2.2.6 - Expand Chronic Care Management Models “Other” project option**

**Unique Project ID: 0937740-08.2.5**

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:**

Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs.

Intervention(s): The Diabetes Awareness and Wellness Network (DAWN) Center is a new initiative serving 400 participants at baseline (75 diagnosed diabetics, 125 with pre-diabetes glucose levels and 200 community members at risk for diabetes) per year from DY 3-5. The Center will provide complementary wellness programming and offer prevention and intervention services and coordination of care for those with diabetes or at risk for diabetes through enhanced education, physical activity, self-management education, hemoglobin A1C tracking and monitoring, BMI measurements, behavioral change coaching, and case management. Participants will be recruited from 3 FQHC’s, County Hospital based diabetes center and one dialysis center that all serve low income Medicaid patients.

Need for the Project: Comprehensive disease management can reduce costs based on less hospitalizations, decrease in loss of productivity, decrease in absenteeism, and decrease in unemployment from disease-related disability. Diabetes patients or those at risk for diabetes receive the greatest benefit from disease management or health enhancing behaviors to lower their risks to develop diabetes.

Target Population: Individuals with diabetes or at risk for diabetes residing in an underserved area (Third Ward) with a high incidence of diabetes will benefit from the comprehensive wellness program.

Category 1 or 2 expected patient benefits: Increase proportion of patients with disease self-management goals in the DAWN Center by 5% over baseline in DY 4 and by 10% over baseline in DY5. The baseline year will serve a target of 200 (diagnosed diabetics and pre-diabetics), in DY4 the Center will serve 210 new diabetics and pre-diabetics and in DY5 the Center will serve 220 new diagnosed diabetics and pre-diabetics that have disease self-management goals. The DAWN Center itself will serve an additional 200 community members/year (in addition to the pre-diabetic and diabetic patients) that are deemed to be at risk for developing diabetes (identified through the American Diabetes Association risk assessment tool).
Category 3 outcomes: IT-1.10 Diabetes care: Decrease proportion of patients with HbA1c poor control by 2% over baseline in Wellness Center enrollees in DY4 and IT-1.10 Diabetes care: Decrease HbA1c poor control by 5% over baseline in DAWN enrollees in DY5.

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes care: *HbA1c poor control (>9.0%)*

Unique RHP Outcome Identification Number: 0937740-08.3.9

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Outcome Measure Description:

IT-1.10 Diabetes care: *HbA1c poor control (>9.0%)*

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Numerator: Percentage of patients 18-75 years of age with diabetes (Type 1 or Type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.

Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (Type 1 and Type 2)

Process Milestones:

- DY 2
  - P-7: Milestone: Conduct Community Education and Outreach
- DY 3
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
  - P-5: Milestone: Disseminate lessons learned and best practices

Outcome Improvement Target(s) for each year:

- DY 4:
  - IT-1.10 Diabetes care: Decrease HbA1c poor control by 2% over baseline in DAWN enrollees (>9.0%)17- NQF 0059 (Stand-alone measure)
    - a Numerator: Percentage of patients 18-75 years of age with diabetes (Type 1 or Type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.
    - b Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (Type 1 and Type 2)
  - c Data Source: DAWN Case Management Registry
- DY 5:
  - IT-1.10 Diabetes care: Decrease HbA1c poor control by 5% over baseline in DAWN enrollees (>9.0%)17- NQF 0059 (Stand-alone measure)
    - a Numerator: Percentage of patients 18-75 years of age with diabetes (Type 1 or Type 2) who had hemoglobin A1c (HbA1c) control > 9.0%.
    - b Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (Type 1 and Type 2)
  - c Data Source: DAWN Case Management Registry
Rationale:

The process and improvement targets have been chosen based on the project goals of chronic care self-management, care transitions, self-management goal setting, and a community based coordinated system of care. Clinically healthy range for HbA1c is less than 5.7 %, values between 5.7% and 6.4% are considered pre-diabetes and values higher than 6.4 are referred to as diabetes. For a diabetic patient, it is recommended to maintain the HbA1C level below 6.5-7 % (1). HbA1C indicates how well one is controlling the blood sugar over the last 60-90 days, which helps the patients and their care providers to adjust the diet, physical activity and medication accordingly. HbA1C is also considered as the’ gateway’ to care for individuals with type-2 diabetes. This project involves establishing a comprehensive Diabetes Wellness Center will offer a community based center in an underserved community with one of the highest incidence of diabetes.

According to the Houston Hospitalizations at a Glance Report, chronic conditions accounted for 78% of all adult preventable hospitalizations in Houston, with 26% of those being related to diabetes. This same report indicates that in Council District D, (most consistent with the targeted service area of the DAWN Center) the annual average cost of adult preventable hospitalizations for District D is $69,644,160 (the highest annual average cost for any District). Additionally, 22% of adult preventable hospitalizations in District D are diabetes-related. City Council District D has the second highest number of preventable diabetes hospitalizations (2,420). It also has the highest average cost per discharge of adult preventable hospitalizations by Council District ($32,038).

Additionally, the literature (Economic Costs of Diabetes in the U.S. in 2007, Diabetes Care31: 596-615, 2008) indicates that a program similar to the Diabetes Awareness and Wellness Network (DAWN) Center that focuses on enhanced education, physical activity, self-management education, hemoglobin A1C tracking and monitoring, BMI measurements, behavioral change coaching, and case management can reduce costs based on less hospitalizations, decrease in loss of productivity decrease in absenteeism, and decrease in unemployment from disease-related disability.

Outcome Measure Valuation:

The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2 project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.
Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category. HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. DAWN received a composite Prioritization score of 7.10 and a Public Health Impact score of 7.

### Year 2 (10/1/2012 – 9/30/2013)

**Process Milestone 1 [P-7]:** Conduct community education and outreach to build awareness about Diabetes risks (mortality, prevalence and control)

**Metric 1:** Documentation of at least ten unique outreach activities/products in target community in DY 2
- Goal: Build awareness of diabetes in target community
- Data Source: Program Documentation, Outreach Materials, Meeting Minutes

**Milestone 1 Estimated Incentive Payment:** $118,220.28

**Year 3 (10/1/2013 – 9/30/2014)**

**Process Milestone 2 [P-4]:** Conduct Plan Do Study Act cycle to continually improve

**Metric 1:** Document use of PDSA in planning process
- Goal: development of report documenting use of PDSA in planning process
- Data Source: Report documentation

**Milestone 2 Estimated Incentive Payment:** $138,304.48

**Process Milestone 3 [P-5]:** Disseminate lessons learned and best practices to stakeholders

**Metric 1:** Documentation of best practices and lessons learned
- Goal: Development of report documenting best practices and lessons learned
- Data Source: Report documentation Process Milestone 3

**Milestone 3 Estimated Incentive Payment:** $138,304.48

**Year 4 (10/1/2014 – 9/30/2015)**

**Outcome Improvement Target 1 [IT-1.10]:** HbA1c poor control (>9.0%) - NQF 0059 (Stand-alone measure)
- Goal: Decrease the proportion of patients who have poor HbA1C control by 2% over baseline
- Data Source: Case Management Registry

**Numerator:** Number of patients 18-75 years of age with diabetes (Type 1 or Type 2) who had hemoglobin A1c (HbA1c) control > 9.0% enrolled in DAWN

**Denominator:** DAWN Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (Type 1 and Type 2)

**Outcome Improvement Target 1 Estimated Amount:** $294,462.64

**Year 5 (10/1/2015 – 9/30/2016)**

**Outcome Improvement Target 3 [IT-1.10]:** HbA1c poor control (>9.0%) - NQF 0059 (Stand-alone measure)
- Goal: Decrease the proportion of patients who have poor HbA1C control by 5% over baseline
- Data Source: Case Management Registry

**Numerator:** Number of patients 18-75 years of age with diabetes (Type 1 or Type 2) who had hemoglobin A1c (HbA1c) control > 9.0% enrolled in DAWN

**Denominator:** DAWN Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (Type 1 and Type 2)

**Outcome Improvement Target 3 Estimated Amount:** $640,288.30

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $1,329,580.18

**Year 2 Estimated Outcome Amount:** $118,220.28

**Year 3 Estimated Outcome Amount:** $276,608.96

**Year 4 Estimated Outcome Amount:** $294,462.64

**Year 5 Estimated Outcome Amount:** $640,288.30

**Regional Healthcare Partnership Plan Region 3**

**1762**
Project Option 2.13.2 - Implement other evidence-based project to provide an intervention for a targeted behavioral health population to prevent unnecessary use of services in an innovative manner.

**Unique Project ID:** 0937740-08.2.6

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** The performing provider will conduct monitoring, screening, assessment, service plan development and linking participants to care (if willing) for a maximum of individuals (N=8000/year) and a minimum of N=6000/year, who frequently display a range of mental and physical symptoms that indicate alcohol or other substance abuse in DY4-5.

**Need for the Project:** The new Sobering Center initiative provides a short term facility where individuals arrested for being under the influence of alcohol or other substances need a facility where they are under medical supervision but not utilizing valuable health care resources at other settings such as hospitals admissions or the ER.

**Target Population:** The target population will be individuals that have been arrested by the Police Department for alcohol or other substance abuse issues and are taken to the Sobering Center. More than 75% are indigent, on Medicaid or homeless.

**Category 1 or 2 expected patient benefits:** 5% decrease over baseline in preventable admissions and readmissions into Criminal Justice System of those who were previously arrested for public intoxication and have participated in Sobering Center program in past 6 months in DY4 and 7% decrease over baseline in DY5. In DY3, it is expected that a baseline will be established of serving 500 contacts/month or 6000 contacts per year will be established when Center is operating fully. In DY4, this will decrease to 475 contacts/month and in DY5 it will decrease further by 7% from baseline to 465 contacts/month.

**Category 3 outcomes:** IT-9.4 Other: Decrease preventable admissions to ER/hospitals/criminal justice setting due to non-emergent alcohol/other substance use intoxication in a 6 month period by 2% over baseline in DY4 and by 4% in DY5.
Title of Outcome Measure (Improvement Target): IT-9.4 Other Outcome Improvement Target; (Non emergent ER visits and hospitalizations in Sobering Center Participants)

Unique RHP Outcome identification number(s): 0937740-08. 3.10

Performing Provider Name/TPI: City of Houston Department of Health and Human Services / 0937740-08

Outcome Measure Description:
IT – 9.4 Other Outcome Improvement Target (Non emergent ER visits and hospitalizations in Sobering Center Participants)
Rate: Preventable admissions to ER and hospitals due to non emergent alcohol/other substance use intoxication symptoms in Sobering Center Participants in previous 6 month period
The performing provider, along with its partner, the Houston Police Department will establish a short-term care facility called the “Sobering Center”, designed as a medically supervised location to transport and house individuals who are under the influence of alcohol or other substances. Many of these individuals would either travel to or are taken to the emergency room for follow up care and the Sobering Center will serve as an alternative to a non emergent ER Visit. Others recycle through the criminal justice system due to non emergent Alcohol or Drug disorder (and frequently, comorbid other mental health conditions). The Sobering Center offers an alternative that saves health care system costs. The individual will remain at the Sobering Center until they are sober enough to safely return to the community. Prior to discharge from the center, every individual will be offered alcohol and/or drug treatment options tailored to their specific needs and followed up to ensure appropriate utilization of care according to protocol.

Data Source: Program Data System

Project Milestones:
- DY2: [P-X1]: Development of Outreach and Education Plan to Target population
- DY 3
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
  - P-5: Milestone: Disseminate lessons learned and best practices

Outcome Improvement Target(s) for each year:
- DY 4:
  - IT-9.4 Other Outcome Improvement Target
    - Reduce rate of all ER visits or hospitalization related to intoxication or substance use that are non emergent by 2% over baseline among program participants during a 6 month period
- DY 5:
  - IT-9.4 Other Outcome Improvement target
    - Reduce rate of all ER visits or hospitalization related to intoxication or substance use that are non emergent by 4% over baseline among program participants during a 6 month period.

Rationale:
We chose our outcome measure from outcome domain “Right Setting Right Care” under Other Outcome Improvement target. We will be measuring preventable admissions to ER/hospitals/criminal justice setting due to non-emergent alcohol/other substance use intoxication as our outcome indicator. Frequent visits to the emergency room is an indicator of alcohol or drug disorders and mental illness, according to a report by DSHS Research and Data Analysis Division in Washington State. This study reports that 55 percent of clients who visited the ER 21 times or more in Fiscal Year (FY) 2002 had diagnoses of both an Alcohol or Drug

Regional Healthcare Partnership Plan Region 3 1764
AOD disorder and mental illness. An additional 7 percent of the most frequent ER visitors had an AOD disorder only and 23 percent had a mental illness only. Only 15 percent of the most frequent ER visitors had no indication of an AOD disorder or mental illness. Few Frequent Emergency Room Visitors With Alcohol Or Drug Disorders Receive AOD Treatment [www.dshs.wa.gov/pdf/ms/rdaresearch/11/119-31.pdf].

The Sobering Center will provide a cost-effective alternative to using ER/hospitals/criminal justice settings for non-emergent AOD disorders (frequently with comorbidity such as mental illness), at no cost to the patient. Other cities adopting such sobering centers have seen reductions in arrests and jail time for these offenders, as well as fewer emergency room and hospital check-ins for this often indigent population, on top of the cost savings found in jail bed diversions. This approach is more effective because it addresses the underlying issue of alcohol and or other substance abuse inherent in most public intoxication offenses. A 2003 study on the Impact of the San Diego Serial Inebriate Program on Use of Emergency Resources concluded that the program reduced the use of EMS, Emergency Department and inpatient resources by individuals who were repeatedly intoxicated in public. By using patient care navigators and assisting patients to get appropriate care and referrals as necessary, there is less of a burden on the health care system.

Outcome Valuation

The Outcome measure was valued at 9.04% of the overall assigned project value for the associated Category 2 project in year 3, 9.04% in Year 4 and 9.04% in Year 5. HHDHS utilized the following method to determine the Category 2 project value. HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration, and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The Care Houston Links Program received a composite Prioritization score of 5.35 and a Public Health Impact score of 6.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $1,030,617.77
Project Option 2.6.4 - Implement other evidence based project to implement health promotion programs in an innovative manner not described above.

Unique Project ID: 0937740-08.2.7

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

Intervention(s): The performing provider will implement interventions to provide an expansion of an evidence-based home visitation program for 100 first time mothers in an underserved area. This consists of 64 home visits over two and one half years for each client enrolled in the program with visits conducted weekly, bi-monthly and monthly.

Need for the Project: This expansion project provides a comprehensive evidence based care to underserved enrolled clients. Underserved clients would not normally have access to comprehensive services provided by such a program to improve birth outcomes for the child and health and social outcomes for the mother. Last year, the NFP served 146 clients with the home visitation program of which 66% were Medicaid clients. Two thirds of the women served by this NFP expansion are expected to be Medicaid recipients.

Target Population: The target population will be women who live in a geographically identified area of the city who have high rates of low birth weights and low prenatal care rates. Recruitment for the program will be conducted from the performing provider’s health clinics and WIC Centers.

Category 1 or 2 expected patient benefits: Increase the number or percent of patients in defined population receiving innovative intervention consistent with evidence-based model by 5% over baseline in DY4 and by 10% over baseline in DY5. During DY3, 100 first time mothers will be served over two and a half years. In DY 4, the number of women served will increase to 105 to account for attrition and in DY 5, 110 mothers will be served, again accounting for attrition over the course of the program.

Category 3 outcomes: IT-8.2 Percentage of low birth weight babies - Reduce percentage of Low Birth- weight births by 2% in DY4 and by 4% in DY5 among women enrolled in the program.
IT-8.1 Timeliness of Prenatal Care - Increase by 5% over baseline number of women that receive recommended prenatal and postnatal care in DY4 and by 10% over baseline in DY5.

**Title of Outcome Measure (Improvement Target):** IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 (*Standalone measure*)

**Unique RHP Outcome identification number(s):** 0937740-08.3.11

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Outcome Measure Description:**

IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 (*Standalone measure*)

- **Numerator:** The number of babies born weighing <2,500 grams at birth enrolled in NFP program
- **Denominator:** All births of women enrolled in NFP program

**Process Milestones:**

- **DY2:**
  - P – 2: Establish Baseline
  - P-3: Develop and test Data systems
  - P – 1: Project Planning

- **DY 3:**
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
    - Metric: Document use of PDSA in planning process
  - P-5: Milestone: Disseminate lessons learned and best practices
    - Metric 1: Documentation of best practices and lessons learned

**Outcome Improvement Targets for each year:**

- **DY 4:**
  - IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 (*Standalone measure*)
    - Reduce Low Birth Weight Births by 2% over baseline

- **DY 5:**
  - IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 (*Standalone measure*)
    - Reduce Low Birth Weight Births by additional 4% over baseline

**Rationale:**

The outcome measure selected for this program was Percentage of Low Birth Weight Births. This outcome was selected because:

- Pre-term birth is defined as babies born alive before 37 weeks of pregnancy is completed. Being born too soon places the life of the baby in a precarious position. According to the World Health Organization, pre-term birth is the leading cause of newborn deaths (death during the first 4 weeks of life) and the second leading cause of death in children under the age of five. Many cost effective strategies have been identified to reduce pre-term birth and produce better birth outcomes such as home visitation programs and other interventions.

- Nurse Family Partnership is one such evidence based home visitation program that has demonstrated better birth outcomes and better outcomes for the new mother by providing care.
before, during and after pregnancy. According to the Nurse Family Partnership website, data from the 1990 Nurse Family Partnership (NFP) Memphis trial noted that the NFP nurse-visited families gained academic and employment skills to become economically self-sufficient. According to this analysis, NFP services resulted in lower enrollment in Medicaid and Food Stamps, with a 9% reduction in Medicaid costs and an 11% reduction in Food Stamps costs in the 10 years following the birth of the child. Federal savings were estimated at 154% of costs, yielding a net 54% return on the federal investment.

**Outcome Measure Valuation:**
The Outcome measure was valued at 11.75% of the overall assigned project value for the associated Category 2 project in year 3, 11.75% in Year 4 and 11.75% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. NFP received a composite Prioritization score of 6.95 and a Public Health Impact score of 7.

**Year 3 Estimated Outcome Amount:** $139,318.81

**Year 4 Estimated Outcome Amount:** $148,311.1

**Year 5 Estimated Outcome Amount:** $322,492.10

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $669,665.68*
Project Option 2.6.4 - Implement other evidence based project to implement health promotion programs in an innovative manner not described above.

Unique Project ID: 0937740-08.2.7

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

Intervention(s): The performing provider will implement interventions to provide an expansion of an evidence-based home visitation program for 100 first time mothers in an underserved area. This consists of 64 home visits over two and one half years for each client enrolled in the program with visits conducted weekly, bi-monthly and monthly.

Need for the Project: This expansion project provides a comprehensive evidence based care to underserved enrolled clients. Underserved clients would not normally have access to comprehensive services provided by such a program to improve birth outcomes for the child and health and social outcomes for the mother. Last year, the NFP served 146 clients with the home visitation program of which 66% were Medicaid clients. Two thirds of the women served by this NFP expansion are expected to be Medicaid recipients.

Target Population: The target population will be women who live in a geographically identified area of the city who have high rates of low birth weights and low prenatal care rates. Recruitment for the program will be conducted from the performing provider’s health clinics and WIC Centers.

Category 1 or 2 expected patient benefits: Increase the number or percent of patients in defined population receiving innovative intervention consistent with evidence-based model by 5% over baseline in DY4 and by 10% over baseline in DY5. During DY3, 100 first time mothers will be served over two and a half years. In DY 4, the number of women served will increase to 105 to account for attrition and in DY 5, 110 mothers will be served, again accounting for attrition over the course of the program.

Category 3 outcomes: IT-8.2 Percentage of low birth weight babies - Reduce percentage of Low Birth- weight births by 2% in DY4 and by 4% in DY5 among women enrolled in the program.
IT-8.1 Timeliness of Prenatal Care - Increase by 5% over baseline number of women that receive recommended prenatal and postnatal care in DY4 and by 10% over baseline in DY5.

**Title of Outcome Measure (Improvement Target):** IT-8.1 Timeliness of Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517)

**Unique RHP Outcome identification number(s):** 0937740-08.3.12

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Outcome Measure Description:**
IT-8.1 Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)

Numerator: Deliveries of live births for which women receive the following facets of prenatal and postpartum care: Received a prenatal care visit as a member of the organization in the first trimester or within 42 days of enrollment in the organization.

Denominator: Deliveries of live births between November 6 of the year prior to the measurement year and November 5 of the measurement year

**Process Milestones:**
- **DY2:**
  - P – 2: Establish Baseline
  - P-3: Develop and test Data systems
  - P – 1: Project Planning
- **DY 3**
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
    - Metric: Document use of PDSA in planning process
  - P-5: Milestone: Disseminate lessons learned and best practices
    - Metric 1: Documentation of best practices and lessons learned

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - IT-8.1 Timeliness of Prenatal/Postnatal Care262 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)
    - Increase the percentage of women receiving timely prenatal and postnatal care by 5% over baseline
  - IT-8.1 Timeliness of Prenatal/Postnatal Care262 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)
    - Increase the percentage of women receiving timely prenatal and postnatal care by 10% over baseline

**Rationale:**
The outcome measures selected for this program was Timeliness of Prenatal Care. This outcome was selected because:

Provision of timely and adequate recommended prenatal care is extremely important to improve birth outcomes in low-income women who may typically not have access to regular
primary and preventive care. Prenatal care given starting the first 3 months of pregnancy can have an impact on the health of the baby as well as the mother. Access to early prenatal care by allowing women and providers to identify and address health problems and behaviors that may cause particular harm during early fetal development, first-trimester prenatal care can lead to improved outcomes, according to the US Department of Health and Human Services. Early prenatal care is likely to matter most for women who are at elevated risk of poor birth outcomes due to smoking, poor nutritional status, HIV-positive status, or other serious health problems prior to pregnancy.

Extensive evaluation of the NFP program indicates that it is predictive of better birth outcomes, including fewer pre-term births. According to the Nurse Family Partnership website, data from the 1990 Nurse Family Partnership (NFP) Memphis trial noted that the NFP nurse-visited families gained academic and employment skills to become economically self-sufficient. According to this analysis, NFP services resulted in lower enrollment in Medicaid and Food Stamps, with a 9% reduction in Medicaid costs and an 11% reduction in Food Stamps costs in the 10 years following the birth of the child. Federal savings were estimated at 154% of costs, yielding a net 54% return on the federal investment.

**Outcome Measure Valuation:**

The Outcome measure was valued at 11.75% of the overall assigned project value for the associated Category 2 project in year 3, 11.75% in Year 4 and 11.75% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration, and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2)
Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. NFP received a composite Prioritization score of 6.95 and a Public Health Impact score of 7.

### Process Milestone 1 [P – 2]: Establish Baseline

**Metric 1:** Current rates for prenatal care in Sunnyside

Baseline: Establish overall baseline metrics for area
Data Source: Vital Statistics data

Process Milestone 1 Estimated Incentive Payment: $19,847.89

### Process Milestone 2 [P-3]: Develop and test Data systems

**Metric 1:** Documentation of discussions of partnership with of established

### Process Milestone 3 [P-4]: Conduct Plan Do Study Act cycle to continually improve

**Metric 1:** Document use of PDSA in planning process
Goal: Use a cyclical PDSA process and implementation improvement strategy
Data Source: Program Documents

Process Milestone 4 Estimated Incentive Payment: $69,659.41

### Process Milestone 5 [P-5]: Disseminate lessons learned and best practices

**Metric 1:** Documentation of best practices and lessons learned.
Goal: Share best practices and lessons learned with community
Data Source: Program Documents

**Outcome Improvement Target 1**

**[IT-8.1]:** Timeliness of Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)

Improvement Target: Increase by 10% over baseline number of women that receive recommended prenatal and postnatal care.

Data Source: Electronic Records

Numerator: Deliveries of live births among women enrolled in the program for which women receive the following facets of prenatal and postpartum care:

Received a prenatal care visit as a member of the organization in the first trimester or within 42 days of enrollment in the organization.

Denominator: Deliveries of live births

**Outcome Improvement Target 2**

**[IT-8.1]:** Timeliness of Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)

Improvement Target: Increase by 5% over baseline number of women that receive recommended prenatal and postnatal care.

Data Source: Electronic Records

Numerator: Deliveries of live births among women enrolled in the program for which women receive the following facets of prenatal and postpartum care:

Received a prenatal care visit as a member of the organization in the first trimester or within 42 days of enrollment in the organization.

Denominator: Deliveries of live births

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYS 2-5): $669,665.68*
City of Houston Department of Health and Human Services

Pass 2
Project Option 2.19.2 - Develop Care Management Function that integrates primary and behavioral health needs of individuals

Unique Project ID: 0937740-08.2.8

Performing Provider Name/TPI: Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas with a population of 2.1 million in 2010. HDHHS has 1,100 employees and a budget of $100,245,403. HDHHS serves the City of Houston through 44 distinct programs. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring and restaurant inspections; birth and death certificates; leadership in emergencies such as hurricanes; operates a comprehensive regional reference laboratory, provides communicable disease prevention and control services and disease surveillance and a variety of health and human services such as the Women, Infants and Children (WIC) nutrition program, senior nutrition services, family planning, oral health services and immunizations via a network of 4 health centers, 14 WIC sites and the Harris County Area Agency on Aging.

Intervention(s): This new Homeless project will serve 200 individuals who are chronically homeless and offer comprehensive service integration intervention. This project will implement its comprehensive five step intervention for the homeless involving 1) permanent housing supportive model 2) program service linkages 3) physical and behavioral health needs 4) financial support 5) other services.

Need for the Project: There is a great need for an integrated system of care for the homeless (defined as four or more bouts of homelessness in the past 3 years or more than a year of current consecutive homelessness) that will effectively house and provide supportive services. This project provides a comprehensive evidence based care to chronically homeless clients who have an ongoing need for housing, physical and behavioral health services. There are at least 2000 chronically homeless individuals in Houston according to the last count performed by the Homeless Coalition. People experiencing chronic homelessness have the following characteristics: 1) typically male (79-86%) and middle age (60% are 35-54), 2) 63% unsheltered, 3) almost 100% with presence of disabilities & frequently multiple disabilities at once and 4) frequently use emergency rooms, hospitals, mental health services, veterans’ services, substance abuse detoxification and treatment, and criminal justice resources. (Chronic Homelessness Policy Solutions, Chronic Homelessness Brief March 2010, National Alliance to End Homelessness).

Target Population: The project targets individuals with histories of mental illness, addiction, complicated medical problems and meet HUD’s definition of chronic homelessness and frequent users of hospitals and crises response systems.

Category 1 or 2 expected patient benefits: Increase patient/target population utilization rates of each aspect of program (Housing, program services, physical and behavioral needs, financial services and other services) by 2% over baseline in DY4 and by 5% over baseline in DY5. During DY3 a baseline of 175 individuals will be placed in permanent housing; in DY4, the
number of people in permanent housing will increase to 184, and in DY5 the number in permanent housing will increase to 193.

**Category 3 outcomes: IT-9.4 Other Outcome Improvement Target - Reduce non emergent ED usage in program participants by 5% over baseline in DY4 and by 10% in DY 5.**

**Title of Outcome Measure (Improvement Target):** IT-9.4 Other Outcome Improvement Target (Right Care, Right Setting)

**Unique RHP Outcome identification number(s):** 0937740-08.3.12

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Outcome Measure Description:**
IT-9.4 Other Outcome Improvement Target (Right Care Right Setting) – Reduce ER use in homeless population enrolled in program
Numerador: Number of non-emergent ED visits for target population served by the program in past 12 months
Denominator: Total number of target population served by the program in past 12 months

**Process Milestones:**
- **DY2:**
  - [P-7] Needs Assessment to determine number and types of needs of the target population
- **DY 3:**
  - P-4 Metric: Conduct Plan-Do-Study-Act
  - P-5 Milestone: Disseminate findings, lessons learned and best practices

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - **IT-9.4 Other Outcome Improvement Target**
  - Metric: Reduce non emergent ED usage in program participants by 5% over baseline
- **DY 5:**
  - **IT-9.4 Other Outcome Improvement Target**
  - Metric: Reduce non emergent ED usage in program participants by 10% over baseline

**Rationale:**
The outcome measure chosen for this project under Outcome Domain “Right Setting Right Care” is “Other Outcome Improvement Target. We anticipate that comprehensive navigation and care management will reduce the number of homeless program participants that end up in ER due to any number of comorbidities. This program plans to provide housing, program services, physical
and behavioral health services, financial services and other services (peer trainers etc.) to homeless individuals enrolled in the program. Provision of this type of an integrated service to this indigent group with special needs along with follow-up will improve physical and behavioral health outcomes as well as address their acute housing needs.

**Outcome Measure Valuation:**
The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2 project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). Consistent with other participants in the regional partnership, HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HHDHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. Integrated services for the homeless received a composite Prioritization score of 10 and a Public Health Impact score of 10.

Project Option 2.7.1 Implement innovative evidence-based strategies to increase appropriate use of technology and testing for targeted populations (e.g., mammography screens, colonoscopies, prenatal alcohol use, etc.)

Unique Project ID: 0937740-08.2.9

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 6 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs.

Intervention(s): The interventions for this new colorectal cancer (CRC) integrated awareness and screening (COCAS) project are to provide CRC FIT screening for 320 new individuals in DY4 and 460 new individuals in DY5, for the two target geographic areas combined; in twelve spatially identified, primarily African American, high risk zip codes. It will involve: 1) Awareness raising small media campaign utilizing culturally appropriate messages, 2) CRC Education about Screening Guidelines and Recommendations, 3) Access to Community wide Non-invasive FIT testing, 4) Test taking training, 5) Testing by nationally accredited laboratory, 6) Sharing of test results, communication and Follow up protocol as appropriate, and 7) Patient Care Navigation for getting individuals situated in a medical home in the targeted zip codes. The total number of individuals reached by COCAS through the integrated project in two target areas will be 800 in Baseline DY3, 840 in DY 4 and 856 in DY5.

Need for the Project: Screening for CRC can test for disease in early stages before symptoms occur. This can prevent morbidity and mortality due to CRC. Significant disparities exist in CRC outcomes with low income, minorities having the poorest outcomes. Screening rates for CRC by a population level, non-invasive method (FOBT) is low in Harris County. This project aims to increase screening rates through a comprehensive program in high risk zip codes.

Target Population: The target population for this project are 50-75 year old men and women (in keeping with the screening guidelines) in twelve high risk zip codes (with previously identified age adjusted spatial clusters of late stage CRC diagnosis) indicating lack of timely screening.

Category 1 or 2 expected patient benefits: Increase number of patients in defined population receiving innovative intervention consistent with evidence-based model by 60% over baseline in DY4 and by 80% over baseline in DY5. The number of new individuals reached by the integrated intervention are 800 in DY3 and 840 in DY4 and 856 in DY5. Of these, 200 will receive FIT screening in DY3 and 320 in DY4 and 460 in DY5.
Category 3 outcomes: IT-6.1 Percent improvement over baseline of patient satisfaction scores (Patients are getting timely care, appointments, and information). – Standalone measure. The integrated COCAS project is expected to increase patient satisfaction scores due to its focus on bridging patient, system and provider related barriers.

**Title of Outcome Measure (Improvement Target):** Colorectal Cancer Screening Patient Satisfaction Scores

**Unique RHP Outcome identification number(s):** 0937740-08.3.13

**Performing Provider/TPI:** City of Houston Department of Health and Human Services/0937740-08.2.8

**Outcome Measure Description:** IT-6.1 Percent improvement over baseline of patient satisfaction scores (Patients are getting timely care, appointments, and information). – **Standalone**

Factors related to patient, providers and the system contribute to poor screening rates. Patient satisfaction scores can potentially increase by including effective patient-level interventions by reducing structural barriers (e.g., direct mailing/pick up of FOBT kits), one-on-one interaction with a healthcare provider or health educator, and patient reminders (e.g., telephone calls, postcards). For some other patient-level interventions, such as group education and organized approaches to screening dramatically increased colorectal cancer screening rates. In addition, some studies have documented the effectiveness of patient navigators (or similar approaches) when used as part of a healthcare system’s intervention. The integrated COCAS project is expected to increase patient satisfaction scores due to its focus on bridging patient, system and provider related barriers. The COCAS intervention consists of all of the above domains and therefore, patient satisfaction scores are expected to be enhanced by the COCAS Program.

Numerator: Percent improvement in targeted patient satisfaction domain

Denominator: Number of patients who were administered the survey

**Process Milestones:**

- **DY 2**
  - P-3: Develop and test data system

- **DY3:**
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices
Outcome improvement targets for each year:

- DY 4:
  - IT-6.1 Percent improvement of 2% over baseline of patient satisfaction scores

- DY 5:
  - IT-6.1 Percent improvement of 5% over baseline of patient satisfaction scores

Rationale:

Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden. An integrated program such as COCAS can bridge some of the patient, provider and system level barriers that are known to be reasons for low screening rates.

Outcome Measure Valuation:

The Outcome measure was valued at 18.63% of the overall assigned project value for the associated Category 2 project in year 3, 18.63% in Year 4 and 18.63% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4) Cost Avoidance 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-
determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. CRC received a composite Prioritization score of 2.29 and a Public Health Impact score of 2.29.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5: $335,259)
City of Houston Department of Health and Human Services
Pass 3
Project Option - 1.8.11 The implementation of dental services for individuals in long-term care facilities, intermediate care facilities, and nursing homes, and for the elderly, and/or those with special needs by enhancing dental workforce capacity through collaborations and partnerships with dental and dental hygiene schools, LHDs, FQHCs, and/or local dental providers

**Unique Project ID:** 0937740-08.1.3

**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 4 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** This new project will improve oral health by providing diagnostic, preventive, restorative, and surgical oral health services for the elderly to improve the health and quality of life for Houston area at-risk seniors. Training the next public health work force is also a goal of the program. 4th year dental students from the University of Texas School of Dentistry (UTSD), dental hygiene students from UTSD, and dental hygiene students from Houston Community College (HCC) will be trained to provide dental care for the seniors within one of the HDHHS safety net dental clinics.

**Need for the Project:** By 2040, the number of US seniors, over the age of 65, is expected to double to 71 million. By 2030, the number of seniors, over the age of 85, is expected to be 9.6 million. As the US seniors live longer, many will be retaining their teeth and many will experience co-morbidities. Older persons who live below the poverty line were almost three (3) times as likely to report unmet dental needs as those who live at or above the poverty line (11 and 4 percent, respectively).

**Target Population:** The primary target population will be at risk low income or indigent seniors seen at public clinics and FQHC’s. More than 80% of the target population is usually low income or indigent in these clinic settings.

**Category 1 or 2 expected patient benefits:** [I-14] Increase by 5% over baseline of special population members that access dental services in DY4 and by 10% over baseline in DY5. In DY3, 60 indigent oral health patients will be served, in DY4, 63 indigent patients will be served and in DY5, 66 oral health patients will be served.
Category 3 outcomes: IT-7.8: Increase by 5% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider in DY4 and by 10% over baseline in DY 5.

**Title of Outcome Measure (Improvement Target):** IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider

**Unique RHP Outcome identification number(s):** 0937740-08.3.15

**Performing Provider/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Outcome Measure Description:**
IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider (*Standalone measure*). Older adults with comorbid conditions have to be treated for poor oral health but care also needs to be coordinated and synchronized with other providers that are treating the patient.

**Process Milestones :**
- DY 2
  - Develop and test data systems
- DY3:
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices

**Outcome improvement targets for each year:**
- DY 4:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Increase by 5% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider
- DY 5
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Increase by 10% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider

**Rationale:**
The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for reduction of dental caries. The PDSA cycle will inform systematic data driven program improvements. Inadequate access to dental services compounds other health issues. Chronic diseases and oral diseases share many common risk factors.

Poor oral health can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic and social consequences. Severe gum disease is associated with chronic disease and severe health conditions such as diabetes, heart disease, stroke and respiratory disease. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality on-going dental care, both at home and professionally.
Increasing, expanding, and enhancing dental services will improve overall health outcomes in the elderly.

**Outcome Measure Valuation:**
The Outcome measure was valued at 15.82% of the overall assigned project value for the associated Category 2 project in year 3, 15.82% in Year 4 and 15.82% in Year 5. HHDHS utilized the following method to determine the Category 2 project value. The HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDDHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. Geriatric Oral Health received a composite Prioritization score of 1.88 and a Public Health Impact score of 1.88.

2.12.3: Implement/Expand Care Transitions Programs, “Other” project option to reduce the incidence of hospital readmissions within 30 days of discharge of Medicare Fee For Service and Dual Eligible individuals that are hospitalized resulting from chronic disease such as Heart Failure (HF).

**Unique Project ID:** 0937740-08.2.10  
**Performing Provider Name/TPI:** City of Houston Department of Health and Human Services/0937740-08

**Project Summary:** Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 4 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.

**Intervention(s):** This expansion project, modeled after an existing Coleman Transitions Intervention, utilizes case managers, coaches and navigators to improve transitions of patients from the inpatient hospital setting to other care settings, improve quality of care, reduce avoidable readmissions for high risk heart failure beneficiaries and document measurable savings to the Medicare program.

**Need for the Project:** Many patients discharged from an inpatient return to the hospital within 30 days. Nearly one in five patients discharged from a hospital—approximately 2.6 million individuals—is readmitted within 30 days, at a cost of over $26 billion every year. Many of these hospital readmissions are considered to be avoidable and indicators of poor care or missed opportunities to better coordinate care.

**Target Population:** The primary target population is at risk patients ages 60 years or older. The majority of clients will be Medicaid or Medicare beneficiaries. This project will expand to additional geographic areas beyond the are covered by the current project. It is expected that 25% of the patients referred for the Care Transitions Program through the Methodist Hospital System will be Medicaid patients. In addition to this, a proportion of patients will be dual-eligible. Medicaid patients with CHF from the large Methodist Hospital System will be channeled to the Care Transitions program for meeting the needs of the program’s target population.

**Category 1 or 2 expected patient benefits:** [I-11]: Improve the percentage of patients in defined population receiving standardized care according to the approved clinical protocols and care transitions policies by 5% over baseline in DY4 and by 10% over baseline in DY5. 30 patients/month will be enrolled in DY3 for baseline, and 40 patients/month in DY4 and 50 patients/month will be enrolled in DY5.
Category 3 outcomes [IT-3.2] Reduce Congestive Heart Failure 30 day readmission rate by 10% over baseline in DY4 and by 25% over baseline in DY5 among individuals that complete the program.

Title of Outcome Measure (Improvement Target): IT-3.2 Congestive Heart Failure 30 day readmission rate (Standalone measure)  
Unique RHP Outcome identification number(s): 0937740-08.3.2  
Performing Provider/TPI: City of Houston Department of Health and Human Services/0937740-08  
Outcome Measure Description: IT-3.2 Congestive Heart Failure 30 day readmission rate (Standalone measure)  
Heart failure is associated with high rehospitalization rates, often due to preventable complications resulting from patients’ inability to adequately self-manage the condition and poorly implemented transitions to the next care setting. Programs that provide adequate guidance at discharge, appropriate medication management, and appropriate followup with patients during times of transition can reduce readmission rates and improve quality of care. Congestive heart failure (CHF) is the leading cause of hospitalization among older patients; furthermore, heart failure is associated with a substantial economic burden, with costs totaling $29.6 billion in 2006. Almost one-third of heart failure patients are readmitted within 30 days of discharge. Causes of heart failure rehospitalization indicate a number of factors that could be addressed during the discharge process. These include, but are not limited to, deficiencies in patient self-care education, inappropriate medication reconciliation, poor communication among health care providers between sites of care, and lack of a plan for appropriate medical followup after discharge. Hospitalized patients are commonly subject to inadequate discharge processes that lead to clinical deterioration and increase the likelihood of rehospitalization.

Process Milestones:  
• DY 2  
  ○ P-7: Milestone: Develop and implement an outreach and marketing strategy  
• DY 3  
  ○ P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program  
  ○ P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:  
• DY 4:  
  ○ IT-3.2 Reduce Congestive Heart Failure 30 day readmission rate by 10% over baseline.  
• DY 5  
  ○ IT-3.2 Reduce Congestive Heart Failure 30 day readmission rate by 25% over baseline.

Rationale: The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for reduction of dental caries. The PDSA cycle will inform systematic data driven program improvements. Inadequate access to dental services compounds other health issues.
Congestive heart failure is one of the most common conditions that is associated with rehospitalizations. Each year over 1 million people are admitted to an inpatient setting for HF, and 27% of patients with HF on Medicare are readmitted within 30 days (Jencks, Williams, & Coleman, 2009). For chronic heart failure patients, case management interventions involving telephone follow-up reduce all-cause readmissions and all-cause mortality a year after discharge. Therefore, our outcome measure relates to reducing readmissions due to congestive heart failure.

Some of the reasons identified for re-admissions are nonadherence (medications, diet, self-monitoring, and communication with provider) is a significant problem in patients with heart failure and frequently contributes to morbidity and increased resource utilization.

**Outcome Measure Valuation:**
The Outcome measure was valued at 84.18% of the overall assigned project value for the associated Category 2 project in year 3, 84.18% in Year 4 and 84.18% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HHDHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HHDHS Valuation Tool). HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HHDHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease, 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HHDHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a predetermined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDDHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. Community Care Transitions received a composite Prioritization score of 10 and a Public Health Impact score of 10.

Columbus Community Hospital

Pass 1
**Title of Outcome Measure (Improvement Target):** IT-3.1 All cause 30 day readmission rate – NQF 1789\(^{250}\) (Standalone measure)

**Unique RHP Outcome Identification Number:** Columbus Community Hospital (CCH)/135033204.3.1

**Outcome Measure Description**
OD-3 Potentially Preventable Re-Admissions – 30 day Re-admission rates IT-3.1 All cause 30 day readmission rate – NQF 1789\(^{250}\) (Standalone measure)

**Process Milestones:**
DY2 – P-1
- DY3 – P-3

**Outcome Improvement Targets:**
- DY4 – IT-3.1
- DY5 – IT-3.1

**Rationale:**
Telehealth is being implemented at Columbus Community Hospital for the purpose of expanding weekend pharmacist oversight to include Saturdays, Sundays and Holidays. Presently there is no pharmacist coverage on those days. The presence of an oversight pharmacist via telehealth capabilities will lead to a reduction in medication errors. This is a direct relationship to readmission rates which has been increasing and on the last Pepper report (March 2012) had risen to 21.4%.

Improvement measure 3.1 will help us tract the readmission rate for all-cause admissions. The population will only include patients 65 are older.

**Outcome Measure Valuation**
The addition of the telehealth service is the primary cost in year two and three. This will require implementation and training of the staff to use the service effectively. In subsequent years the hospital will experience a reduction in the rate of unplanned readmissions thereby initiating cost savings to respective payers such as CMS. The total anticipated values are estimated to be (total of years 2, 3, 4, 5)

El Campo Memorial Hospital
Pass 1
Title of Outcome Measure (Improvement Target): IT-6.1(1) Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification number(s): 131045004.3.1

Outcome Measure Description:
Since this is a new project for El Campo Memorial Hospital, we will use DY 2 & DY 3 to plan the project and establish baseline rates. In DY 4 & DY 5, we will measure IT-6.1 Percent improvement over baseline of patient satisfaction scores specifically related to the measure IT-6.1.1 Patients are getting timely care, appointments, and information. Currently, a patient satisfaction survey does not exist to capture this measure at El Campo Memorial Hospital. Therefore, the baseline will be set at 0. However, we expect to improve this measure by 5% by the end of the waiver.

Rationale:
El Campo Memorial Hospital has selected the process milestones and outcome improvement targets because we are certain if the patient receives timely healthcare and education, they are more likely to continue leading healthy lives and obtaining preventing healthcare on a regular basis which ultimately leads to reduced healthcare costs.

Outcome Measure Valuation:
We considered both the costs and benefits to our organization and community in order to value the Outcome Measure – IT-6.1 Percent improvement over baseline of patient satisfaction scores. We believe it will take DY2 and DY3 to effectively develop and plan the Outcome Improvement Targets in DY4 and DY5. We do not currently perform or contract with a company to perform surveys for outpatient services, but we intend to select a vendor in DY 2. We believe with the improvement in patient satisfaction scores specifically the improvement target of patients getting timely care, appointments and information, this will decrease unnecessary Emergency Room visits, hospital stays, etc. because patients will be receiving the care and attention they need on a consistent and dependable basis. This Outcome Measure will serve the total outpatient service population of El Campo Memorial Hospital, and it will ultimately assist El Campo and the surrounding communities to live healthier lives and be healthier communities.

Fort Bend County Clinical Health Services
Pass 1
Category 3 – Outcome Measure

**Improvement Target:** IT-9.2 ED appropriate utilization

**Unique RHP Outcome Identification Number:** 2967606-01 3.1

**Performing Provider:** Fort Bend County Clinical Health Services / 2967606-01

**Outcome Measure Description:**
OD- 9 – Right Care, Right setting will be defined as the number of persons with behavioral health crisis who had a preventable visit to emergency rooms (ER)

**Process Milestones:**
DY2: P-1  
DY3: P-2, P-3  
DY4: P-4, P-5  
DY5: P-4, P-5

**Outcome Improvement Target(s) for each year:**
DY 4: IT 9.2 Emergency Room visits for target conditions
- Reduce % (TBD) of ER visits for behavioral health/ substance abuse
DY 5: IT 9.2 Emergency Room visits for target conditions
- Reduce % (TBD) of ER visits for behavioral health/ substance abuse

**Rationale:**
Process milestone P-1 was chosen to ensure engagement of multiple stakeholders, delineation of project timeliness and activities. Process milestones P-2 and P-3 are especially critical to the project and include definition of data to be collected, data sources, data tracking mechanisms, and establishment of baselines. The success of the FBC project will be determined by the ability to track outcomes for persons with behavioral health needs who are in “crisis” and access crisis services. Data systems need to be integrated to facilitate communication about the patients’ needs, linking to appropriate services and measuring outcomes. The project will work with various partners in the region as well as the county’s IT department to develop the most efficient data tracking system. The data will be used as part of the project's quality improvement cycle.

Process milestones P-4 and P-5 ensure continuous quality improvement, data driven decision making, identification of “lessons learned” and dissemination to stakeholders. These will allow the use of real time data for continuous quality improvement, engagement of multiple stakeholders, and identification of best practices. The need for information sharing and continuous evaluation cannot be overstated. Within the project, staff will implement the Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. Achieving high quality outcomes depends on continuous assessment of what has been done and flexibility to apply lessons learned to the next phase of a process. The PDSA improvement process will provide for a continuous quality improvement process, which will guide decision making and timelines developed to reach milestones while delivering quality products.

Findings will need to be disseminated, including lessons learned and best practices, so that stakeholders can, in turn, provide additional input and/or validation. To achieve this
feedback loop, the project will conduct meetings of stakeholders, project staff, RHP partners, and other key parties to gather relevant information. These stakeholder meetings will be quarterly.

Stakeholder input is not only critical to the design and implementation of this project but also to its sustainability. Dissemination of our activities to the community and the various stakeholders will be critical. Persons with behavioral health disorders or their families often access 911 crisis services as their first choice for help, and first responders have become the default interveners for behavioral health crisis in FBC. First responders have limited options for these patients and complex situations often arise that require a diligent assessment and delineation of safety and clinical need. The goal is to direct the person to the right level of care and to ensure patient and community safety. There will be many challenges as we implement this project including community education and awareness of a new “response” system.

The Improvement Target will be further defined in DY4 and DY5 based on the data collected in DY2 and DY3. The outcome measure chosen, reduction of ER utilization for behavioral health/substance abuse crises is of great significance and directly related to the Category 1 project. In 2011, FBC Emergency Management Services (EMS) responded to 1, 171 mental health crisis calls, representing almost a 100% percent increase in the past 6 years. Of these 847 patients were transported to a hospital. Analysis of the EMS response calls indicated that the majority of the behavioral health calls are not medical emergencies and unnecessary. The FBC project will create a “Behavioral Health Crisis Response and Intervention” system that will reduce EMS transports and ED visits and admissions.

**Outcome Measure Valuation:**
Outcome valuation follows the same process as for the program metrics. Cost avoidance of State Hospital visits, incarceration, EMS transport, ER visits and in-patient stays for the county indigent program if the established targets are met. The total cost avoidance value anticipated is in excess of $16 million. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $10,016,863.

**Plan for Learning Collaborative:** We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region, 3 Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region’s healthcare system.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYS 2-5)*: $1,177,034
Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care
Unique RHP Outcome Identification Number: 2967606-01 3.2
Performing Provider Name / TPI: Fort Bend County Clinical Health Services /2967606-01

Outcome Measure Description:
DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring health outcomes for the patients and cost avoidance for the program.

DY2 Process Milestones:
• P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
• P-3 Develop and test data systems

DY3 Process Milestones:
• P-2 Establish baseline rates of HbA1c in the targeted population with diabetes.
• P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target
IT-1.10: Reduce the percentage of referred diabetic patients with HbA1c poor control (>9%)

Rationale:
The process milestones were selected to help expand a new program of Care Coordination (patient navigation) within the local FQHC. The project with involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those who inappropriately or repeatedly use high cost medical resources for chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and referred in to the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome change for the target population. Target change for the outcomes were developed from similar program outcomes in other locations. As a measure of the success of the program in handling chronic disease conditions in the population, one measure of positive outcome was selected, that of reduction in poor control of blood glucose levels in diabetics measured by the HbA1c level.

Outcome Measure Valuation:
Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program if the established targets are met, to be replaced by the lower cost Care Coordination at the FQHC. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.1 is $2,997,280. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $2,942,005. $2,611,029 of the total maximum payment is distributed to the category 2 project 2967606-01 2.1. The remaining
$330,976 of the maximum payment is distributed evenly among the 3 outcome measure improvement targets (IT-1.10, IT-9.2, and IT-9.4).

### Starting Point/Baseline:

**Data not available**

### Year 2 (10/1/2012 – 9/30/2013)

**Process Milestone 1 [P-1]:** Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.

Data Source: Documentation of activities and plans

Process Milestone 1 Estimated Incentive Payment (maximum amount): $5,347

**Process Milestone 2 [P-3]:** Develop and test data systems.

Data Source: Documentation of systems and results of tests

Process Milestone 2 Estimated Incentive Payment: $5,347

### Year 3 (10/1/2013 – 9/30/2014)

**Process Milestone 3 [P-2]:** Establish baseline rates – of EMS use by target population encountered and referred.

Data Source: EHR, ePCR

Process Milestone 3 Estimated Incentive Payment: $7,714

**Process Milestone 4 [P-4]:** Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

Data Source: PDSA data and actions

Process Milestone 3 Estimated Incentive Payment: $7,713

**Process Milestone 5 [P-5]:** Disseminate findings, including lessons learned and best practices, to stakeholders.

Data Source: Reports provided

Process Milestone 3 Estimated Incentive Payment: $7,713

### Year 4 (10/1/2014 – 9/30/2015)

**Outcome Improvement Target 1 [IT-9.4]:** Other outcome improvement target / Reduce EMS transport use in target population referred to Care Coordination Program.

Baseline/Goal: DY3 EMS transport use for the target population / Improvement Target: 15% reduction from baseline.

Data Source: ePCR, HER

Outcome Improvement Target 1 Estimated Incentive Payment: $25,693

**Outcome Improvement Target 2 [IT-9.4]:** Other outcome improvement target / Reduce EMS transport use in target population referred to Care Coordination Program.

Baseline/Goal: DY3 EMS transport use for the target population / Improvement Target: 20% reduction from baseline.

Data Source: ePCR, HER

Outcome Improvement Target 2 Estimated Incentive Payment: $55,755

### Year 5 (10/1/2015 – 9/30/2016)

**Outcome Improvement Target 1 [IT-9.4]:** Other outcome improvement target / Reduce EMS transport use in target population referred to Care Coordination Program.

Baseline/Goal: DY3 EMS transport use for the target population / Improvement Target: 15% reduction from baseline.

Data Source: ePCR, HER

Outcome Improvement Target 1 Estimated Incentive Payment: $25,693

**Outcome Improvement Target 2 [IT-9.4]:** Other outcome improvement target / Reduce EMS transport use in target population referred to Care Coordination Program.

Baseline/Goal: DY3 EMS transport use for the target population / Improvement Target: 20% reduction from baseline.

Data Source: ePCR, HER

Outcome Improvement Target 2 Estimated Incentive Payment: $55,755

### Year 2 Estimated Outcome Amount: $10,694

### Year 3 Estimated Outcome Amount: $23,140

### Year 4 Estimated Outcome Amount: $25,693

### Year 5 Estimated Outcome Amount: $55,755

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $115,282
Fort Bend County Clinical Health Services

Pass 2
Category 3 Narrative

Identification of the Category 3 Outcome:

**Title of Outcome Measure** (Improvement Target): OD-9- Right Care, Right Setting

**Unique RHP Outcome Identification Number:** 2967606-01 3.5
**Performing Provider:** Fort Bend County Clinical Health Services / 2967606-01

**Outcome Measure Description:**
IT9.1 – Decrease in mental health admissions and readmissions to criminal justice settings (juvenile detention)

**Process Milestones:**
DY2: P-1
DY3: P-2, P-3
DY4: P-4, P-5
DY5: P-4, P-5

**Outcome Improvement Target(s) for each year:**
DY 4: IT 9.1 Admissions to juvenile detention for youth with complex behavioral health needs
- Reduce % (TBD) admissions to juvenile detention for youth with complex behavioral health needs

DY 5: IT 9.1 Admissions to juvenile detention for youth with complex behavioral health needs
- Reduce % (TBD) of admissions to juvenile detention for youth with complex behavioral health needs

**Rationale:** Process milestone P-1 was chosen to ensure engagement of multiple stakeholders, delineation of project timelines and activities. Process milestones P-2 and P-3 are especially critical to the project and include definition of data to be collected, data sources, data tracking mechanisms, and establishment of baselines. The success of the FBC project will be determined by the ability to track outcomes for persons with youth with behavioral health needs who come into contact with law enforcement and are diverted into appropriate community based clinical services. The project will work with various partners in the region as well as the county’s IT department to develop the most efficient data tracking system. The data will be used as part of the project’s quality improvement cycle.

Process milestones P-4 and P-5 ensure continuous quality improvement, data driven decision making, identification of “lessons learned” and dissemination to stakeholders. These will allow the use of real time data for continuous quality improvement, engagement of multiple stakeholders, and identification of best practices. The need for information sharing and continuous evaluation cannot be overstated. Within the project, staff will implement the Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. Achieving high quality outcomes depends on continuous assessment of what has been done and flexibility to apply lessons learned to the next phase of a process. The PDSA improvement process will
provide for a continuous quality improvement process, which will guide decision making and timelines developed to reach milestones while delivering quality products.

Findings will need to be disseminated, including lessons learned and best practices, so that stakeholders can, in turn, provide additional input and/or validation. To achieve this feedback loop, the project will conduct meetings of stakeholders, project staff, RHP partners, and other key parties to gather relevant information. These stakeholder meetings will be quarterly. Stakeholder input is not only critical to the design and implementation of this project but also to its sustainability. Dissemination of our activities to the community and the various stakeholders will be critical.

The Improvement Target will be defined in DY4 and DY5 based on the data collected in DY2 and DY3. The baseline percentage will be determined in DY3. The outcome measure chosen, reduction in mental health admissions and readmissions to criminal justice settings (juvenile detention) is of great significance and directly related to the Category 2 (Fort Bend County Behavioral Health Juvenile Diversion) project. In 2011, approximately 40 to 45% of the youth “booked” into the Fort Bend County Juvenile Detention had a mental health disorder. This represents an estimated 100% increase in the last 6 years. The length of stay for youth with mental illness (average of 41 days for 2011) is 51% higher than youth without out a mental health disorder (average of 27 days). The average daily cost for treating a youth in detention facility is also significantly higher (approximately $350 per day). Juvenile probation departments and detention facilities have become the default mental health treatments centers for many youth with behavioral health disorders especially those with no insurance or Medicaid. The scarcity of appropriate clinical services for these youth and their families is a significant gap in Fort Bend County. As a result, juvenile probation, much like the adult criminal justice systems, has become the default intervention system. Yet, we know that many of these youth would achieve better outcomes if treated in community based programs with appropriate level of services. The cost effectiveness of community based programs versus incarceration has been well documented throughout the literature. The FBC BHJD project will implement and evaluate evidence based interventions for youth with complex behavioral health needs at risk of involvement in juvenile probation with the goal of improving outcomes for these youth and reducing admission to juvenile detention.

**Outcome Measure Valuation:**
Outcome valuation follows the same process as for the program metrics. Cost avoidance of days in Juvenile Detention if the established targets are met. The total cost avoidance value anticipated is in excess of $750,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $750,000.

**Title of Outcome Measure (Improvement Target):** IT 9.2 – ED Appropriate Utilization / Reduce ED use in target population managed by the Community Paramedic Program

**Unique RHP Outcome Identification Number:** 2967606-01 3.6 / Pass 2

**Performing Provider:** Fort Bend County Clinical Health Services / 297606-01

**Outcome Measure Description:**

DY2 will focus on the Process Milestones necessary to establish and test the system prior to measuring number of successful interventions for the patients and cost avoidance for the program.

**DY2 Process Milestones:**
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
P-3 Develop and test data systems

**DY3 Process Milestones:**
P-2 Establish baseline rates – of projected ED use by target population encountered.

P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

**DY4 and DY5 Outcome Improvement Target**

IT-9.2: ED Appropriate Utilization / Reduce ED use in target population managed by the Community Paramedic Program.

**Rationale:**

The process milestones were selected to establish a Community Paramedic Program in Fort Bend County. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and managed by the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome changes for the target population in terms of use of the ED. Target changes for this outcome were developed from similar program outcomes in other locations.
**Outcome Measure Valuation:**
Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program will be attained if the established targets are met. The total cost avoidance value anticipated for the related category 2 project is $1.4 million. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $750,000.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5)*: $44,363
Title of Outcome Measure (Improvement Target): IT-6.1 Patient Experience with Access to Specialist, Shared Decision Making

Unique RHP Outcome Identification Number: 2967606-01 3.8 / Pass 2
Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:
DY2 and part of DY3 will focus on the Process Milestones and baseline data gathering necessary to establish and test the system prior to measuring patient satisfaction with the increased screenings and access to specialty care.

DY2 Process Milestones:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
P-3 Develop and test data systems

DY3 Process Milestones:
P-2 Establish baseline rates of colonoscopy screening in the targeted population.
P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target:
IT-6.1: Patient Experience with Access to Specialist, Shared Decision Making

Rationale:
The process milestones were selected to help establish a colonoscopy screening program for the prevention and early detection of colorectal cancer. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county. The planning stage and development of a data system will be the focus of DY2.

The outcome measure of patient satisfaction was selected to determine the acceptance and satisfaction of the program in the targeted population. Baseline experience with access to specialists and shared decision making using the CG-CAHPS survey will be undertaken for the target population in DY2. During DY3, the project will be implemented, and at the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved. The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the experience of the target population after program implementation.

Outcome Measure Valuation:
Outcome valuation follows the same process as for the program metrics. Cost avoidance of colorectal cancer treatment costs for the county indigent program if the established targets are
met, to be replaced by the lower cost colonoscopy screening and cancer prevention procedures. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.2 is $660,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $539,044.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $31,884
Title of Outcome Measure (Improvement Target): IT 12.3 – Colorectal Cancer Screening

Unique RHP Outcome Identification Number: 2967606-01 3.9 / Pass 2

Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:

DY2 and part of DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring increased screening and results for the patients and cost avoidance for the program.

DY2 Process Milestones:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
P-3 Develop and test data systems
P-2 Establish Baseline Rates of Colonoscopy Screening in the target population

DY3 Process Milestones:
P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY3 Outcome Improvement Target:
IT 12.3 – Colorectal Cancer Screening

DY4 and DY5 Outcome Improvement Target:
IT 12.3 – Colorectal Cancer Screening

Rationale:

The process milestones were selected to help expand a new program of colorectal cancer screening in the uninsured and underinsured population of Fort Bend County. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county. The planning stage and development of a data system will be the focus of DY2, and rates of colonoscopy screening in the population will be measured. The program will be implemented in DY3. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome change for the target population. The outcome measure is the proportion of the target population screened for colorectal cancer using a colonoscopy.
**Outcome Measure Valuation:**
Outcome valuation follows the same process as for the program metrics. Cost avoidance of colorectal cancer treatment costs for the county indigent program if the established targets are met, to be replaced by the lower cost colonoscopy screening and cancer prevention procedures. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.2 is $600,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of 539,044.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $44,363
Fort Bend County Clinical Health Services
Pass 3
**Title of Outcome Measure (Improvement Target):** OD-1 – Primary Care and Chronic Disease Management / IT 1.1 – Third Next Available Appointment

**Unique RHP Outcome Identification Number:** 2967606-01 3.10

**Performing Provider Name/TPI:** Fort Bend County Clinical Health Services/ 2967606-01

**Outcome Measure Description:**
DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring access outcomes for the patients and cost avoidance for the program.

**DY2 Process Milestones:**
- P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- P-3 Develop and test data systems

**DY3 Process Milestones:**
- P-2 Establish baseline rates – of third next available appointment for the target population.
- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

**DY4 and DY5 Outcome Improvement Target**
- IT-1.1: Third Next Available Appointment

**Rationale:**
The process milestones were selected to help expand the hours of operation within the local FQHC. The project will involve staffing a new care team of medical providers and support staff to allow for standard 7am to 7pm hours on weekdays and to include Saturday hours. Promotion of the hours and referral for use will take coordination with several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those patients who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. It is expected that in the first year of implementation the new patient care team will see 65% of the current patient load of a full time provider panel (care team), therefore seeing 975 patients in DY3. In DY4 and DY5, it is anticipated that the new care team will see 1,500 patients each year. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and referred to the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the expanded hours as initiated in DY3 and to measure the change for the target population in terms of third next available appointment.

**Outcome Measure Valuation:**
Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program if the established targets are met, to be replaced by the lower cost Care Coordination at the FQHC. The total cost avoidance value anticipated for the related category 1 project 2967606-01 1.2 is $2,195,200.
This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $2,100,000. $1,855,899 of the total maximum payment is distributed to the category 1 project 2967606-01 1.2. The remaining $249,101 of the maximum payment is distributed evenly among the 3 outcome measure improvement targets (IT-1.1, and IT-9.2).
| Process Milestone 1 [P-1]: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans | Process Milestone 3 [P-2]: Establish baseline rates – of third next available appointment. Data Source: EHR, ePCR | Outcome Improvement Target 1 [IT-1.1]: Third next available appointment( Reduce average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam) Baseline/Goal: DY 3 third next available appointment for target population / Improvement Target:10% reduction from baseline (DY3) Data Source: ePCR, EHR | Outcome Improvement Target 1 [IT-1.1]: Third next available appointment( Reduce average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam) Baseline/Goal: DY 3 third next available appointment for target population / Improvement Target:20% reduction from baseline (DY3) Data Source: ePCR, EHR |

Title of Outcome Measure (Improvement Target): OD-9 Right Care, Right Setting - IT 9.2 – ED Appropriate Utilization / Reduce ED use in target population referred to Care Coordination Program

Unique RHP Outcome Identification Number: 2967606-01 3.11
Perfoming Provider Name/TP: Fort Bend County Clinical Health Services/2967606-01

Outcome Measure Description:
DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring health outcomes for the patients and cost avoidance for the program.

DY2 Process Milestones:
- P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- P-3 Develop and test data systems

DY3 Process Milestones:
- P-2 Establish baseline rates – of ED use by target population encountered and referred.
- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target
- IT-9.2: ED Appropriate Utilization / Reduce ED use in target population referred to Care Coordination Program

Rationale:
The process milestones were selected to help expand the hours of operation within the local FQHC. The project will involve staffing a new care team of medical providers and support staff to allow for standard 7am to 7pm hours on weekdays and to include Saturday hours. Promotion of the hours and referral for use will take coordination with several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those patients who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. It is expected that in the first year of implementation the new patient care team will see 65% of the current patient load of a full time provider panel (care team), therefore seeing 975 patients in DY3. In DY4 and DY5, it is anticipated that the new care team will see 1,500 patients each year. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and referred to the program, baseline data, which is not currently available on the population, will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the expanded hours as initiated in DY3 and to measure the change for the target population in terms of use of the ED. Target changes for this outcome were developed from similar program outcomes in other locations.

Outcome Measure Valuation:
Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program if the established targets
are met, to be replaced by the lower cost Care Coordination at the FQHC. The total cost avoidance value anticipated for the related category 1 project 2967606-01 1.2 is $2,195,200. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $2,100,000. $1,855,899 of the total maximum payment is distributed to the category 1 project 2967606-01 1.2. The remaining $249,101 of the maximum payment is distributed evenly among the 3 outcome measure improvement targets (IT-1.1, and IT-9.2).

Gulf Bend
Pass 2
Title of Outcome Measure (Improvement Target):
OD-2 Potentially Preventable Admissions, IT-2.4 Behavioral Health/Substance Abuse Admission Rate

Unique RHP outcome identification number: 1352544-07.3.1/Pass 2
Performing provider/TPI: Gulf Bend Center/135254407

Outcome Measure Description:
The related Category 3 outcome improvement measure chosen for the Gulf Bend Person-Centered Behavioral Health Medical Home project is OD-2 Potentially Preventable Admissions, specifically IT-2.4 Behavioral Health/Substance Abuse Admission Rate including the following:
   1. One for BH/SA as the principal diagnosis
   2. A second category in which a significant BH/SA secondary diagnosis is present (e.g. reduction in admission rate with a primary diagnosis of asthma/diabetes/COPD with a secondary diagnosis of mood/affective disorders.

Through this project Gulf Bend expects to decrease admissions due to asthma, depression, and diabetes with an underlying or co-existing mental health disorder by 25% by the end of DY 5.

Outcome Improvement Targets for each year:

Rationale:
Process milestones P-1 through P-3 were chosen so we can establish a detailed project plan including identifying current capacity and needed resources and baseline information in which to effectively manage and monitor the project. Gulf Bend expects to see a decrease in the admission rates as described above by developing and implementing the Person-Centered Behavioral Health Medical Home. Targeting at risk populations with co-morbid diseases of mental illness and chronic disease who currently go untreated or under treated and who routinely access more intensive and costly services such as emergency departments, inpatient hospitals or jails and through this outcome measure we expect to see the success of a reduction in hospital admissions with a primary diagnosis of chronic disease and a secondary diagnosis of behavioral health.

Outcome Measure Valuation:
Due to the high number of admissions to the local hospitals due to co-occurring mood/affective disorders and chronic co-morbid disease, Gulf Bend feels that an initial decrease for all three admissions by 25% by the end of DY 5 is a great starting point. This could lead to an overall savings of $3,249,179 in just one year. These numbers may seem low, but this is because the integration of primary care and behavioral health services is new to the area. It will take time for patients to take full advantage of the integrated services offered by Gulf Bend.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $450,000
Gulf Coast Medical Center
Pass 1
**Title of Outcome Measure (Improvement Target):** IT-1.18 Follow up after Hospitalization for Mental Illness-NFQ 0576

**Performing Provider Name/TPI:** Gulf Coast Medical Center/178815001

**Unique RHP Outcome Identification Number:** 178815001.3.1

**Outcome Measure Description:**

IT-1.18

- Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.
- Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

**Process Milestones:**

- DY 2: P-1; P-2; P-3
- DY 3: P-5

**Outcome Improvement Target(s) for each Year:**

- DY 4
  - IT-1.18 Increase in percentage of patients with follow up care after hospitalization for Mental Illness
    - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.
    - Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

- DY 5
  - IT-1.18 Increase in percentage of patients with follow up care after hospitalization for Mental Illness
    - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.
    - Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

**Rationale:**

Process Milestone P-1, P-2 and P-3 were chosen to establish a foundation for the establishment of an inpatient adult psychiatric unit and consideration for an outpatient center for follow up care. The focus was to ensure that an initial timely response to a potential need for psychiatric care was addressed. Delay in treatment in the care of an individual with mental illness may result in adverse outcomes. During DY 2 a baseline will be established and DY 3, 4, and 5 has a percentage increase annually to complete admission process from time of referral to arrival on unit.
Improvement targets were placed in DY 3, DY 4 and DY 5 based upon the timeframe allowed to put in place the proper education/training and process implementation. Although all the overall goal is to ensure that individuals within the county, and surrounding counties and the military have expedited access to mental health care and receive quality inpatient care for the treatment of mental disorders it is of utmost importance that when patients move to the next continuum (discharge) treatment continues on an outpatient basis to ensure compliance with the treatment plan thus preventing readmissions. Patients in the project will need to be followed over time. Based upon the need to ensure compliance on an outpatient basis regarding the treatment plan established for the patient while hospitalized, follow up after hospitalization for mental illness is a targeted improvement outcome.

**Outcome Measure Valuation:**
Areas considered when allocating funds for this project included the importance of ensuring individuals within Wharton County and the surrounding rural areas, with a large underserved/underinsured population, access to the care needed with regard to mental disorders. Upon discharge from an inpatient psychiatric facility follow up care by a mental health practitioner is of utmost importance to ensure that the patient remains compliant with his/her treatment plan to ensure a positive outcome with their care and reduce preventable readmissions. An enhanced continuing care plan with linkages to the next level of care post-discharge will result in overall reductions in healthcare costs.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $823,217*
Title of Outcome Measure (Improvement Target):  IT-1.20 Timeliness of Inpatient Admission for Mental Illness

Performing Provider Name/TPI:  Gulf Coast Medical Center/178815001

Unique RHP Outcome Identification Number:  178815001.3.2

Outcome Measure Description:

IT-1.20

- Timely admission to Inpatient Psychiatric Unit—based upon systems and processes instituted at the time of the establishment of the adult inpatient psychiatric timely respond to referrals for inpatient treatment will be measured and targets set to improve response rates.

Process Milestones:

- DY 2: P-1; P-2, P-3
- DY 3: P-3

Outcome Improvement Target(s) for each Year:

- DY 4
  - Improve rate for DY 4 as compared to baseline rate established in DY 2. Increase admission rate by 5%.
- DY 5
  - Improve rate for DY 5 as compared to baseline rate established in DY 2. Increase patient rate to by 8%.

Rationale:

Process Milestone P-1, P-2 and P-3 were chosen to establish a foundation for the establishment of an inpatient adult psychiatric unit and consideration for an outpatient center for follow up care. The focus was to ensure that an initial timely response to a potential need for psychiatric care was addressed. Delay in treatment in the care of an individual with mental illness may result in adverse outcomes. During DY 2 a baseline will be established and DY 3, 4, and 5 has a percentage increase annually to complete admission process from time of referral to arrival on unit.

Improvement targets were placed in DY 3, DY 4 and DY 5 based upon the timeframe allowed to put in place the proper education/training and process implementation. Although all the overall goal is to ensure that individuals within the county, surrounding counties and the military have expedited access to mental health care and receive quality inpatient care for the treatment of mental disorders it is of utmost importance that when patients move to the next continuum (discharge) treatment continues on an outpatient basis to ensure compliance with the treatment plan thus preventing readmissions. Patients in the project will need to be followed over time. Based upon the need to ensure compliance on an outpatient basis regarding the treatment plan established for the patient while hospitalized, follow up after hospitalization for mental illness is a targeted improvement outcome.
**Outcome Measure Valuation:**

Areas considered when allocating funds for this project included the importance of ensuring individuals within Wharton County and the surrounding rural areas with a large underserved/underinsured population, access to the care needed with regard to mental disorders. A 28 bed inpatient adult psychiatric unit would allow individual’s timely access to care for mental disorders whereas currently delays as long as up to 60 hours before receiving in care is experienced frequently as bed availability is limited and waiting lists for beds are being utilized. With Gulf Coast Medical Center expanding the presence of psychiatric care to improve access to care for the vastly underserved area; growth and patient impact could be substantial. With robust ongoing enhancement the adult psychiatric services could expand from a baseline of virtually zero local behavioral health impatient services for adults to potentially directly impacting 760 persons with mental disorders per year though the life of this demonstration project. The elements of access to care and patient satisfaction (as measured by patient satisfaction surveys), as well as clinical outcomes (as measured by admission and discharge DLS-20 scores) are bound to improve significantly once the adult psychiatric unit is operational. The time between referral to admission onto a psychiatric service unit could be reduced dramatically with immediate access; from the current possible 60 hours to less than 24 hours.

Harris County Hospital District Ben Taub General Hospital
Pass 1
Title of Outcome Measure (Improvement Target): IT 6.2- Other: Percent improvement over baseline of Patient Satisfaction scores

Unique RHP outcome identification number(s): 133355104.3.1
Performing Provider Name/TPI: Harris Health System / 133355104

Outcome Measure Description:
IT 6.2 will measure improvement in the overall mean score for patient satisfaction over time using the standard same day access clinic survey supplied by Press Ganey and approved by HHSC.

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the Gulfgate Health Center, there were 792 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. As a result, patient satisfaction scores reported by Press Ganey can be greatly improved. From November 2011-October 2012 at Gulfgate Health Center, the mean score for “Ease of scheduling appointments” was 68.0.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Gulfgate same day access clinic will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

Process Milestones:
- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:
- DY4:
  - IT 6.2- 0.5% improvement over baseline of patient satisfaction for overall mean survey score
- DY5:
  - IT 6.2- 1% improvement over baseline of patient satisfaction for overall mean survey score

Rationale:
P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline score at the new clinic based on available performance. In DY3, we will also conduct
PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT- 6.2 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic. Based on Harris Health System’s historic Press Ganey patient satisfaction scores and the volume of patients served, we believe the percent improvement goals suggested are both challenging and meaningful.

**Outcome Measure Valuation:**

This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic’s capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Currently, some patients do not rate Harris Health positively due to the fact that waitlists to see providers are at times sixty plus days because of the high demand and limited providers. Because of the current back-log of patients, Harris Health System assures that by building a Casa de Amigos Same Day Access clinic, we will meet the basic needs of thousands of more patients in a timely manner, giving Harris Health the ability to survey potentially 31,000 additional patients between DY3 and DY5, increasing the patient satisfaction score. From 2011 to 2012, Harris Health System’s existing Ambulatory Care Health Centers patient satisfaction score improved 2% across all centers combined, leading us to believe that the goals we have established will be both challenging and meaningful upon establishing a baseline. For this project, Harris Health will implement a new survey tool for a different environment in which care will be provided; therefore, we wanted to keep the goals achievable as this will be a new endeavor for our system in terms of same day clinics and patient satisfaction.

Title of Outcome Measure (Improvement Target): IT- 6.2: Percent improvement over baseline of patient satisfaction

Unique RHP outcome identification number(s): 133355104.3.3
Performing Provider Name/TPI: Harris Health System /133355104

Outcome Measure Description:
IT- 6.2: will measure percent improvement over baseline of patient satisfaction scores for the Access dimension mean score on the Press Ganey Medical Practice Survey currently used at Harris Health System. The expansion of primary care capacity in the existing Health Centers will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient experience in obtaining services. Patient satisfaction scores for timely access to care for the Health Centers have historically been below expectations. The expansion of primary care capacity in the existing Health Centers will offer additional access, affording patients the opportunity to seek care in the right setting. The current score for Ease of scheduling appointment for the Health Centers is 71.3%. The additional providers will add capacity for appointments, which will increase appointment availability for both new and return patients. The enhanced access to care will result in improved patient satisfaction scores as related Access.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:
- DY4:
  - IT- 6.2: Percent improvement over baseline of patient satisfaction score
    - Increase Access survey dimension score by 0.5% above baseline
- DY5:
  - IT- 6.2: Percent improvement over baseline of patient satisfaction score
    - Increase Access survey dimension score by 1% above baseline

Rationale:
P-1 was chosen to ensure that all necessary stakeholders are involved and addressed to develop the strategies necessary to improve Access to Care patient satisfaction scores. Improvement targets were chosen based on the time and resources needed to hire and train physicians and support staff. The improved patient access may begin in DY3, patient satisfaction score improvements will be measured in DY4 and DY5. Improvement target 1 aims to increase patient satisfaction by 0.5% above baseline, while improvement target 2 aims to increase patient satisfaction by 1% above baseline.

Outcome Measure Valuation:
This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Harris County. The value of the project is based on the expansion of services in Harris Health System’s NCQA certified medical home clinics, substantially increasing our capacity to provide primary care services, including laboratory testing, imaging, and other ancillary services, along with prescription medications and timely referrals for specialty care and other needed services within the Harris Health System network.
The increase in provider staffing throughout the existing medical home network can ultimately care for the primary care needs of an additional twenty-three thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Regional Healthcare Partnership Plan

Region 3

1874
Title of Outcome Measure (Improvement Target): IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)

Unique RHP outcome identification number(s): 133355104.3.4
Performing Provider Name/TPI: Harris Health System / 133355104

Outcome Measure Description:
IT1.10 will measure improvement in the percentage of patients 18-75 years of age with poorly controlled diabetes. Poorly controlled will be defined as patients with diabetes (type 1 or 2) who had hemoglobin A1c (HbA1c) control >9.0%.

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Process Milestones:
- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:
- DY4:
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients in Medical Home with poorly controlled diabetes by 0.5% below baseline
- DY5
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients in Medical Home with poorly controlled diabetes by 1.0% below baseline

Rationale:
P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline HbA1c poor control (>9.0%) at the new West and Northwest 1 area health centers based on available data. In DY3, we will also conduct PDCA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT-1.10 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the West and Northwest 1 area health centers for patient care and successful data calculation. Improvement targets were chosen with the expectation to decrease the percentage of patients with poorly controlled diabetes gradually to coincide with improvements in operations at the clinic.

Outcome Measure Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic’s capacity to provide a medical home for primary care...
services, including laboratory point-of-care testing, some imaging, other ancillary services and prescription medications along with timely referrals for specialty care and other needed services within the Harris Health System network. The clinic can ultimately care for the comprehensive primary care needs of over five thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. There are many ways to decrease HbA1c. Patient intervention may include medication management, behavioral modification, and individual and group education.

In addition, the availability of timely primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

**Unique RHP outcome identification number(s):** 133355104.3.5

**Performing Provider Name/TPI:** Harris Health System / 133355104

**Outcome Measure Description:**

As Performing Provider, Harris Health System chose IT1.10 to measure improvement in the percentage of patients 18-75 years of age with poorly controlled diabetes. Poorly controlled will be defined as patients with diabetes (type 1 or 2) who had hemoglobin A1c (HbA1c) control >9.0%.

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

**Process Milestones:**

- DY2: P-1; P-5
- DY3: P-2; P-4

**Outcome Improvement Target(s) for each year:**

- DY4:
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients in Medical Home with poorly controlled diabetes by 0.5% below baseline

- DY5:
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients in Medical Home with poorly controlled diabetes by 1.0% below baseline

**Rationale:**

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline HbA1c poor control (>9.0%) at the new Northwest 2 area health center based on available data. In DY3, we will also conduct PDCA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT-1.10 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the Northwest 2 area health centers for patient care and successful data calculation. Improvement targets were chosen with the expectation to decrease the percentage of patients with poorly controlled diabetes gradually to coincide with improvements in operations at the clinic.

**Outcome Measure Valuation:** This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic’s capacity to provide a medical home for primary care.
services, including laboratory point-of-care testing, some imaging, other ancillary services and prescription medications along with timely referrals for specialty care and other needed services within the Harris Health System network. Each clinic can ultimately care for the comprehensive primary care needs of over three thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. There are many ways to decrease HbA1c. Patient intervention may include medication management, behavioral modification, and individual and group education.

In addition, the availability of timely primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.
### Percent improvement over baseline of diabetes care: HbA1c poor control (>9.0%)

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $8,338,067
**Title of Outcome Measure (Improvement Target):** IT 6.2- Other: Percent improvement over baseline of Patient Satisfaction scores

**Unique RHP outcome identification number(s):** 133355104.3.6

**Performing Provider Name/TPI:** Harris Health System / 133355104

**Outcome Measure Description:**

IT 6.2 will measure improvement in the overall mean score for patient satisfaction over time using the standard same day access clinic survey supplied by Press Ganey and approved by HHSC.

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Southwest, Medical Center, and Northeast same day access clinics will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

**Process Milestones:**
- DY2: P-1; P-5
- DY3: P-2; P-4

**Outcome Improvement Target(s) for each year:**

- **DY4:**
  - IT 6.2- 0.5% improvement over baseline of patient satisfaction for overall mean survey score

- **DY5:**
  - IT 6.2- 1% improvement over baseline of patient satisfaction for overall mean survey score

**Rationale:**

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline at the new same day access clinic based on available performance. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.
IT-6.2 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic. Based on Harris Health System’s historic Press Ganey patient satisfaction scores and the volume of patients served, we believe the percent improvement goals suggested are both challenging and meaningful.

**Outcome Measure Valuation:**

This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinics’ capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. Each of the three clinics can ultimately care for the episodic primary care needs of over six thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Currently, some patients do not rate Harris Health positively due to the fact that waitlists to see providers are at times sixty plus days because of the high demand and limited providers. Because of the current back-log of patients, Harris Health System assures that by building more same day access clinics, we will meet the basic needs of thousands of more patients in a timely manner, giving Harris Health the ability to survey potentially 31,000 additional patients between DY3 and DY5, increasing the patient satisfaction score. From 2011 to 2012, Harris Health System’s existing Ambulatory Care Health Centers patient satisfaction score improved 2% across all health centers, leading us to believe that the goals we have established will be both challenging and meaningful upon establishing a baseline. For this project, Harris Health will implement a new survey tool for a different environment in which care will be provided; therefore, we wanted to keep the goals achievable as this will be a new endeavor for our system in terms of same day clinics and patient satisfaction.

Title of Outcome Measure (Improvement Target): IT-1.1 Third next available appointment

Performing Provider/TPI: Harris Health System/133355104
Unique RHP outcome identification number(s): 133355104.3.7
Outcome Measure Description:

OD-1 Primary Care and Chronic Disease Management
IT-1.1 Third next available appointment

Process Milestones:

- DY2:
  - P-2 Establish Baseline
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

Outcome Improvement Targets for each year:

- DY3: decrease wait time from specialty referral to specialty clinic visit 5% from baseline
- DY4: decrease wait time from specialty referral to specialty clinic visit 10% from baseline
- DY5: decrease wait time from specialty referral to specialty clinic visit 15% from baseline

Rationale:

This particular improvement target, IT-1.1 (Third next available appointment) was chosen because a goal of this project is to produce more efficiencies in primary care visits that lead to appropriate specialty clinic referrals. With this goal in mind, a primary goal of the project is to decrease the backlog for diabetes and rheumatology clinics, which will ultimately decrease the wait time for next available appointment. Process milestone P-1 was chosen for DY2 because of the nature of this project. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders. During this year, a baseline will also be established (P-2) to measure improvement in later years. Based on the outcome of baseline, we plan to decrease the wait time 5% in DY3, 10% in DY4, and 15% in DY5.

Outcome Measure Valuation:

This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics, (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients’ satisfaction. In addition, these improvements will facilitate providing quality care for expected significant influx of patients due to implementation of Accountable Care Act (ACA) and the 1115 Waiver without a major increase in the number of providers and capital investment.

IT-1.14 Diabetes care: Microalbumin/Nephropathy- NQF 0062 (non-standalone)

**Process Milestones:**
- DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans  
- DY3: P-2 Establish Baseline

**Outcome Improvement Targets for each year:**
- DY4: TBD based on established baseline in DY3  
- DY5: TBD based on established baseline in DY4

**Rationale:**
This particular improvement target, IT-1.14 (Diabetes care: Microalbumin/Nephropathy- NQF 0062) was chosen because a goal of this project is to produce more efficiencies in primary care visits that lead to appropriate specialty clinic referrals. There will be a focused algorithm on the diabetic population through this project. This is a large need in Harris County and the region. In creation of this algorithm, we plan to improve the percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had a nephropathy screening test or evidence of nephropathy. This is an important measure in improving the population health of our diabetic population served. The improvement targets for this outcome measure will be determined based on the baseline that will be established in DY2. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders.

**Outcome Measure Valuation:**
This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics, (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients’ satisfaction. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $2,061,259*
**Title of Outcome Measure (Improvement Target):** IT-1.10 Diabetes care: HbA1c poor control (>9.0%)233- NQF 0059 (Standalone measure)

**Performing Provider/TPI:** Harris Health System/133355104  
**Unique RHP outcome identification number(s):** 133355104.3.9

**Outcome Measure Description:**

OD-1 Primary Care and Chronic Disease Management  
IT-1.10 Diabetes care: HbA1c poor control (>9.0%)233- NQF 0059 (Standalone measure)

a. Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%

b. Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2)

**Process Milestones:**

- DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3: P-2 Establish Baseline

**Outcome Improvement Targets for each year:**

- DY4: 2% decrease from baseline
- DY5: 3% decrease from baseline

**Rationale:**

This particular improvement target IT-1.10 (Decrease in the percentage of patients with HbA1c > 9% from baseline) was selected as it could serve as an integral measure of diabetes patients care and of the success of efforts in DEEP and CEEP programs implementation as it is proposed in this project. This will reflect the concerted efforts of PCPs, endocrinologists and clinical pathologists executing the evidence-based best practice algorithmic approaches. Process milestone P-1 was chosen for DY2 because of the nature of this project. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders. During DY3, a baseline will be established (P-2) to measure improvement in later years. Based on the outcome of baseline, we plan to decrease the percentage of patients with HbA1c >9% by 2% in DY4 and by 3% in DY5. We plan these relatively modest percentages of improvement considering the high total volumes of diabetic patients within the Harris Health system and currently limited resources and workforce to address the problem.

**Outcome Measure Valuation:**

This project will focus on diabetes mellitus (DM) and pre-diabetes patients. Diabetes is one of the most costly and highly prevalent chronic diseases in the United States, for this matter in Texas and Harris County. Approximately 20.8 million Americans have diabetes and about half of these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and...
addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars. That is why introduction of the DEEP and CEEP programs proposed in the current project is of paramount importance and selection of appropriate measure of the achieved results is critical. Additionally, the possibility for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for DM patients is an extra value of the project. It is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics. (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients’ satisfaction. These improvements will also facilitate providing quality care for expected significant influx of patients due to implementation of ACA and the 1115 Waiver without a major increase in the number of providers and capital investment.

*Region 3*
Title of Outcome Measure (Improvement Target): IT- 6.2 Percent improvement over baseline of patient satisfaction

Unique RHP Outcome ID: 133355104.3.10
Performing Provider Name/TPI: Harris Health System / 133355104

Outcome Measure Description:
IT-6.2 will measure improvement in overall satisfaction scores over time at FQHCs of the Access dimension, using Press Ganey’s Medical Practice Survey.

The baseline will be established using patient satisfaction survey data from each FQHC, with each FQHC’s score to be tracked and trended separately. The baseline patient satisfaction score at the FQHC’s will be established in DY3. At Harris Health System, timeliness of care scores is negatively affected by access and capacity. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. As a result, the mean patient satisfaction score for Moving Through Your Visit for the last 12 months (9/2011-9/2012) was 70.2 for all primary care health centers at Harris Health System, as reported through the survey administered by Press Ganey. Expanded capacity and optimized referrals to FQHCs can improve patient satisfaction regarding timely care.

Process Milestones:
• DY2: P-1; P-5
• DY3: P-2; P-4

Outcome Improvement Target(s) for each year:
• DY4:
  • [IT-6.2]: Percent improvement over baseline of patient satisfaction scores of the Access dimension
    Improvement Target: Increase satisfaction scores by 0.5% above baseline (for FQHCs with established referral process in DY3)

• DY5
• [IT-6.2]: Percent improvement over baseline of patient satisfaction scores of the Access dimension
  Improvement Target: Increase satisfaction scores by 0.5% above baseline for FQHCs with an established referral process in DY4, and by 1% above baseline for FQHCs with an established referral process in DY3

Rationale:
P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals and collect data from each FQHC. P-5 will also be approached in DY2. We plan to share findings and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline score for timeliness of care at FQHCs. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective. We plan to share findings and lessons from project planning with internal and external stakeholders.

IT-6.2 will be measured beginning in DY3 to allow for time and resources needed for the FQHC to hire providers and staff, begin seeing patients, and successfully collect significant
survey data. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the FQHCs.

**Outcome Measure Valuation:** This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved/uninsured population in Harris County. It will expand capacity for primary care medical homes and connect patients to care in a timely fashion that might not otherwise be possible. A referral system will be developed for patients who seek an appointment at the Harris Health System for whom the demand cannot be met in a timely manner, as well as for patients who seek care for primary care treatable conditions in the Harris Health Emergency Centers. The value of the project is based on the incremental capacity to provide primary care services at the community FQHCs, along with timely referrals for specialty care and other needed services within the Harris Health System network. This expansion can ultimately care for the primary care needs of over eight thousand patients annually. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.
### Outcome Improvement Target 2

**[IT- 6.2]: Percent improvement over baseline of patient satisfaction (Access dimension)**

**Improvement Target:** Increase satisfaction scores by 0.5% above baseline for FQHCs with an established referral process in DY3.

**Data Source:** Press Ganey Medical Practice Surveys

**Estimated Incentive Payment:** $535,387.50

---

### Outcome Improvement Target 3

**[IT- 6.2]: Percent improvement over baseline of patient satisfaction (Access dimension)**

**Improvement Target:** Increase satisfaction scores by 0.5% above baseline for FQHCs with an established referral process in DY4 and by 1% above baseline for FQHCs with an established referral process in DY3.

**Data Source:** Press Ganey Medical Practice Surveys

**Estimated Incentive Payment:** $2,560,550

---

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $4,874,306*
Title of outcome measure (improvement target): IT-6.2-Other: Percent improvement over baseline of patient satisfaction scores: patients are getting timely care, appointments, and information

Performing Provider/TPI: Harris Health System/133355104

Unique RHP outcome identification number: 133355104.3.11 / Pass 1

Outcome Measure Description:
Process Milestones
• DY2: P-1
• DY3: P-2

Outcome Improvement Targets: IT-6.1(1)
• DY4 Target: .5% improvement over baseline
• DY5 Target: 1% improvement over baseline

Will be determined based on patient satisfaction scores for timely care, appointments, and information from Press-Ganey survey results. These surveys are currently being gathered by Press-Ganey and will incorporate the new services upon implementation of pediatric and adolescent behavioral health services.

Rationale:
The goal of this project is to increase psychiatry and behavioral therapy staffing at existing pediatric locations within Harris Health System. Expanding pediatric and adolescent behavioral health services has the potential to help decrease the future need for inpatient behavioral health beds by addressing issues at earlier stages in life. Untreated behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; the longer the issues are left untreated, the more difficult and costly it is to provide effective treatment. The increase in provider staffing throughout the existing pediatric services network can ultimately meet the behavioral care needs of an additional eight thousand patients annually.

We have selected process milestone, P-1, for DY2 in order to begin expansion of pediatric and adolescent behavioral health services at Harris Health System. This process milestone will allow us to plan for outcome reporting of patient satisfaction per our chosen outcome measure. We have selected process milestone P-2 for DY2 to establish the baseline for our outcome improvement targets to be measured in DY4 and DY5. We will begin reporting on improvement target IT-6.1(1) in DY3. By DY5 we want to increase patient satisfaction by 1% across all targeted sites. We selected a low increase because many existing sites have higher than average patient satisfaction scores within the Harris Health System. Pediatric sites start in the highest percentile ranking benchmarked to other national facilities.

Outcome Measure Valuation:
The goal of this project is to increase psychiatry and behavioral therapy staffing at existing pediatric locations within Harris Health System. Expanding pediatric and adolescent behavioral health services has the potential to help decrease the future need for inpatient behavioral health beds by addressing issues at earlier stages in life. Untreated behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; the longer the issues are left untreated, the more difficult and costly it is
to provide effective treatment. The increase in provider staffing throughout the existing pediatric services network can ultimately meet the behavioral care needs of an additional eight thousand patients annually. With this project, we project an additional 37,319 cumulative visits by DY5. While increasing access, it is important that we not only maintain, but continue to improve our patient satisfaction scores. This is especially important when increasing to such a large number of visits through the life of this project and after.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $4,493,811
**Title of Outcome Measure (Improvement Target):** IT-1.19 Antidepressant Medication Management

**Unique RHP outcome identification number(s):** 133355104.3.12

**Performing Provider Name/TPI:** Harris Health System / 133355104

**Outcome Measure Description:**
IT-1.19 will be defined as Rate A) and Rate B):

A. **Effective Acute Phase Treatment:** At least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive). The continuous treatment allows gaps in medication treatment up to a total of 30 days during the 114-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication.

B. **Effective Continuation Phase Treatment:** At least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive). Continuous treatment allows gaps in medication treatment up to a total of 51 days during the 231-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication.

The numerator for Rate A) will consist of Harris Health System discharged patients 6 years and older as of the date of discharge who were discharged alive from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year and with at least 84 days of continuous treatment with antidepressant medication during the 114-day period following the IPDS.

The numerator for Rate B) will consist of Harris Health System discharged patients 6 years and older as of the date of discharge who were discharged alive from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year and with at least 180 days of continuous treatment with antidepressant medication during the 231-day period following the IPDS.

**Denominator:** Members 6 years and older as of the date of discharge who were discharged alive from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year.

**Process Milestones:**
- DY2: P-1
- DY3: P-2, P-4

**Outcome Improvement Target(s) for each year:**
- DY4: IT-1.19 Antidepressant Medication Management
  - Increase Rate A) and Rate B): TBD
DY5: IT-1.19 Antidepressant Medication Management

Rationale:

Measurements are for any patient with a primary diagnosis of mental health and prescription of an antidepressant medication. Data will be obtained via Harris Health EHR, decision support and claims. The % of patients meeting the criteria will be sequentially increased across DY 4, 5. Baseline established in DY 3. Change text for DY4 and 5 to reflect the actual measures.

The outcome measures of adherence are important specific to the patient engagement in their disease process and the ability to effect mental health distress and behaviors exhibited as a result of major depression. Adherence to medications is a common issue in the United States and accounts for as much as 50% in chronic disease populations\(^1\) and there is approximately only 30% adherence for patients diagnosed with major depression.\(^2\)

Lack of adherence to medication regimes can be indicative of financial limitations that decrease access to necessary medications. Such barriers can be addressed by the mental health professional and the social worker in the community health center. Adherence to medications can be impacted by cultural beliefs and family dynamics that will be identified as part of this initiative and addressed in mental health sessions. Non-adherence can be related to medication side effects, guilt, and insufficient time allowed for the medication to be effective\(^2\); all of which can be explained by increasing access to mental health providers and professionals.

Process improvement milestones of P-1 and P-2 were selected as a means to permit time for engagement of stakeholders to discuss, collaborate, and implement a comprehensive approach to promote medication adherence for patients diagnosed with major depression. The provision of planning to secure supplies, and stakeholder involvement in the types of services to be offered is essential, to promote the necessary collaboration required as part of an enhanced psychiatric and mental health access to services. Project planning will also include the necessary education of providers, existing staff, recruited staff, and also development of patient materials in the healthcare language of patient choice, and at the 5th grade literacy level, specifically for Harris Health patient population. Additionally, the ability to secure key performance indicators required as part of the project and the reporting required to evaluate the outcomes delineated in DY4 and DY5 is paramount to tracking and monitoring quality, access, and cost of care. Improvement targets were placed in DY4 and DY5 in order to collect data and improve upon the established baseline determined in DY3.

Outcome Measure Valuation:

The goal of this project is to increase psychiatry and behavioral therapy staffing at current medical home primary care clinics, in existing underutilized space, to increase access to care for psychiatric mental health. All of the targeted health centers offer behavioral services; however

---

the hours and appointment availability are limited. Service hours and appointment capacity will be expanded within each of the clinics. Enhanced access to mental health services and the ability to track and monitor medication adherence will promote a decrease in acute care and emergency center visit utilization, as well as potentially decrease the need for additional inpatient psychiatric beds, thereby lowering the overall cost of care. The increase in provider staffing throughout the existing primary care services network can ultimately meet the behavioral care needs of an additional seven thousand patients annually.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5)*: $5,272,209
**Outcome Measure (Improvement Target):** IT-3.2 Congestive Heart Failure 30 Day Readmission Rate

**Performing Provider/TPI:** Harris Health System/133355104

**Unique RHP Outcome ID:** 133355104.3.13 (133355104.1.11)

**Outcome Measure Description:**
IT-3.2 Congestive Heart Failure 30 Day Readmission Rate will measure the rate of readmissions, for any cause, within 30 days of discharge from the index HF admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

The implementation of a chronic disease registry will permit the timely identification of patients at risk for acute care utilization relative to chronic disease and the respective patient’s ability to appropriately self-manage their disease process. The disease registry will be utilized to identify patients with chronic disease to include the ambulatory sensitive conditions of COPD, Asthma, Diabetes, Heart Failure and Hypertension. The outcome measurement is specifically pertinent to self-management of the heart failure disease process to educate and manage patients to decrease readmissions for heart failure (IT-3.2); within 30 days of the index admission.

A disease registry stratifies the patients according to geographic location to promote the development of accessible programs to foster education, classes, telephonic outreach and case management services specific to the chronic disease diagnosed. The disease registry tracks utilization which will promote transparency of information sharing relative to appropriate and inappropriate utilization, and facilitates provider education respective to evidence based practice for the treatment of chronic disease. The disease registry additionally displays the gaps in service availability via the monitoring of patterns of utilization locations and the hours of service accessed. The proposed will impact (based on historical data) greater than 700 patients within a one year period. This estimate is conservative as such does not include new expansion, new programs for Heart Failure, or identification of new cases via the proposed registry.

**Process Milestones:**
- DY2: P-1; P-2
- DY3: P-4

**Outcome Improvement Target(s) for each year:**
- DY4:
  - IT-3.2 Congestive Heart Failure 30 Day Readmission Rate
    - Decrease the congestive heart failure 30 day readmission rate by 1% of baseline
- DY5:
  - IT-3.2 Congestive Heart Failure 30 Day Readmission Rate
    - Decrease the congestive heart failure 30 day readmission rate by 5% of baseline
**Rationale:**
Process improvement milestones of P-1 and P-2 were selected as a means to permit time for engagement of stakeholders to secure comprehensive registry system to provide the definitive functionality required. Additionally, the ability to secure key performance indicators required electronically as part of the initiative, and the capacity for reporting will require cohesive planning, implementation, and testing prior to go-live. Improvement targets were placed in DY3-5 in order to collect data and improve upon the established baseline determined in DY2. The baseline will dictate an appropriate improvement target goal.

**Outcome Measure Valuation:**
The purpose of the implementation of a disease registry is to provide the ability to identify patients at risk based on chronic disease states and associated utilization patterns that will facilitate the ability to identify gaps in service and deficits in patient understanding and self-management of their disease. Patients with chronic illness will have improved health, via education and case management, the cost per patient is decreased due to decreased acute care and emergency visit utilization, and the patient’s quality of life is improved. Harris Health internal data for the most recent year has 47,000 patients with one or more of the top 5 diagnoses of chronic disease – heart failure, hypertension, obesity, depression, and chronic respiratory. With a disease registry allowing us to establish clear incidence and prevalence data, the cost saving opportunity related to the potential improved management of these conditions is substantial.

Title of Outcome Measure (Improvement Target): IT-4.6 Hospital-acquired Venous Thrombembolism (VTE)

Performing Provider/TPI: Harris Health System/133355104
Unique RHP outcome ID: 133355104.3.14

Outcome Measure Description:
IT- 4.6 will measure the number of cases of VTEs at Harris Health System. Reduction of VTE rates was chosen as an outcome measure as it requires process improvements from an interdisciplinary team of providers and innovators. Sustained improvements can be reached by redesigning our processes throughout Harris Health System’s inpatient settings.

Process Milestones:
- DY2: P-1
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:
- DY4:
  - IT-4.6 Hospital-acquired Venous Thrombembolism (VTE)
    - Decrease the number of cases of VTEs by 2% below baseline
- DY5:
  - IT-4.6 Hospital-acquired Venous Thrombembolism (VTE)
    - Decrease the number of cases of VTEs by 5% below baseline

Rationale:
Process milestones –P-1 through P-3 develops the infrastructure of quality improvement, clinical effectiveness, systems engineering and other expertise to build the foundation for all subsequent processes. A baseline rate (P-2) for hospital acquired Venous Thrombembolism (VTE) at Harris Health System will also be established in DY2 for performance purposes. Improvement targets were placed in DY4 and 5 based on implementation of practices with rapid testing cycles for sustainable change in multiple clinical units and hospitals.

Outcome Measure Valuation:
The goal of the center is to define high impact opportunities in patient safety, clinical effectiveness of evidence based best practices, population health, care coordination and unmet patient needs in Medicaid and uninsured patients. The center design team will partner with healthcare providers, patients and other stakeholders to develop innovation strategies and plans, and pilot the implementation. As noted earlier, centers of healthcare innovation at other prominent healthcare organizations are excellent references. The success of these programs demonstrates high reliability organizations in patient safety, clinical effectiveness, cost of care and integration of nontraditional community resources to improve health. These centers have reduced patient harm, improved mortality, reduced patient admissions, readmissions and emergency room visits, improved patient satisfaction and reduced disparities in healthcare delivery. One of the goals of the center is to reduce hospital acquired conditions. VTEs add an average cost of $63,000 per case and leads to increased morbidity and mortality. Through the expertise in the science of healthcare delivery, systems engineering, and human factors, the center will innovate to reduce variability in care delivery leading to improved outcomes. The VTE improvement program will be the initial project to build infrastructure and processes of the center. Unmet patient needs within the Medicaid and indigent population will then be targeted by the center. It will focus on high impact opportunities in patient safety, clinical effectiveness, population health and care coordination. The center will partner with providers and patients in the inpatient, outpatient, and community settings.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYS 2-5): $8,908,043
**Title of Outcome Measure (Improvement Target):** IT-5.1- Improved cost savings: Demonstrate cost savings in care delivery

**Performing Provider/TPI:** Harris Health System/133355104

**Unique RHP outcome identification number:** 133355104.3.15

**Outcome Measure Description:**
OD-5 Cost of Care – IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery

Harris Health System’s central fill will decrease costs through efficiencies gained with central fill automation (robotics, conveyor system, sorting and packing technology) thus decreasing labor costs. Therefore, we will measure the decreasing average labor cost per prescription as the percentage of total prescriptions processed through automation increases.

a) We will implement cost accounting systems to measure intervention impacts by monitoring average labor cost per prescription.

b) We will establish a method to measure cost containment by using the total salaries and benefits (as the numerator) and total number of ambulatory prescriptions filled (as the denominator) as stated on the monthly operating statements.

c) We will use the current state from the month preceding implementation as our baseline for cost. We currently have no automation.

d) We will measure cost containment by comparing the project’s average labor cost per prescription and the percentage of prescriptions filled at the central fill site to the baseline at yearly intervals.

This cost savings is based on the current volume of 2.5M total prescriptions per year.

**Process Milestones:**
- **DY2:** P-2 Establish a baseline rate

**Improvement Milestones:**
- **DY3-DY5:** IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (stand-alone)

**Outcome Improvement Targets:**
- **DY3:** Cost savings: 7% decrease in average labor cost per prescription when processing 40% of the total Harris Health System ambulatory volume at the central fill facility by the end of the year.
- **DY4:** Cost savings: 19% decrease in average labor cost per prescription over established baseline by processing 50% of the total Harris Health System ambulatory volume at the central fill facility.
- **DY5:** Cost savings: 31% decrease in average labor cost per prescription over established baseline by processing 60% of the total Harris Health System ambulatory volume at the central fill facility.
**Rationale:**

Our process milestone P-2 is to establish a baseline cost based on current state before implementation of central fill.

Outcome Improvements will be analyzed by the Cost Benefit Analysis comparing the average labor cost per prescription at the goal percentage rates compared to baseline average labor cost per prescription.

Considering that there is no current automation at Harris Health System Department of Pharmacy for prescription processing, the baseline rate will be the average labor cost per prescription when 0% of prescriptions are filled at the central fill facility. The data source will be the monthly operating statement from the month prior to go-live.

In DY3 cost savings result from a 7% decrease the average labor cost per prescription using the total salaries and benefits/total number of Harris Health System prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY4, cost savings result from a 19% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of Harris Health System prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY5, cost savings result from a 31% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of Harris Health System prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

**Outcome Measure Valuation:** This project is a supporting pillar for one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Harris County. The value of the project is based on cost avoidance, projecting savings associated with reducing the costs incurred in filling 2.5 million current patient prescriptions on an annual basis. Based on the increase in primary care volumes addressed in several other Harris Health System Waiver projects, further growth in volume to over 3.0 million prescriptions is projected. Despite this increase in prescription volume, processing costs are projected to decrease in total with the addition of the central fill function. The prompt availability of needed prescriptions for our underserved patients, particularly those with chronic disease that can be managed effectively with appropriate pharmaceuticals, will result in fewer emergency room visits for public and private hospitals located in the service area, and will also help to prevent future downstream inpatient admissions.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $6,830,658
Title of Outcome Measure (Improvement Target): IT-9.4 Reduce ER Utilization for Frequent User Cohort

Performing Provider/TPI: Harris Health System/133355104

Unique RHP Outcome Identification Number: 133355104.3.16

Outcome Measure Description:
IT-9.4 will measure the reduction in ER utilization for the identified frequent user cohort.

This project will identify the highest utilizers of emergency room services in the Harris health System, and implement personalized navigation and management plans in order to decrease the annual rate of usage for these patients. The value of the project is based on cost savings associated with a substantial reduction in the utilization of emergency services, as well as helping to prevent future downstream inpatient admissions that frequently occur in this population. While the initial focus will begin with the top 100 patients, as the program expands we will drill further into the emergency room population and enroll more patients, as appropriate.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Targets:
- DY4: Reduce utilization rate by 10% compared to baseline
- DY5: Reduce utilization rate by 20% compared to baseline

Rationale:
Because this is a new service, process milestones P-1 and P-2 were selected in order to plan for the program and establish baseline metrics. Outcome IT-9.4 was selected to measure overall utilization of ER resources by the most frequent users. Decreases in ER resource utilization will reflect the success of the navigation program. The goals reflect that not all patients may engage fully in the navigation program. 1

In 2010, over 40% of Harris County ER visits by Harris County residents were primary care related, these include visits for conditions that are non-urgent, primary care treatable, and primary care preventable. The average cost to treat these patients in the ER versus a primary care setting was approximately $800 per visit for all age groups. Connecting patients who frequent the ER with consistent, coordinated primary and specialty care access will improve clinical outcomes, which will decrease the need to access emergent services.

**Outcome Measure Valuation:**
This project will identify the highest utilizers of emergency room services in the Harris health System, and implement personalized navigation and management plans in order to decrease the annual rate of usage for these patients. The value of the project is based on cost savings associated with a substantial reduction in the utilization of emergency services, as well as helping to prevent future downstream inpatient admissions that frequently occur in this population. While the initial focus will begin with the top 100 patients, as the program expands we will drill further into the emergency room population and enroll more patients, as appropriate.

Title of Outcome Measure (Improvement Target): IT-9.4-Reduce Left Without Being Seen (LWBS) Rates for ESI Level 4 and 5

Performing Provider/TPI: Harris Health System/133355104
Unique RHP Outcome Identification Number: 133355104.3.17

Outcome Measure Description:
In an effort to improve the quality of care and patient satisfaction, it is a common goal of emergency centers to provide contact to a provider as quickly as possible. Patients who present with low acuity complaints (ESI 4&5) are often faced with long wait times as care for higher acuity patients is expedited, and because of this, some patients will choose to leave the EC to seek care elsewhere. The number of patients who leave the EC prior to contact with a provider is identified as the left without being seen rate (LWBS). The Harris Health System plans to implement a physician-in-triage model to address these challenges. We expect that these triage providers will be able to assess patients quickly, identify patients with low acuity complaints and refer them to same-day access clinics that would be able to address their care needs. The outcome measures for the project will be the LWBS rates for patients triaged to ESI 4&5.

We expect that this project will improve the overall efficiency of the healthcare system by helping patients with non-urgent conditions receive appropriate care in a more cost effective setting. We also expect that the time from arrival to provider contact will be reduced under this new model, and thus reducing the percentage of patients that choose to leave the EC prior to provider contact (LWBS rate). Because the provider-in-triage model is a new service for the Harris Health System, process milestones P-1 and P-2 were selected in order to plan for the program and establish baseline metrics. In DY2, we will complete a full project plan with written guidelines for the triage provider to follow. In DY3, we will establish baseline LWBS rates for these ESI 4&5 patients and expected target reductions in LWBS rates over DY4-5.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Targets:
- DY4 and DY5: IT-9.4 – Reduce Left Without Being Seen (LWBS) rates for ESI Level 4 and 5 patients
  o Improvement Targets: TBD

Rationale:
In 2010, over 40% of Harris County ER visits by Harris County residents were primary care related, these include visits for conditions that are non-urgent, primary care treatable, and primary care preventable. The average cost to treat these patients in the ER versus a primary care setting was approximately $800 per visit for all age groups. Referring patients with primary care
treatable conditions to proximate same day clinics can help to reduce costs of care for the affected individual patients, freeing resources and improving efficiency for patients who need emergent care.

**Outcome Measure Valuation:**
This project will improve patient throughput times for patients appropriately utilizing emergency room services, and improve the overall efficiency of the healthcare system by helping patients with non-urgent conditions receive appropriate care in a more cost effective setting. The value of the project is based on cost savings associated with a reduction in the utilization of emergency services by non-urgent patients. Referring patients with primary care treatable conditions to proximate walk-in clinics can also help to reduce costs of care for the affected individual patients, freeing resources and improving efficiency for patients who need emergent care.

We expect that this project will improve the overall efficiency of the healthcare system by helping patients with non-urgent conditions receive appropriate care in a more cost effective setting. We also expect that the time from arrival to provider contact will be reduced under this new model, and thus reducing the percentage of patients that choose to leave the EC prior to provider contact (LWBS rate). Because the provider-in-triage model is a new service for the Harris Health System, process milestones P-1 and P-2 were selected in order to plan for the program and establish baseline metrics. In DY2, we will complete a full project plan with written guidelines for the triage provider to follow. In DY3, we will establish baseline LWBS rates for these ESI 4&5 patients and expected target reductions in LWBS rates over DY4-5.

In addition to the value of improved care for these patients, we also expect the project to have a cost savings associated with a reduction in the utilization of emergency services by non-urgent patients. Referring patients with primary care treatable conditions to proximate walk-in clinics can also help to reduce costs of care for the affected individual patients, freeing resources and improving efficiency for patients who need emergent care.

**Title of Outcome Measure (Improvement Target):** IT-10.1 Quality of Life

**Performing Provider/TPI:** Harris Health System/133355104

**Unique RHP Outcome ID:** 133355104.3.18 / Pass 2

**Outcome Measure Description:**
As Performing Provider for project 133355104.1.13, Harris Health System decided to measure improvement in quality of life is the Short Form Health Survey (SF-12). This is an outcome domain OD-10 Quality of Life/Functional Status Measure that is specifically IT-10.1 Quality of Life. The performing provider will be the physical or occupational therapist providing services.

This outcome measure was selected because it is able to be used on individuals from a wide range of age groups and treatment groups with a variety of diseases and conditions. In addition, this outcome measure is available in over 140 translations. This tool is evidence based and validated for a wide range of diagnostic groups that are routinely seen in outpatient services.

The SF-12 is a multipurpose, 12-item survey that measures eight domains of health: physical functioning, role limitations due to physical health, bodily pain, general health perceptions, vitality, social functioning, role limitations due to emotional problems, and mental health. It yields scale scores for each of these eight health domains, and two summary measures of physical and mental health: the Physical Component Summary (PCS) and Mental Component Summary (MCS). Patients will complete the Short Form Health Survey (SF-12) upon initial evaluation and upon discharge from Physical or Occupational Therapy to measure the patient’s perceived quality of life before and after therapy intervention. With this outcome measure, improvement in quality of life will be demonstrated by an increased score at discharge from the score at initial evaluation. The scores will vary from patient to patient, but an average score is above a 50. The determined outcome improvement target for each year and patient will be to improve the score to greater than 50 at discharge from physical and occupational therapy.

**Process Milestones:**
- **DY2:** P-4
- **DY3:** P-2
- **DY4:** P-5

**Outcome Improvement Target(s) for each year:**
- **DY4:**
  - IT-10.1 Quality of Life
  - Improve quality of life (QOL) scores to greater than 50 at discharge from therapy for at least 10% of the patients seen in DY4
- **DY5:**
  - IT-10.1 Quality of Life
  - Improve quality of life (QOL) scores to greater than 50 at discharge from therapy for at least 20% of the patients seen in DY5

**Rationale:**
Milestones P-2 and P-4 were chosen to determine the baseline Quality of Life data for the population served and design a method to organize data and determine appropriate interventions to improve Quality of Life in order to determine the outcome improvement targets for the
specific population served in years 3, 4, and 5. Milestone P-5 was chosen to ensure that the baseline data, lessons learned, and best practices be disseminate to the stakeholders and specialty providers to improve Quality of Life with improved access to care.

The average QOL score is above a 50; therefore, Improvement Targets in DY4 and DY5 aim to improve QOL scores to greater than 50 at discharge from therapy for at least 10% of the patients seen in DY4 and 20% of patients seen in DY5.

**Outcome Measure Valuation:**

This project will increase the capacity to provide outpatient physical and occupational therapy services to the underserved areas of Harris County, primarily low-income, uninsured and Medicaid populations. The expanded Outpatient Physical Therapy and Occupational Therapy (PT and OT) services will be targeted to populations who are at risk for impairments in activities of daily living resulting from a lack of access to specialty care. The project will improve access by providing an additional 12 PT and OT providers to the Rehabilitation Services department and by adding additional outpatient therapy treatment space near the referring clinics, facilitating an increase in the number of patients seen per month by specialty Physical and Occupational Therapy services of 510 patients. The project will result in improved quality of life by persons served, measured by a standard health survey. The outcome measure goals of this project are to increase the quality of life measure for 10% of patients in DY4 and 20% of patients in DY5. The added value to the improved quality of life per patient in this project was the basis for the valuation of this particular outcome measure.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD**<br>(*add outcome amounts over DYs 2-5*): $3,626,484
Title of Outcome Measure (Improvement Target): IT 6.2- Other: Percent improvement over baseline of Patient Satisfaction scores

Unique RHP outcome identification number(s): 133355104.3.19 / Pass 2
Performing Provider Name/TPI: Harris Health System / 133355104

Outcome Measure Description:
IT 6.2 will measure improvement in the overall mean score for patient satisfaction over time using the standard same day access clinic survey supplied by Press Ganey and approved by HHSC.

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For Casa de Amigos Health Center, there were 107 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. As a result, patient satisfaction scores reported by Press Ganey can be greatly improved. From November 2011-October 2012 at Casa de Amigos Health Center, the mean score for “Ease of scheduling appointments” was 74.7.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Casa same day access clinic will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

Process Milestones:
- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT 6.2- 0.5% improvement over baseline of patient satisfaction for overall mean survey score
- DY5:
  - IT 6.2- 1% improvement over baseline of patient satisfaction for overall mean survey score

Rationale:
P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in
partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline score at the new same day access clinic based on available performance. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT- 6.2 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic. Based on Harris Health System’s historic Press Ganey patient satisfaction scores and the volume of patients served, we believe the percent improvement goals suggested are both challenging and meaningful.

Outcome Measure Valuation:
This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic’s capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Currently, some patients do not rate Harris Health positively due to the fact that waitlists to see providers are at times sixty plus days because of the high demand and limited providers. Because of the current back-log of patients, Harris Health System assures that by building a Casa de Amigos Same Day Access clinic, we will meet the basic needs of thousands of more patients in a timely manner, giving Harris Health the ability to survey potentially 31,000 additional patients between DY3 and DY5, increasing the patient satisfaction score. From 2011 to 2012, Harris Health System’s existing Ambulatory Care Health Centers patient satisfaction score improved 2% across all centers combined, leading us to believe that the goals we have established will be both challenging and meaningful upon establishing a baseline. For this project, Harris Health will implement a new survey tool for a different environment in which care will be provided; therefore, we wanted to keep the goals achievable as this will be a new endeavor for our system in terms of same day clinics and patient satisfaction.

</table>
**Title of Outcome Measure (Improvement Target):** IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider. (Standalone measure)

**Unique RHP outcome identification number:** 133355104.3.20 / Pass 2

**Performing Provider name/TPI:** Harris Health System / TPI 133355104

**Outcome Measure Description:**

Process Milestones
- DY2: P-1; P-5
- DY3: P-2

Outcome Improvement Milestones and Targets:
- DY4:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with diabetes accessing dental services following referral by their medical provider. Target: 5% increase over baseline
- DY5:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with diabetes accessing dental services following referral by their medical provider. Target: 7% increase over baseline

**Rationale**
In DY2, we will focus on process milestone P-1 chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. P-5 will also be completed in DY2 as we share findings and lessons from project planning with internal and external stakeholders. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to increase the percentage of patients with diabetes who access our dental services following a referral. We chose a low target because the demand is greater than the access.

**Outcome Measure Valuation:**
There is limited access for oral health, particularly for the low-income, uninsured, and Medicaid populations. Oral health is vital in disease prevention. Bad oral health care increases the risk of heart disease, diabetes and stroke. By adding and expanding dental services to six sites, we will be increasing access to oral health services for the underserved in Harris County, and thereby helping to reduce disparities. The expanded services in Harris Health clinics can ultimately address the routine dental care needs of over ten thousand patients, or 26,050 additional visits, annually. Treating cavities and other oral health problems will assist in providing healthcare cost savings by preventing or mitigating the effects of other chronic diseases, with a specific focus on the diabetic population.
### Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider.

Harris County Hospital District Ben Taub General Hospital
Pass 3
**Title of Outcome Measure (Improvement Target):** IT-9.2 ED Appropriate Utilization

**Unique RHP outcome identification number:** 133355104.3.21 / Pass 3

**Outcome Measure Description:**
OD-9:IT-9.2

- **Process Milestones selected:**
  o DY2: (P-1) Project planning
  o DY3: (P-2) Establish baseline rates of ED utilization

- **Improvement targets selected:**
  o DY4: (IT-9.2) Improvement Target: 5% reduction below baseline
  o DY5: (IT-9.2) Improvement Target: 10% reduction below baseline

**Rationale:**

Because of transportation and logistic challenges, many homebound patients are using the ED as their source of primary care, the wrong care in the wrong (and most expensive) place. By providing continuity care in these patients’ homes, we will reserve the ED for appropriate use. With 24 hour phone access and (limited) capacity for urgent visits for heart failure or COPD exacerbations, even some otherwise “appropriate” use may be curtailed. This is why the house calls program has chosen to measure ED utilization in Category 3.

We will use the historical data from each individual as their own baseline, assessing the number of ED visits in the prior months to calculate their ED visit/pt year use. DY3 will be utilized to acquire this data. We will then continue to monitor ED visits and expect a 5% decrease in DY4 and 10% decreased in the overall ED visit/pt year rate in DY5.

**Outcome Measure Valuation:**

This project will expand the House Calls Program in order to improve access, maximize independence, and realize cost savings by providing comprehensive, coordinated, multidisciplinary primary care at home to a population of patients that are homebound or have difficulties getting to clinic visits. The geographical challenges of the region will be addressed by a logistics approach using regional cohorting, and the house calls model will create patient-centered, coordinated primary care delivery that improves patient satisfaction and health outcomes, reduces unnecessary services, and builds on the accomplishments of our existing health care system. The present house calls team is very modest, delivering care to 180 housebound patients. By the end of the demonstration period, the two interdisciplinary teams including physicians, nurse practitioners, social workers, pharmacists, therapists, and integrated call center and support team are expecting to manage 1,000 patients in their homes and make approximately 5,000 house calls in the year. The expected impact will be several thousand fewer ambulance rides, 2,800 fewer EC visits, 1,000 fewer admissions, resulting in millions of dollars in cost avoidance and realized savings.-By decreasing inappropriate ED utilization by established house calls patients to 10% below baseline by DY5, there are significant cost savings that add value to this project. It must also be noted that the overall satisfaction of the patient will increase, as unnecessary ED visits and long waits are avoided.

Title of Outcome Measure (Improvement Target): IT-7.4 Topical Fluoride application (Non-Standalone measure)

Unique RHP outcome identification number(s): 133355104.3.23/ Pass 3

Performing Provider name/TPI: Harris Health System/133355104

Outcome Measure Description:

Process Milestones:
- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2 Establish baseline rates of children receiving fluoride application within the Harris Health System pediatric dental clinics

Improvement Milestones and Targets:
- DY4:
  - IT-7.4 Topical Fluoride application
    Target: 30% increase from baseline of children receiving fluoride application
- DY5:
  - IT-7.4 Topical Fluoride application
    Target: 50% increase from baseline of children receiving fluoride application

Rationale:
In DY2, we will focus on process milestone P-1 to allow Harris Health to plan for the implantation of pediatric dental clinics. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to increase the number of fluoride applications to prevent more costly adverse effects.

Outcome Measure Valuation:
The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for Chronic Disease Prevention and Health Promotion). Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life. Fluoride varnish helps stop cavities that have started and helps prevent new ones. Therefore, increasing
the percentage of children that receive fluoride applications will decrease the risk of more costly oral health problems and treatments later in life.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $2,506,265*
**Title of Outcome Measure (Improvement Target):** IT- 8.2 Percentage of Low Birth-Weight Births

**Unique RHP outcome identification number(s):** 133355104.3.24 / Pass 3  
**Performing Provider Name/TPI:** Harris Health System / 133355104

**Outcome Measure Description:**  
IT- 8.2 will be defined as babies born weighing <2,500 grams at birth (numerator) and will measure the percentage of low birth-weight births among those patients who have completed the OB Navigation program by the time of delivery at a Harris Health System hospital. Harris Health System is the performing provider for this project and Category 3 outcome measure.  
Harris County’s low birth weight rate (8.8 %) for the same year is higher than the Healthy People 2020 goal of 7.8% and higher than the 2010 national average of 8.15%. Moreover, the percentage of low birth-weight births at the Harris Health System (LBJ General Hospital and Ben Taub General Hospital combined) for 2011 was 9.9%. Low birth-weight rate is also a Healthy People 2020 objective. IT-8.2 will measure the percentage of low birth-weight births among those patients who have completed the OB Navigation program (received the intervention) by the time of delivery at a Harris Health System hospital. The definition of “program completion” will be determined during the DY2 planning period. While we know that the 2011 percentage was 9.9%, we will collect more recent baseline data during DY3 for the low birth-weight percentage. The DY3 baseline will be used for performance measurement.

**Process Milestones:**  
- DY2: P-1; P-3; P-5  
- DY3: P-2; P-3

**Outcome Improvement Target(s) for each year:**  
- DY4:  
  - IT- 8.2 Percentage of Low Birth-Weight Births  
    - Of those patients who received the intervention, decrease the percentage of babies born weighing <2,500 grams at birth to less than DY2 baseline  
- DY5:  
  - IT- 8.2 Percentage of Low Birth-Weight Births  
    - Of those patients who received the intervention, decrease the percentage of babies born weighing <2,500 grams at birth to a rate to be determined

**Rationale:**  
Process milestones –P-1 through P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor timeliness of prenatal and postnatal care within the Harris Health System. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3. In DY3 we will establish baseline percentage with P-2. P-5 will be approached in DY2, after the initial gap analysis is completed. Lessons learned will be shared with the Region and stakeholders. Improvements targets were placed in DY4 and 5 based on the timeframe allowed to put in place the proper resources and processes needed to collect data. The improvement target goal will be to achieve a low birth-weight percentage below the baseline percentage to be determined in in DY3. The performance during DY4, whether high or low, will dictate an appropriate
improvement target goal for DY5. It is also important to note that the outcome measure being addressed may be affected by social determinants other than prenatal encounters with navigators and providers. For instance, psychosocial, mental health, demography trends, and behavioral issues will affect the incidence of low birth-weight births. In addition, the long timeframe needed to realize perinatal outcomes results for full-term pregnancies was considered when determined improvement targets. Patients in the project will be enrolled at the beginning of pregnancy and will need to be followed over time.

**Outcome Measure Valuation:**

The goal of this project is to utilize community health workers, case managers, social workers, and nurses as a comprehensive patient navigation team that will provide enhanced care coordination, community outreach, social support and culturally competent care to high-risk obstetrics patients throughout their pregnancy. The estimated number of high risk cases at Harris Health on an annual basis is over 2,000. All of those cases will be targeted by this program, with a goal to decrease the percentage of low birth-weight births among patients who complete the program and deliver at Harris Health System. Of those patients who receive patient navigation services, the goal is to decrease the percentage of babies born weighing <2,500 grams at birth to less than DY2 baseline.

**Title of Outcome Measure (Improvement Target):** IT-1.20 Management of International Normalized Ratio (INR) for patients receiving anticoagulation monitoring

**Unique Project Identification number:** 133355104.3.25/ Pass 3  
**Performing Provider Name/TPI#:** Harris Health System/133355104

**Outcome Measure Description**  
IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient). We will divide the number of patients with INR at goal for 2 consecutive visits by the total number of patients with monitored INR to establish the baseline percentages within the Harris Health System.

**Process Milestones:**
- **DY2: P-2**

**Outcome Improvement Target(s) for each year:**
- **DY3:**
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 35% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3
- **DY4:**
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 40% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3
- **DY5:**
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 50% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3

**Rationale:**
Process milestone P-2 was chosen to determine the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient). We will divide the number of patients with INRs at goal for 2 consecutive visits by the total number of patients being monitored to establish the baseline percentages within the Harris Health System. Reports run from EPIC® (our electronic medical record system) will allow us to capture the baseline data needed and this will be completed in DY2. Improvement targets were placed in DY3 thru DY5 and are on contingent on our ability to accurately establish the baseline rate in DY2. Improvement target goals will be determined after baseline percentage is set in DY2. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

**Outcome Measure Valuation:**

In recent years there has been an increasing shift in warfarin therapy management from standard care by a physician to dedicated anticoagulation clinic models. Pharmacist-managed
anticoagulation clinics provide patients with expert care, frequent monitoring, and education to ensure optimal outcomes and increased patient safety. Education and patient involvement have been shown to increase compliance, leading to improved patient outcomes as a result of more frequent monitoring. This project significantly enhances our existing delivery system by increasing availability of persons qualified to manage acute and chronic care needs as related to anticoagulation management. This increase in availability not only allows for timely and more frequent patient follow up but also decreases the risk of potential complications which may require management in the acute care setting, resulting in a measurable reduction in the number of hospital admissions and emergency room visits secondary to the warfarin complications rate.
### Process Milestone 1

- **P-2** Establish baseline rates for percentage of patients seen by clinical pharmacists with at least 2 consecutive INRs
  
  **Data Source:** EHR

**Estimated Incentive Payment (maximum amount):** $1,327,433

### Outcome Improvement Target 1

**[IT-1.20]: Management of INR for patients receiving anticoagulation monitoring**

- **Improvement Target:** 20% increase from baseline of the number of patients seen by clinical pharmacists with at least 2 consecutive INRs at goal.
  
  **Data Source:** EHR

**Estimated Incentive Payment:** $204,025

### Outcome Improvement Target 2

**[IT-1.20]: Management of INR for patients receiving anticoagulation monitoring**

- **Improvement Target:** 30% increase from baseline of the number of patients seen by clinical pharmacists with at least 2 consecutive INRs at goal.
  
  **Data Source:** EHR

**Estimated Incentive Payment:** $300,995

### Outcome Improvement Target 3

**[IT-1.20]: Management of INR for patients receiving anticoagulation monitoring**

- **Improvement Target:** 40% increase from baseline of the number of patients seen by clinical pharmacists with at least 2 consecutive INRs at goal.
  
  **Data Source:** EHR

**Estimated Incentive Payment:** $716,536

### Year 2 Estimated Outcome Amount:

- **(target):** $1,327,433

### Year 3 Estimated Outcome Amount:

- **(target):** $204,025

### Year 4 Estimated Outcome Amount:

- **(target):** $300,995

### Year 5 Estimated Outcome Amount:

- **(target):** $716,536

### TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD

*(add outcome amounts over DYs 2-5): $ 2,548,989*
Title of Outcome Measure (Improvement Target): IT-2.13 Other Admissions Rate

Unique Project Identification number: 133355104.3.26/ Pass 3
Performing Provider Name/TPI#: Harris Health/133355104

Outcome Measure Description:
IT-2.13 will be defined as other admissions rates and will measure the number of hospital admissions and emergency room visits secondary to warfarin complications at Harris Health System.

Process Milestones:
- DY2: P-2

Outcome Improvement Target(s) for each year:
- DY3:
  - IT-2.13 Other admissions rate: hospital admissions and emergency room visits secondary to warfarin complications
    - 10% reduction from baseline in the number of hospital admissions and emergency room visits secondary to warfarin complications rate at the end of DY3
- DY4:
  - IT-2.13 Other admissions rate: hospital admissions and emergency room visits secondary to warfarin complications
    - 20% reduction from baseline in the number of hospital admissions and emergency room visits secondary to warfarin complications rate at the end of DY4
- DY5:
  - IT-2.13 Other admissions rate: hospital admissions and emergency room visits secondary to warfarin complications
    - 40% reduction from baseline in the number of hospital admissions and emergency room visits secondary to warfarin complications rate at the end of DY5

Rationale:
Process milestone P-2 was chosen to determine baseline rates for hospital admissions and emergency room visits secondary to warfarin complications within the Harris Health System. Reports run in EPIC® (our electronic medical record system) will allow us to capture the baseline data needed and this will be completed in DY2. Improvement targets were placed in DY3 thru DY5 and are contingent on our ability to accurately establish baseline rates in DY2. Improvement target goals will be determined after baseline rates are set in DY2. The baseline rates, whether high or low, will dictate an appropriate improvement target goal.

Outcome Measure Valuation:
In recent years there has been an increasing shift in warfarin therapy management from standard care by a physician to dedicated anticoagulation clinic models. Pharmacist-managed anticoagulation clinics provide patients with expert care, frequent monitoring, and education to ensure optimal outcomes and increased patient safety. Education and patient involvement have been shown to increase compliance, leading to improved patient outcomes as a result of more
frequent monitoring. This project significantly enhances our existing delivery system by increasing availability of persons qualified to manage acute and chronic care needs as related to anticoagulation management. This increase in availability not only allows for timely and more frequent patient follow up but also decreases the risk of potential complications which may require management in the acute care setting, resulting in a measurable reduction in the number of hospital admissions and emergency room visits secondary to the warfarin complications rate.
### Process Milestone 1 [P-2]: Establish baseline rates for hospital admissions and emergency room visits secondary to warfarin complications

**Data Source:** EHR

**Estimated Incentive Payment (maximum amount):** $1,327,433

### Outcome Improvement Target 1 [IT-2.13 Other Admissions Rate]

**Improvement Target:** 5% reduction from baseline in hospital admissions and emergency room visits secondary to warfarin complications

**Data Source:** EHR, Claims

**Estimated Incentive Payment:** $204,025

### Outcome Improvement Target 2 [IT-2.13 Other Admissions Rate]

**Improvement Target:** 10% reduction from baseline in hospital admissions and emergency room visits secondary to warfarin complications

**Data Source:** EHR, Claims

**Estimated Incentive Payment:** $300,995

### Outcome Improvement Target 3 [IT-2.13 Other Admissions Rate]

**Improvement Target:** 15% reduction from baseline in hospital admissions and emergency room visits secondary to warfarin complications

**Data Source:** EHR, Claims

**Estimated Incentive Payment:** $716,536

### Year 2 Estimated Outcome Amount:

- (target): $1,327,433

### Year 3 Estimated Outcome Amount:

- $204,025

### Year 4 Estimated Outcome Amount:

- $300,995

### Year 5 Estimated Outcome Amount:

- $716,536

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYS 2-5):** $2,548,989
**Title of Outcome Measure (Improvement Target):** IT-6.1—Patient Satisfaction

(4) patient’s involvement in shared decision making

**Unique RHP outcome identification number(s):** 133355104.3.27 / Pass 3

**Outcome Measure Description:**

IT-6.1  Percent Improvement over Baseline of Patient Satisfaction Scores related to involvement in shared decision making

**Process Milestones:**

- **DY2:**
  - P-7—Other activities not described: Determine baseline of Outpatient satisfaction scores related to shared decision making
  - P-4—Conduct Plan-Do-Study-Act cycles to improve data collection and intervention activities

- **DY3:**
  - P-4—Conduct Plan-Do-Study-Act cycles to improve data collection and intervention activities

**Outcome Improvement Targets for each year:**

- **DY3:**
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 5% over baseline for shared decision making

- **DY4:**
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 10% over baseline for shared decision making

- **DY5:**
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 15% over baseline for shared decision making

**Rationale:**

Process milestone P-7 was chosen to capture the degree to which providers and patients are engaged in the health promotion effort at baseline. Process milestone P-4 was chosen so that rapid ongoing improvements in the program’s effectiveness and reach can be implemented and the outcome improvement targets can be reached throughout DY3-DY5.[18, 19]

The improvement target (IT-6.1) was chosen based on evidence that patient satisfaction surveys are an acceptable proxy of quality care provision in healthcare settings.[17] The improvement in patient satisfaction will compliment the Category 2 Improvement measure. It is believed the more patients who receive health promotion through their primary care provider and medical home, the more will view this aspect of care favorably and will express satisfaction in the shared decision making activities in which they engage with their providers around the issues of health promotion and healthy eating.

**Outcome Measure Valuation:**

The goal of the this project is to develop a program for promoting increased consumption of fruits and vegetables among primary care patients through an integrated approach that
includes multi-provider and multi-modal patient education and access to a clinic-based farmer’s market. Providers in Harris Health System recognize the need to counsel patients on healthy lifestyle behavior, but are often hesitant because of the challenges patients face with compliance. This project will leverage the motivating power of the provider-patient relationship. It will equip providers with a tangible tool (prescription) to use in their counseling and will give patients a specific avenue for adoption of the recommended behavior. The goal will be to educate 1,000 patients monthly across 10 medical home sites on the health promoting benefits of fruit and vegetable intake. Evidence from studies like Dietary Approaches to Stop Hypertension have determined that diets high in fruits and vegetables can reduce blood pressure, stroke risk, and weight. It has also been shown to prevent some cancers, and diabetes. Given the high level of chronic disease in the Harris Health patient population, improved diet can have immediate positive impact on the health of our patients, and result in long-term savings in emergency and acute care costs.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5)*: $2,407,008
**Title of Outcome Measure (Improvement Target):** IT-13.1 Pain assessment (NQF-1637)

**Unique RHP outcome identification number:** 133355104.3.28/ Pass 3  
**Performing Provider/TPI:** Harris Health System/133355104

**Outcome Measure Description:**

IT-13.1 Pain assessment (NQF-1637) *(Non-standalone measure)*

Increase the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening.

Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

**Process Milestones:**

- DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3: P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**

- DY 4: Increase by 3% the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening.
  Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

- DY 5: Increase by 5% the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening.
  Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

**Rationale:**

Research on care of patients with serious incurable illness and those nearing the end of life shows they experience high rates of pain (40-70% prevalence) and other physical, emotional, and spiritual causes of distress. Pain is under-recognized by clinicians and undertreated, resulting in excess suffering from patients with serious illness. Pain screening and assessments are necessary in order to improve the patient centered outcome of pain, and its effects on global outcomes of function and quality of life.

**Outcome Measure Validation:**

The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is
frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement. Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 1,000 patients by the end of DY5. The research available regarding palliative care shows significant reductions in pharmacy, laboratory, and intensive care costs for care coordinated through a palliative program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $2,181,113
**Title of Outcome Measure (Improvement Target):** IT-13.3 Proportion with more than one emergency room visit in the last days of life (NQF 0211)

**Unique RHP outcome identification number:** 133355104.3.29/ Pass 3

**Performing Provider/TPI:** Harris Health System/133355104

**Outcome Measure Description:**

IT-13.3 Proportion with more than one emergency room visit in the last days of life (NQF 0211)- Decrease the percentage of patients who died from cancer or another life-limiting illness with more than one emergency room visit in the last days of life. *(Standalone measure)*

**Process Milestones:**

- DY2: P- 2 Establish baseline rates
- DY3: P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

**Outcome Improvement Targets for each year:**

- DY4: IT-13.3 Decrease the percentage of patients who died from cancer or another life-limiting illness with more than one emergency room visit in the last days of life by 3%.
- DY5: IT-13.3 Decrease the percentage of patients who died from cancer or another life-limiting illness with more than one emergency room visit in the last days of life by 5%.

**Rationale:**

Generally, emergency centers are not organized to provide comfort and palliative care. Although, when operationalized as a claims-based measure, this does not take patient preferences into account, the idea is for the measure to be seen as an overall indication of practice style and/or available palliative resources. An individual patient experiencing this process of care has not necessarily received poor quality care, but unless there is a reason to think that the patients in one setting have a significantly greater proportion with differing preferences, aggregate rates of the measure can justifiably be compared across settings. In this way it is a reflection of the quality of end-of-life care.

**Outcome Measure Valuation:**

The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement. Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 1,000 patients by the end of DY5. </tbody>
</table>

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $2,181,113
**Title of Outcome Measure (Improvement Target):** IT-13.4 Proportion admitted to the ICU in the last 30 days of life (NQF 0213)

**Unique RHP outcome identification number:** 133355104.3.30/ Pass 3

**Performing Provider/TPI:** Harris Health System/133355104

**Outcome Measure Description:**

IT-13.4 Proportion admitted to the ICU in the last 30 days of life (NQF 0213) - Percentage of patients who died from cancer or other life-limiting illness admitted to the ICU in the last 30 days of life. *(Standalone measure)*

**Process Milestones:**

- DY2: P-2 Establish baseline rates
- DY3: P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

**Outcome Improvement Targets for each year:**

- DY4: IT-13.4 Decrease the percentage of patients who died from cancer or other life-limiting illness admitted to the ICU in the last 30 days of life by 3%.
- DY5: IT-13.4 Decrease the percentage of patients who died from cancer or other life-limiting illness admitted to the ICU in the last 30 days of life by 5%.

**Rationale:**

Using patient satisfaction with end-of-life care as a desired outcome, patient survey data reflect patients’ desires to die at home and to not be connected to machines at the end-of-life. ICU use near the end of life may indicate a lack of discussion about advance directives. ICU care is expensive and uncomfortable, and generally not appropriate for the dying patient.

**Outcome Measure Validation:**

The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement. Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 1,000 patients by the end of DY5. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $ 2,181,113*
Title of Outcome Measure (Improvement Target): IT-7.1 Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Non-standalone measure)

Unique RHP outcome identification number(s): 133355104.3.31/ Pass 3

Performing Provider name/TPI: Harris Health System/133355104

Outcome Measure Description:

Process Milestones:
- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2 Establish baseline number of children age 6-9 that have seen a dental provider within the Harris Health System and have a dental sealant on a permanent first molar tooth.

Improvement Milestones and Targets:
- DY4:
  - IT-7.1 Dental Sealant: Number of children age 6-9 with a dental sealant on a permanent first molar tooth.
  - Target: Increase by 20% of DY3 baseline.
- DY5:
  - IT-7.1 Dental Sealant: Number of children age 6-9 with a dental sealant on a permanent first molar tooth.
  - Target: Increase by 30% of DY3 baseline.

Rationale:
In DY2, we will focus on process milestone P-1 to allow Harris Health to plan for the implantation of pediatric dental clinics. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to increase the number of children age 6-9 with a dental sealant on a permanent first molar tooth by increasing access to dental care.

Outcome Measure Valuation:
The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for...
Chronic Disease Prevention and Health Promotion). Sealants can provide protection from dental decay or cavities. Applying dental sealants is more cost effective than filling a cavity. By increasing the number of children with dental sealants, we are reducing the risks of cavities.

**Title of Outcome Measure (Improvement Target):** IT-7.6 Urgent Dental Care Needs in Children: Percentage of children with urgent dental care needs (Standalone measure)

**Unique RHP outcome identification number(s):** 133355104.3.32/ Pass 3

**Performing Provider name/TPI:** Harris Health System/133355104

**Outcome Measure Description:**

**Process Milestones:**

- **DY2:**
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

- **DY3:**
  - P-2 Establish baseline rates of patients of record with urgent dental care needs within the Harris Health System pediatric dental clinics

**Improvement Milestones and Targets:**

- **DY4:**
  - IT-7.6 Urgent Dental Care Needs: Percentage of patients of record with urgent dental care needs. Target: Reduce by 5% of DY3 baseline

- **DY5:**
  - IT-7.6 Urgent Dental Care Needs: Percentage of patients of record with urgent dental care needs. Target: Reduce by 10% of DY3 baseline

**Rationale:**

In DY2, we will focus on process milestone P-1 to allow Harris Health to plan for the implantation of pediatric dental clinics. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to decrease the percentage of children of record seen within our pediatric dental clinics with urgent dental care needs by providing preventive dental treatments.

**Outcome Measure Valuation:**

The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for...
Chronic Disease Prevention and Health Promotion). Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life. By providing preventative oral health services to children and adolescents, we hope to decrease the need of urgent dental care by 10% in DY5. This will also reduce cost of care, as urgent visits require more costly treatments and procedures.

Matagorda Regional Medical Center
Pass 1
**Title of Outcome Measure (Improvement Target):** IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate

**Unique RHP outcome identification number(s):** 130959304.3.1

**Performing Provider Name/TPI:** Matagorda Regional Medical Center/130959304

**Outcome Measure Description:**
IT-2.11 will be defined as the number of acute care hospitalizations for ambulatory care sensitive conditions (grand mal status and other epileptic convulsions, chronic pulmonary diseases (COPD), asthma, heart failure and, pulmonary edema, hypertension, angina and diabetes) for patients in defined population 75 years of age and under.

**Process Milestones:**
- DY2: P-1; P-2; P-3
- DY3: P-2; P-3; P-4
- DY4: P-4; P-5
- DY5: P-4; P-5

**Outcome Improvement Target(s) for each year:**
- **DY4:**
  - IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate
  - Reduce admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 5% from DY2 base for those patients of the chronic disease specialty clinic.

- **DY5:**
  - IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate
  - Reduce admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 10% from DY2 base for those patients of the chronic clinic.

**Rationale:**
The analysis of admissions into the system for acute chronic conditions, the prevalence of chronic disease in the specified population, as well as the rate of uncontrolled chronic conditions is the baseline for the establishment of a chronic disease specialty clinic. To establish chronic clinic, key process milestones of project planning (P-1), confirmation of disease rates, admission rates and subsequently the measurement of the performance of the chronic clinic (P-2)(P-3) will be accomplished. Process Milestones P-1, P-2, P-3 will all be completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles (P-4) will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 (P-5) as they are experienced.

Although slight improvement in controlling chronic diseases as well as reducing Ambulatory Care Sensitive Conditions Admissions is expected in Year 3, improvements
in this health disparity is expected to be measurable in years 4 and 5. The original study documented a 30% reduction in admissions rate over a 6 year period\(^1\) and supports the expectation of a 5% and 10% in DY4 and 5 respectively.

**Outcome Measure Valuation:**
The direct dollar association with achieving the outcomes of this project is mainly in the arena of cost avoidance. For each acute admission reduction for disease related issues, we estimate a savings of approximately $15,000 - $20,000 including the associated reduction in disease crises oriented emergency department visits. Therefore, by reducing 1 admission on 50% of the active clinic patients described as a process milestone, it is possible to avoid as much as $1,000,000 of unnecessary hospital related costs.

Matagorda Regional Medical Center
Pass 2
Title of Outcome Measure (Improvement Target): IT – 9.2 ED appropriate utilization

Unique RHP outcome identification number(s): 130959304 3.2/Pass 2
Performing Provider Name/TPI: Matagorda Regional Medical Center/130959304

Outcome Measure Description:
- Reduce all ED visits (including ACSC)\(^1\)
- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)\(^2\)
- Reduce Emergency Department visits for target conditions
  - Congestive Heart Failure
  - Diabetes
  - End Stage Renal Disease
  - Cardiovascular Disease /Hypertension
  - Behavioral Health/Substance Abuse
  - Chronic Obstructive Pulmonary Disease
  - Asthma

Process Milestones:
- DY2: P-1; P-2; P-3
- DY3: P-2; P-3; P-4
- DY4: P-4; P-5
- DY5: P-4; P-5

Outcome Improvement Target(s) for each year:
- **DY4:**
  - IT-9.2 ED appropriate utilization
    - Reduce all ED visits (including ACSC)\(^3\)
    - Reduce pediatric Emergency Department visits (CHIPRA Core Measure)\(^4\)
    - Reduce Emergency Department visits for target conditions
      - Congestive Heart Failure
      - Diabetes
      - End Stage Renal Disease
      - Cardiovascular Disease /Hypertension
      - Behavioral Health/Substance Abuse
      - Chronic Obstructive Pulmonary Disease
      - Asthma

- **DY5:**
  - IT-9.2 ED appropriate utilization

\(^1\)http://archive.ahrq.gov/data/safetynet/billappb.htm
\(^3\)http://archive.ahrq.gov/data/safetynet/billappb.htm
• Reduce all ED visits (including ACSC)\(^5\)
• Reduce pediatric Emergency Department visits (CHIPRA Core Measure)\(^6\)
• Reduce Emergency Department visits for target conditions
  ▪ Congestive Heart Failure
  ▪ Diabetes
  ▪ End Stage Renal Disease
  ▪ Cardiovascular Disease /Hypertension
  ▪ Behavioral Health/Substance Abuse
  ▪ Chronic Obstructive Pulmonary Disease
  ▪ Asthma

**Rationale:**
The analysis of visits to the hospital emergency department led to the rationale for establishing a patient care navigation program to reduce unnecessary utilization of one of the more expense pieces of the health care continuum. To establish the patient care navigation program we chose key process milestones of project planning, confirmation of utilization statistics, patient needs and available community resources. Process Milestones will all be completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 as they are experienced to allow for improvement and/or intervention as needed.

**Outcome Measure Valuation:**
Matagorda Regional Medical Center has approximately 20,000 visits to the Emergency Department annually. Records reflect a potential of 40 – 50%\(^7\) of the visits could have been treated in another venue. If the Patient Care Navigator Program is successful at reducing unnecessary ED visits by a conservative 10%, a savings of as much as $2,000,000\(^8\) could be realized by the end of the project period (as compared to a standard physician office visit).

      - Chronic Obstructive Pulmonary Disease
      - Asthma

\(^1\)http://archive.ahrq.gov/data/safetynet/billappb.htm
\(^3\)http://archive.ahrq.gov/data/safetynet/billappb.htm
• **DY5:**
  - IT-9.2 ED appropriate utilization
    - Reduce all ED visits (including ACSC)\(^5\)
    - Reduce pediatric Emergency Department visits (CHIPRA Core Measure)\(^6\)
    - Reduce Emergency Department visits for target conditions
      - Congestive Heart Failure
      - Diabetes
      - End Stage Renal Disease
      - Cardiovascular Disease /Hypertension
      - Behavioral Health/Substance Abuse
      - Chronic Obstructive Pulmonary Disease
      - Asthma

**Rationale:**
The analysis of visits to the hospital emergency department indicates unnecessary utilization of one of the most expensive pieces of the health care continuum, the ED. To provide an alternative to care at the right time and right setting primary and urgent care services will be expanded to evenings and weekends. A nurse advice call line manned with RN professionals trained in pediatric as well as adult triage will promote the use of the expanded primary and urgent care services. Key process milestones of project planning, identification of capacity utilization statistics from inception to Year 3, identification of patient needs, matching patient needs to resources and testing data systems and processes will be evaluated and completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 as they are experienced to allow for improvement and/or intervention as needed.

**Outcome Measure Valuation:**
Matagorda Regional Medical Center has approximately 20,000 visits to the Emergency Department annually. Records reflect a potential of 40 – 50%\(^7\) of the visits could have been treated in another venue. If the expanded primary care and urgent care and the nurse advise line is successful at reducing unnecessary ED visits by a conservative 15%, a savings of as much as $3,000,000\(^8\) could be realized by the end of the project period (as compared to a standard physician office visit).

Memorial Hermann Hospital

Pass 1
**Title of Outcome Measure (Improvement Target):** IT-1.10 Diabetes care: HBA1c poor control (>9.0%)

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.1

**Outcome Measure Description:**
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve the management of the diabetes population by 3% on the HBA1c scale. In DY 5, Memorial Hermann intends to improve the management of the diabetes population by 5% on the HBA1c scale.

**Process Milestones:**
- **DY2:**
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- **DY3:**
  - P-2: Establish baseline rates

**Outcome Improvement Targets for each year:**
- **DY4:**
  - IT-1.10 Increase % of patients with A1c <9% over baseline by 3%
- **DY5:**
  - IT-1.10 Increase % of patients with A1c <9% over baseline by 5%

**Rationale:**
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which results in poor management of chronic conditions that are prevalent in the population like diabetes. This challenge will be addressed by Memorial’s Network Development project (137805107.1.1), and In the Agency for Healthcare Research and Quality’s 2011 report, Texas ranks last in the nation on health care quality. In the same report, Texas scored particularly weak on diabetes care. Process milestones 1 & 2 were chosen to take our current patient population and calculate a baseline rate of % of patients with diabetes that have an A1C <9%.

This is a relevant outcome measure for project 1.1.1 for physician network development because by adding incremental primary care providers, we will care for more of our RHP patient population and yet have a mechanism in place to monitor and improve their diabetes control through focused follow up care by our primary care physicians. Improvement target is the measure itself and we want to grow the % < 9% which indicates the patient’s diabetes is in control.

**Outcome Measure Valuation:**
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of
patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Focus on successful management resulting in reduced # of patients with A1c > 9 improves the patient health status, reduces costs and avoids admissions, thus creating greater access for the RHP 3 underserved patient population.

**Title of Outcome Measure (Improvement Target):** IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.2

**Outcome Measure Description:**
To achieve improvement under this metric, Memorial will engage in project planning during DY 2. In DY 3, Memorial will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY 3. In DY 5, Memorial intends to improve its BH/SA 30-day readmission rate by at least 10% over baseline measurement.

**Process Milestones:**
- **DY2:**
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- **DY3:**
  - P-2: Establish baseline rates

**Outcome Improvement Targets for each year:**
- **DY4:**
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over DY3
- **DY5:**
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over baseline measurement

**Rationale:**
Mental health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the mental health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial’s Health Crisis Clinic project (137805107.1.2), which will result in greater access to emergency mental health care appointments for these underserved patients. Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 project.

**Outcome Measure Valuation:**
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.3

**Outcome Measure Description:**
IT-1.1 Third next available appointment (Non-standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days.

DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to one day.

**Rationale:**
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment, patients are more likely to get these services when they are able to get appointments when first needed that accommodates their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,537,115
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Performing Provider Name/TPI: Memorial Hermann Hospital/137805107

Unique RHP outcome identification number(s): 137805107.3.4

Outcome Measure Description:
IT-1.20 Asthma Control in Pediatric Patients Using the Asthma Therapy Assessment Questionnaire (ATAQ) (Standalone)
Increase the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months as measured by the Asthma Therapy Assessment Questionnaire (ATAQ). The ATAQ was found to have “good internal consistency and strong relationships with existing validated measures of childhood health status, asthma impact, and health care utilization.” The score range on the 7-item ATAQ is 0-7, with 0 showing complete control and each score of 1 thereafter indicating an area in need of improved management. The ATAQ will be administered at each patient visit for patients with a diagnosis of asthma. Improvement is defined as a downward trend in the total score of the 7-items on the ATAQ for each individual patient.

Process Milestones:
DY2:
P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-2: Establish baseline rates
P-3: Develop and test data systems

Outcome Improvement Targets for each year:
DY4:
IT-1.20: Increase by 3% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.
DY5:
IT-1.20: Increase by 5% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.

4 Ibid.
**Rationale:**

Asthma is one of the most common chronic illnesses among children in the U.S.\(^5\) The National Health Interview Survey (2011) found that 14% of all children living in the U.S., 21% of non-Hispanic black children, and 18% of children in poor families had ever been diagnosed with asthma.\(^6\) The number of children residing in the defined service area for this clinic is estimated at over 35,000, with 35% of those being non-Hispanic black (over 12,250) and 49% living below the federal poverty level (over 15,000). (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.)

By extrapolating the U.S. statistics on children with asthma to the service area for this clinic, we can conservatively estimate that there are at least 2,700 children in this area suffering from asthma. Since the service area for this clinic has a high proportion of children living below the federal poverty level and a high proportion of non-Hispanic black children, achieving better asthma control for these patients will be an important and worthy outcome measure of increasing access to primary care services.

After the assessment of severity for the initial diagnosis, the goal then becomes asthma control, demonstrated through symptom manifestation and disease activity. The use of the ATAQ itself has benefits beyond simple measurement—it is a tool to ensure regular assessment and the consistent questioning can teach children and/or their parents which symptoms and experiences should be anticipated for managing their asthma.\(^7\)

**Outcome Measure Valuation:**

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,537,115
**Title of Outcome Measure (Improvement Target):** OD-9 Right Care, Right Setting

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.5

**Outcome Measure Description:**
IT-9.3 Pediatric/Young Adult Asthma Emergency Department Visits (Standalone measure)
Numerator: Percentage of clinic patients with asthma who have greater than or equal to one visit to the emergency room for asthma during the measurement period. Denominator: Denominator is all clinic patients age two through age 18, diagnosed with asthma during the measurement period. The denominator will include recipients with claims with asthma as primary or secondary diagnoses with the dates of service being within the measurement period.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-9.3 Reduce by 3% the percentage of Emergency Department (ED) visits for asthma in the target population.
DY5:
IT-9.3 Reduce by 5% the percentage of Emergency Department visits for asthma in the target population.

**Rationale:**
Asthma is one of the most common chronic illnesses among children in the U.S.\(^8\) Access to primary care services will have an impact on healthcare outcomes by providing early screening and treatment. The goal of the project is to increase access to primary care, thereby making sure patients get the right care at the right setting at the right time. Appropriate primary care has the potential to prevent the acute worsening of the chronic illnesses such as asthma, thereby decreasing the need for emergency care. Hence ED visits for asthma will be a good outcome measure for this project.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the

**Year 2 Estimated Outcome Amount:** $160,712

**Year 3 Estimated Outcome Amount:** $186,287

**Year 4 Estimated Outcome Amount:** $298,925

**Year 5 Estimated Outcome Amount:** $714,820

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,360,743
**Title of Outcome Measure (Improvement Target):** OD-9 Right Care, Right Setting

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.8

**Outcome Measure Description:**
IT-9.3 Pediatric/Young Adult Asthma Emergency Department Visits (Standalone measure)
Numerator: Percentage of clinic patients with asthma who have greater than or equal to one visit to the emergency room for asthma during the measurement period. Denominator: Denominator is all clinic patients age two through age 18, diagnosed with asthma during the measurement period. The denominator will include recipients with claims with asthma as primary or secondary diagnoses with the dates of service being within the measurement period.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-9.3 Reduce by 3% the percentage of Emergency Department (ED) visits for asthma in the target population.
DY5:
IT-9.3 Reduce by 5% the percentage of Emergency Department visits for asthma in the target population.

**Rationale:**
Asthma is one of the most common chronic illnesses among children in the U.S.\(^\text{16}\) Access to primary care services will have an impact on healthcare outcomes by providing early screening and treatment. The goal of the project is to increase access to primary care, thereby making sure patients get the right care at the right setting at the right time. Appropriate primary care has the potential to prevent the acute worsening of the chronic illnesses such as asthma, thereby

decreasing the need for emergency care. Hence ED visits for asthma will be a good outcome measure for this project.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.9

**Outcome Measure Description:**
IT-1.1 Third next available appointment (Non-standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days.
DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to one day.

**Rationale:**
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment, patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,360,743
**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Performing Provider:** Memorial Hermann Hospital/TPI 137805107

**Unique RHP outcome identification number(s):** 137805107.3.10

**Outcome Measure Description:**
IT-1.20 Asthma Control in Pediatric Patients Using the Asthma Therapy Assessment Questionnaire (ATAQ) (Standalone)
Increase the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months as measured by the Asthma Therapy Assessment Questionnaire (ATAQ).\(^{17,18,19}\) The ATAQ was found to have “good internal consistency and strong relationships with existing validated measures of childhood health status, asthma impact, and health care utilization.”\(^{20}\) The score range on the 7-item ATAQ is 0-7, with 0 showing complete control and each score of 1 thereafter indicating an area in need of improved management. The ATAQ will be administered at each patient visit for patients with a diagnosis of asthma. Improvement is defined as a downward trend in the total score of the 7-items on the ATAQ for each individual patient.

**Process Milestones:**
DY2:
P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-2: Establish baseline rates
P-3: Develop and test data systems

**Outcome Improvement Targets for each year:**
DY4:
IT-1.20: Increase by 3% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.

DY5:
IT-1.20: Increase by 5% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.

\(^{19}\) Barbara P. Yawn, Susan K. Brenneman, Felicia C. Allen-Ramey, Michael D. Cabana and Leona E. Markson. Assessment of Asthma Severity and Asthma Control in Children. Pediatrics 2006;118;322

\(^{20}\) Ibid.
**Rationale:**
Asthma is one of the most common chronic illnesses among children in the U.S.\(^{21}\) The National Health Interview Survey (2011) found that 14% of all children living in the U.S., 21% of non-Hispanic black children, and 18% of children in poor families had ever been diagnosed with asthma.\(^{22}\) The number of children residing in the defined service area for this clinic is estimated at over 35,000, with 35% of those being non-Hispanic black (over 12,250) and 49% living below the federal poverty level (over 15,000). (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) By extrapolating the U.S. statistics on children with asthma to the service area for this clinic, we can conservatively estimate that there are at least 2,700 children in this area suffering from asthma. Since the service area for this clinic has a high proportion of children living below the federal poverty level and a high proportion of non-Hispanic black children, achieving better asthma control for these patients will be an important and worthy outcome measure of increasing access to primary care services.

After the assessment of severity for the initial diagnosis, the goal then becomes asthma control, demonstrated through symptom manifestation and disease activity. The use of the ATAQ itself has benefits beyond simple measurement—it is a tool to ensure regular assessment and the consistent questioning can teach children and/or their parents which symptoms and experiences should be anticipated for managing their asthma.\(^{23}\)

**Outcome Measure Valuation:**
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,360,743
Title of Outcome Measure (Improvement Target): IT-9.4: Other Outcome Improvement Target

Performing Provider: Memorial Hermann Hospital/TPI 137805107

Unique RHP outcome identification number(s): 137805107.3.12

Outcome Measure Description:
To achieve improvement under this metric, Memorial will engage in project planning during DY2. In DY3, Memorial will apply the planning developed in DY2 to determine baseline rates for future DYs. In DY4, Memorial intends to decrease the ED utilization rate described below by at least 5% under the baseline recorded in DY3. In DY5, Memorial intends to improve the rate by at least 10% under the baseline recorded in DY3.

Memorial will collect ED utilization data for patients enrolled in the patient navigation program which will be established by the Category 2 project associated with this Category 3 outcome. Memorial will collect this data by comparing the number of Memorial Hermann Health System ER visits in the six months prior to an individual’s enrollment in the patient navigation program with the number of Memorial Hermann Health System ER visits in the six months following the same individual’s enrollment.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates.

Outcome Improvement Targets for each year:
- DY4:
  - IT-9.4: Other Outcome Improvement Target—reduce Memorial Hermann ED visits in 6 months after enrollment in patient navigation program by 5% under DY3 baseline.
- DY5:
  - IT-9.4: Other Outcome Improvement Target—reduce Memorial Hermann ED visits in 6 months after enrollment in patient navigation program by 10% under DY3 baseline.

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Memorial’s COPE/ED Navigation project (137805107.2.2) will provide patient navigation and offer alternatives to ED utilization for patients who may not be truly emergent. Memorial expects to see an improvement in ED utilization as a result of the associated Category 2 project.
**Outcome Measure Valuation:**
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Title of Outcome Measure (Improvement Target): IT-13.3: Proportion with More Than One Emergency Room Visit in the Last Days of Life

Performing Provider: Memorial Hermann Hospital/TPI 137805107

Unique RHP outcome identification number(s): 137805107.3.13

Outcome Measure Description:
To achieve improvement under this metric, Memorial will engage in project planning during DY 2. In DY 3, Memorial will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial intends to improve its proportion of patients who died from cancer with more than one emergency room visit in the last days of life by at least 10% over the baseline recorded in DY 3. In DY 5, Memorial intends to improve the measure by at least 10% over DY 4.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-13.3: Proportion with more than one emergency room visit in the last days of life—5% improvement over baseline
- DY5:
  - IT-13.3: Proportion with more than one emergency room visit in the last days of life—10% improvement over baseline

Rationale:
Due to a lack of access to hospice and palliative care, many patients have no choice but to receive end-of-life care which focuses on cure at any cost, rather than on the relief and prevention of suffering. In the last days of life, these patients often receive emergency treatment that is inconsistent with palliative care principles and without proper regard for the patient’s quality of life. Memorial’s Palliative Clinical Care Program project (137805107.2.2) will accelerate the growth and increase availability of palliative care in the greater Houston area, providing an alternative to ED utilization for patients in the last days of life. Memorial therefore expects to see an improvement in this Category 3 outcome as a result of the successful implementation of the associated Category 1 project.

Outcome Measure Valuation:
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $3,556,758
Memorial Hermann Northwest Hospital
Pass 1
Title of Outcome Measure (Improvement Target): IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020); and IT-1.1 Third next available appointment.

Unique RHP outcome identification number(s): 020834001.3.1

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYS. In DY 4, Memorial Hermann intends to improve the untreated dental caries measurement defined below by at least 15% over the baseline recorded in DY 3 for that measurement. In DY 5, Memorial Hermann intends to improve the same measurement by at least 25% over baseline. Additionally, Memorial Hermann will ensure that patients have convenient access to primary care services by maintaining the third next available appointment be no more than 3 days from a patient’s request 75% of the time.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)—15% improvement over DY3 in recall patients
    - Numerator: Number of children with untreated dental caries seen by the mobile dental van program within the measurement period
    - Denominator: Total number of children that have been seen by the mobile dental van program within the measurement period
  - IT-1.1 Third Next Available Appointment: Average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. Maintain number of days to third next available appointment to no more than three days 75% of the time.
    - Numerator: Average number of days to third next available appointment for an office visit for each clinic.
    - Denominator: Mid-level provider within a reported clinic.
    - Exclusions: weekends
- DY5:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020—25% improvement over baseline
    - Numerator: Number of children with untreated dental caries seen by the mobile dental van program within the measurement period
• Denominator: Total number of children that have been seen by the mobile dental van program within the measurement period
  o IT-1.1 Third Next Available Appointment: Average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. Maintain number of days to third next available appointment to no more than three days 75% of the time.
  • Numerator: Average number of days to third next available appointment for an office visit for each clinic.
  • Denominator: Mid-level provider within a reported clinic.
  • Exclusions: weekends

**Rationale:**
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in care completely foregone until medical and dental issues escalate leading to negative utilization patterns such as ED overutilization. Memorial Hermann’s School-Based Health project (020834001.1.1) will provide alternatives to improper ED utilization and provide the right care in the right setting through consistent delivery of preventive care. Therefore, Memorial Hermann expects to see an improvement in the defined outcome improvement target as a result of the successful implementation of the associated Category 1 project. This specific improvement target has been chosen, in part, because it exemplifies the benefits to be derived from an accessible medical and dental home. Additionally, Memorial Hermann will sample the mid-level providers (MLP) the same day of the week, once a week. Count the number of days between a request for an appointment (enter a dummy patient) with an MLP and the third next available appointment for a new patient physical, routine exam, or return visit exam. Report the average number of days for all MLPs sampled. The data collection can be done manually or electronically. This will be done to maintain number of days to third next available appointment to no more than three days 75% of the time.

**Outcome Measure Valuation:**
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**Year 5 Estimated Outcome Amount:** $1,797,721

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $3,422,172
**Title of Outcome Measure (Improvement Target):** IT-9.2: ED appropriate utilization

**Performing Provider:** Memorial Hermann Hospital System/TPI 020834001

**Unique RHP outcome identification number(s):** 020834001.3.2

**Outcome Measure Description:**
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. Over the program period, Memorial Hermann will achieve a 25% reduction in ER visits from the individuals who call the Nurse Triage Line who would have used the ER inappropriately. Callers who were identified by Nurses as non-emergent will be surveyed by telephone within 7 days of their call to assess patient compliance with staff recommendations, the patient’s actual healthcare actions, and their satisfaction with the service. The program’s Community Health Workers (CHWs) or Navigators will make the follow-up calls as part of their navigation work to assist patients in making clinic connections and to link patients with other community resources as needed.

**Process Milestones:**
- **DY2:**
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- **DY3:**
  - P-2: Establish baseline rates

**Outcome Improvement Targets for each year:**
- **DY4:**
  - IT-9.2: ED appropriate utilization – 15% of nurse triage calls will be ER diverted over the baseline measured in DY 2
    - Numerator:
      - Number of Nurse Triage Calls resulting in ED avoidance over a 12 month period
    - Denominator:
      - Number of Nurse Triage Calls received in a 12 month period.
- **DY5:**
  - IT-9.2: ED appropriate utilization – 25% of nurse triage calls will be ER diverted over the baseline measured in DY 2
    - Numerator:
      - Number of Nurse Triage Calls resulting in ED avoidance over a 12 month period
    - Denominator:
      - Number of Nurse Triage Calls received in a 12 month period.

**Rationale:**
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization.
Memorial Hermann’s 24-Hour Nurse Triage Line project (020834001.1.2) will provide an alternative to ED utilization for patients who may not be truly emergent; therefore, Memorial Hermann expects to see an improvement in ED utilization as a result of the associated Category 1 project. Percentage improvement is based on volume of calls which are anticipated to increase in the fourth year (from baseline) and the fifth year of the project.

**Outcome Measure Valuation:**
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $3,461,964
Title of Outcome Measure (Improvement Target): IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

Unique RHP outcome identification number(s): 020834001.3.3

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY 3. In DY 5, Memorial Hermann intends to improve its BH/SA 30-day readmission rate by at least 5% over the DY 4 measurement.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over DY3
- DY5:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over the baseline measures in DY3

Rationale:
Behavioral health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the behavioral health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial Hermann’s Psych Response Team—Case Management project (020834001.2.1), which will result in more intensive case management of post-discharge behavioral health patients and more appropriate follow-up and utilization of care by these patients. That care will be provided in a community setting, in part, through Memorial Hermann’s efforts to implement a Home Health Psych Services project (020834001.1.3). Therefore, Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 and 2 projects.

Current national data available indicates patients with a mental health diagnosis hospitalized in a given year will seek readmission within the same year 10% more than the general population (Smeltzer, 2009). Data collected from Memorial Hermann’s facilities indicate 35% of psychiatric care is delivered without comprehensive behavioral health services available to the
patient. Providing mental health services in the home setting will increase access to mental health services delivered in an appropriate setting and decrease the readmission of these patients.

**Project Valuation:**

The valuation of Memorial Hermann’s projects use a method which ranks the importance of each projects based several key factors. First, Memorial Hermann considered the extent the project helps further the goals of the Waiver, which are to (a) enhance access to health care, (b) increase the quality of care, and (c) improve the cost-effectiveness of care provided in the community. Next, Memorial Hermann considered the degree of need for the project in the community as addressed and identified in the Community Needs Assessment. The size of the required investment was also considered, which included considerations of personnel, equipment, time and complexity as well as the cost of the time, effort, and clinical resources involved in implementing the project. Finally, Memorial Hermann reflected on the scope of the project: the number of patients that would be affected, including the type of patients; the number of patient visits or encounters; how many providers or staff members would be added; the costs that would be avoided as a result of the project; and the ripple effect the project would have on all members of the healthcare system. These factors were weighed against the amount of funding available. We believe this approach is the best methodology available to assess the impact of the project, the investment of the performing provider and the overall value to the community to the extent community resources are available to help fund DSRIP projects. Final project valuation and funding distribution across categories was then determined based on the valuation provisions in the Program Funding and Mechanics Protocol.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $4,098,647
**Title of Outcome Measure (Improvement Target):** ITIT-1.10 Diabetes care: HBA1c poor control (>9.0%)

**Performing Provider:** Memorial Hermann Hospital System/TPI 020834001

**Unique RHP outcome identification number(s):** 020834001.3.4

**Outcome Measure Description:**
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve the management of the diabetes population by 3% on the HBA1c scale. In DY 5, Memorial Hermann intends to improve the management of the diabetes population by 5% on the HBA1c scale.

**Process Milestones:**
- **DY2:**
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- **DY3:**
  - P-2: Establish baseline rates

**Outcome Improvement Targets for each year:**
- **DY4:**
  - IT-1.10 Increase % of patients with A1c <9% over baseline by 3%
  - DY5: IT-1.10 Increase % of patients with A1c <9% over baseline by 5%  

**Rationale:**
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which results in poor management of chronic conditions that are prevalent in the population like diabetes. This challenge will be addressed by Memorial Hermann’s Convenient Care Centers project (020834001.1.4), and in the Agency for Healthcare Research and Quality’s 2011 report, Texas ranks last in the nation on health care quality. In the same report, Texas scored particularly weak on diabetes care. Process milestones 1 & 2 were chosen to take our current patient population and calculate a baseline rate of % of patients with diabetes that have an A1C <9%.

This is a relevant outcome measure for project 1.1.2 for Convenient Care Centers because by adding incremental primary care sites, we will care for more of our RHP patient population and yet have a mechanism in place to monitor and improve their diabetes control through focused follow up care by our primary care physicians. Improvement target is the measure itself and we want to grow the % < 9% which indicates the patient’s diabetes is in control.

**Outcome Measure Valuation:**
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs...
avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Focus on successful management resulting in reduced # of patients with A1c > 9 improves the patient health status, reduces costs and avoids admissions, thus creating greater access for the RHP 3 underserved patient population.

</tbody>
</table>

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $4,138,440
**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Performing Provider Name/TPI:** Memorial Hermann Hospital System/020834001

**Unique RHP outcome identification number(s):** 020834001.3.5

**Outcome Measure Description:**
IT-1.1 Third next available appointment (Non-standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days.
DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to one day.

**Rationale:**
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment, patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration
year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $ 1,498,391
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Performing Provider Name/TPI: Memorial Hermann Hospital System/ 020834001

Unique RHP outcome identification number(s): 020834001.3.6

Outcome Measure Description:
IT-1.20 Asthma Control in Pediatric Patients Using the Asthma Therapy Assessment Questionnaire (ATAQ) (Standalone)
Increase the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months as measured by the Asthma Therapy Assessment Questionnaire (ATAQ).¹²³ The ATAQ was found to have “good internal consistency and strong relationships with existing validated measures of childhood health status, asthma impact, and health care utilization.”⁴ The score range on the 7-item ATAQ is 0-7, with 0 showing complete control and each score of 1 thereafter indicating an area in need of improved management. The ATAQ will be administered at each patient visit for patients with a diagnosis of asthma. Improvement is defined as a downward trend in the total score of the 7-items on the ATAQ for each individual patient.

Process Milestones:
DY2:
P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-2: Establish baseline rates
P-3: Develop and test data systems

Outcome Improvement Targets for each year:
DY4:
IT-1.20: Increase by 3% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.
DY5:
IT-1.20: Increase by 5% over baseline the percent of members (ages 5-17) diagnosed with asthma that showed improvement in asthma control over the previous 12 months.

⁴ Ibid.
Rationale:
Asthma is one of the most common chronic illnesses among children in the U.S. The National Health Interview Survey (2011) found that 14% of all children living in the U.S., 21% of non-Hispanic black children, and 18% of children in poor families had ever been diagnosed with asthma. The number of children residing in the defined service area for this clinic is estimated at over 35,000, with 35% of those being non-Hispanic black (over 12,250) and 49% living below the federal poverty level (over 15,000). (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) By extrapolating the U.S. statistics on children with asthma to the service area for this clinic, we can conservatively estimate that there are at least 2,700 children in this area suffering from asthma. Since the service area for this clinic has a high proportion of children living below the federal poverty level and a high proportion of non-Hispanic black children, achieving better asthma control for these patients will be an important and worthy outcome measure of increasing access to primary care services.

After the assessment of severity for the initial diagnosis, the goal then becomes asthma control, demonstrated through symptom manifestation and disease activity. The use of the ATAQ itself has benefits beyond simple measurement—it is a tool to ensure regular assessment and the consistent questioning can teach children and/or their parents which symptoms and experiences should be anticipated for managing their asthma.

Outcome Measure Valuation:
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Title of Outcome Measure (Improvement Target): OD-9 Right Care, Right Setting

Performing Provider Name/TPI: Memorial Hermann Hospital System/ 020834001

Unique RHP outcome identification number(s): 020834001.3.7

Outcome Measure Description:
IT-9.3 Pediatric/Young Adult Asthma Emergency Department Visits (Standalone measure)
Numerator: Percentage of clinic patients with asthma who have greater than or equal to one visit to the emergency room for asthma during the measurement period. Denominator: Denominator is all clinic patients age two through age 18, diagnosed with asthma during the measurement period. The denominator will include recipients with claims with asthma as primary or secondary diagnoses with the dates of service being within the measurement period.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-9.3 Reduce by 3% the percentage of Emergency Department (ED) visits for asthma in the target population.
DY5:
IT-9.3 Reduce by 5% the percentage of Emergency Department visits for asthma in the target population.

Rationale:
Asthma is one of the most common chronic illnesses among children in the U.S. Access to primary care services will have an impact on healthcare outcomes by providing early screening and treatment. The goal of the project is to increase access to primary care, thereby making sure patients get the right care at the right setting at the right time. Appropriate primary care has the potential to prevent the acute worsening of the chronic illnesses such as asthma, thereby decreasing the need for emergency care. Hence ED visits for asthma will be a good outcome measure for this project.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the

---

amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,498,390
Title of Outcome Measure (Improvement Target): IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

Performing Provider: Memorial Hermann Hospital System/TPI 020834001

Unique RHP outcome identification number(s): 020834001.3.8

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY2. In DY3, Memorial Hermann will apply the planning developed in DY2 in order to determine baseline rates for future DYs. In DY4, Memorial Hermann intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY3. In DY5, Memorial Hermann intends to improve its BH/SA 30-day readmission rate by at least 10% over the baseline recorded in DY3.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over baseline recorded in DY3
- DY5:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over baseline recorded in DY3

Rationale:
Behavioral health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the behavioral health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial Hermann’s Psych Response Team—Case Management project (020834001.2.1), which will result in more intensive case management of post-discharge behavioral health patients and more appropriate follow-up and utilization of care by these patients. That care will be provided in a community setting, in part, through Memorial Hermann’s efforts to implement a Home Health Psych Services project (020834001.1.1). Therefore, Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 and 2 projects.

Since 2007, the emergent psych patients seeking services at Memorial Hermann Health System acute care facilities increased annually by ~ 5% over the preceding year. Current national data available indicates patients with a mental health diagnosis hospitalized in a given year will seek readmission within the same year 10% more than the general population (Smeltzer, 2009).
Memorial Hermann Health System psych data indicates inpatient care is initiated for 35% of total psych volumes that do not have post discharge case management services available. (Memorial Hermann Health System Psych Volumes FY 12: 6924 patient encounters, 2423 patients were admitted to psych inpatient treatment). Initial contact with target population will be crucial to impacting patient outcome for reducing readmission rates. Once the program is developed, initial contact in the acute care setting will accomplish follow-up consent post discharge.

**Outcome Measure Valuation:**
The valuation of each Memorial Hermann project takes into account the transformational impact, the population served (both number of people and complexity of patient needs), the alignment with community needs, the magnitude of costs avoided or reduced, the degree of collaboration involved, and the sustainability of the project.

A national current practice review indicates post discharge follow-up decreases future inappropriate ER utilization in a range of 25%-60%. Translating these statistics with the most conservative approach is an outcome measure that would greatly impact inappropriate utilization of Memorial Hermann Health System ERs.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent Improvement Over Baseline of Patient Satisfaction Scores

Performing Provider: Memorial Hermann Hospital System/TPI 020834001

Unique RHP outcome identification number(s): 020834001.3.9

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY2. In DY3, Memorial Hermann will apply the planning developed in DY2 to determine baseline rates for future DYs. In DY4, Memorial Hermann intends to improve its patient satisfaction scores over the baseline recorded in DY3 by using patients’ rating of whether they are getting timely care, appointments, and information. Targets for patient satisfaction scores will be gauged against emerging best practice standards and industry comparatives.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates.

Outcome Improvement Targets for each year:
- DY4:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—improvement over DY3 for patients’ rating of whether patients are getting timely care, appointments, and information.
- DY5:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—improvement over baseline for patients’ rating of whether patients are getting timely care, appointments, and information.

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Improper utilization results in lower levels of patient satisfaction, since it is not the level or type of care most appropriate to the patient’s condition. Additionally, patients are often unaware of the utilization options that are available to them, or are otherwise not properly equipped to choose the best utilization options. These challenges will be addressed by Memorial Hermann’s Convenient Care Centers project and MHMD Care Management project, and Memorial Hermann expects to see an improvement in patient satisfaction as a result of the associated Category 1 and 2 projects—specifically, an improvement in patients’ rating of whether they are getting timely care, appointments, and information.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs
avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $4,098,647
Memorial Medical Center
Pass 1
Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction

Performing Provider/TPI: Memorial Medical Center/137909111
Unique RHP outcome identification number: 137909111.3.1

Project Description:
To increase the ability of Memorial Medical Center (MMC) to provide the “right care at the right time in the right setting,” patient satisfaction with primary and specialty care services through the establishment of a hospital-based clinic shall be essential. This “expanding access to care” initiative will provide critically needed services to a medically underserved area of rural Texas as identified in our Region’s community needs assessment. However, ensuring patients have access to services at times that are convenient for them, are able to secure appointments with appropriate providers, (therefore reducing the inappropriate use of the hospital emergency department for non-urgent and primary care service) are critical elements to producing life saving, as well as, cost saving measures.

Outcome Measure Description:
To progressively measure and implement appropriate changes, specific steps and milestones are integrated into Memorial Medical’s Center Access to Care four year plan. Following is synopsis of the selected milestones and associated metrics.

During DY2, when the infrastructure for a Hospital Based Clinic is under development, MMC shall assemble a team with Quality Assurance Council to review CG-CAHPS required data on patient experience. After review, the team shall meet with a vendor to develop a customized survey tool to measure and monitor patient outcomes. Open ended questions shall be developed on the survey to all patients to elaborate on their experiences and give insight on how those experiences may be improved. This process milestone is valued at $62,718 for staffing, design development, implementation and monitoring.

For demonstration year 3, we will establish the baseline rates for CG-CAHPS focused areas including timely care, appointments and information. Milestone 2 includes collecting the data from CG-CAHPS surveys and aligning our baseline of achievements or shortcomings to the national average, as well as, personal standards for MMC. We value milestone two at $22,698 for staffing, analysis, and monitoring. Milestone 3 launches a critical step to any successful program, disseminate findings and establish lessons learned and best practices with stakeholders. Utilizing our RHP resources, Quality Assurance Council and other identified stakeholder (i.e. office staff, Physicians, IT, etc.) scores will be aligned with procedures and protocols to develop best practices for positive patient outcomes. Data and feedback are ineffective unless studied, analyzed developed into strategic plans. Because of the importance of this milestone, we value this component at $50,000 for staffing, analysis, oversight and plan development.

In DY4, MMC shall incorporate the milestones in DY3 to produce targeted improvement outcomes in this project year. Target outcome one encompasses a 5% improvement over baseline patient satisfaction scores established in DY3. Focus areas include timely care, appointments and information where goals in patient experiences fell below acceptable standards. Based upon survey results, employee training shall be developed integrating patient experience into the curriculum. Stakeholders and RHP collaborations shall be encouraged to utilize successful models. Further, a case manager/educator shall be placed to assist in...
information and education for patients. We value this milestone at $116,655 including staffing, analyzing, customized curriculum, supplies, training, and monitoring.

Finally, in DY5, patient experience at the Hospital Based Clinic shall have improved in deficient areas of timely care, appointments and information by 10% by the end of the waiver. Further, 80% of staff in areas identified with deficiencies in patient satisfaction shall be trained using customized models for positive patient outcomes. Patient education and case management shall extend based upon customer needs. We value this DSRIP milestone at $278,957 including staffing, analyzing, customized curriculum, supplies, training, public awareness and monitoring.

**Rationale:**
We intend to use the CG-CAHPS survey to improve our performance as measured by whether patients are (1) getting timely care, appointments and information. Obtaining patient feedback on our ability to provide the right care at the right time is critical to the success of this project and the internal operations of the clinic. This data will provide us with meaningful and objective information that will be used to determine whether our clinic has met patient expectations related to obtaining timely care and information, and will identify areas where we need to improve.

Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner, the priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. The CG-CAHPS survey is an effective tool for measuring our progress and will provide valuable information and feedback on our performance and areas where improvement is needed.

Because more than 60% of our community out-migrates for healthcare needs, it is important that patient satisfaction and access to care needs are met locally. Measuring that we are meeting the needs of the patients we intend to serve, represents the best outcome for our project. Through survey results and our participation in a collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Outcome Measure Valuation:**
When valuing the expansion of access to both primary and specialty care in Calhoun County, we looked at the project three-fold. We found such a project had significant economic, quality of life and cost savings value.

First, we surmised the economic value to the County as a whole, the patient, and industry. Roughly 70% of Calhoun County out-migrates for healthcare needs. With that migration to other communities travels revenue from sales tax for meals, gas, shopping and a half day of work. If 10% of the community (2145 citizens) were to utilize healthcare services locally $100,035 in gas and meals alone would remain in the community. Over 20 years, $2,000,700 would be generated from travel. Further, we calculated the revenue lost by patients leaving their jobs for a half day to travel outside the community for healthcare. If 10,000 workers with the average salary of $40,000 took a half day of personal time for doctors appointments outside the area, their absence would generate a loss to industry in the amount of $76,923 in one year and $1,538,461 over 20 years. Further, the revenue generated by local healthcare services would

---

have a significant economic impact on tax valuation. With positive tax revenue, tax rates could be lowered resulting in incentives for business and industry to develop in the area. Job creation, housing expansion and development of amenities add to the quality of life for Calhoun County residents.

In July 2012, Formosa Plastics Corporation and Calhoun County agreed to a $2 million tax abatement for future plant expansions. Recognizing the need for access to healthcare, Formosa Plastics designated the funds be used for construction of a Hospital Based Clinic. To industry, the need for access to healthcare locally is valued more than $2 million.

Secondly, we subjectively valued the quality of life associated with the convenience of local healthcare. In determining the value, we took into consideration the value of a coordinated home health model for patient outcomes\(^2\), and the value of support groups to patient recovery. Redford Williams, Director, Behavioral Medicine Research Center at Duke noted, "Back in 1992 we published a paper in JAMA that clearly documented this (importance of support), showing that heart patients with a spouse, a confidant or both had a 5-year mortality rate of only 18 percent, compared to only 50 percent in those with neither spouse nor confidant." Having access to care at home, lends to a “social recovery model” with the convenience of family and friends assisting in the support group towards recovery. We estimate the value of a coordinated care model with the added convenience of a “social recovery model” as $25,000 per person. We attribute the value to wages earned by patient, supporting members and shorter recovery periods. If 100 patients experienced the benefits of quality of life per year, the value would be $2,500,000. Over 20 years, the quality of life would be valued at $50,000,000.

In a recent assessment conducted by iVantage, they concluded that Medicare costs per capita dollar by Physician service type were $531 more expensive in urban areas than rural\(^3\). In one year, if 2154 (10% of the County) Medicare patients from Calhoun County received their Physician services locally rather than urban areas, Medicare would save $1,139,207. Over the course of twenty years, Medicare would save $22,784,148 in Physician services.

In closing, the access to primary and specialty healthcare through a hospital based clinic is valued at $5,816,165 for year one of the Waiver. For the lifetime of the Waiver 1115, the value of these projects to rural Calhoun County, Texas is valued at $17,264,660.

\(^3\)iVantage, *Rural Relevance Under Healthcare Reform*, April 2012.

Title of Outcome Measure (Improvement Target): IT-9.2 Right Care, Right Setting

Performing Provider/TPI: Memorial Medical Center/137909111
Unique RHP outcome identification number: 137909111.3.5

Project Description:
To increase the ability of Memorial Medical Center (MMC) to provide the “right care at the right time in the right setting,” proper utilization of Emergency Department will be directed with expanded primary and specialty care access through the establishment of a hospital-based clinic. This “expanding access to care” initiative will provide critically needed services to a medically underserved area of rural Texas as identified in our Region’s community needs assessment.

Currently, we have 38% non-emergent visits in our ED annually. This is a priority project for our organization to alleviate the high cost of non-urgent visits. In order to provide preventive and primary care, we must first have the capacity to expand access for patients to these services. With the addition of a hospital-based clinic, we will be able to provide an alternative care setting and avoid more costly ER and inpatient care. Engaging patients in preventive and primary care will also provide care management which yields more healthy outcomes and reduces the cost burden on public payers, which represents 54% of our total payer mix.

Outcome Measure Description:
To progressively measure and implement appropriate changes, specific steps and milestones are integrated into Memorial Medical’s Center Access to Care four year plan. Following is synopsis of the selected milestones and associated metrics.

a. Numerator: The number of individuals admitted to Emergency Department with non-emergent condition before established Hospital Based Clinic.
b. Denominator: The number of individuals admitted to Emergency Department with non-emergent condition after Hospital Based Clinic is operational.

During DY2, when the infrastructure for a Hospital Based Clinic is under development, MMC shall assemble all stakeholders and analyze the utilization of the Emergency Department for non-emergent conditions. ED registration and logs shall be the main source of information for this measure. This process milestone is valued at $31,349 to identify current capacity and needed resources, determine timelines and document implementation plans.

For demonstration year 3, we will establish the baseline. Milestone 2 includes collecting the data from encounters, claims data, ER visit records/logs. We value milestone two at $36,349 for staffing, analysis, and monitoring. Milestone 3 launches a critical step to any successful program, disseminate findings and establish lessons learned and best practices with stakeholders.

In DY4, MMC shall incorporate the milestones in DY3 to produce targeted improvement outcomes in this project year. By redirecting non-emergent cases to the Hospital Based Clinic (which offers extended hours and days of service), we shall see changes to the ED appropriate utilization. The result shall be a reduction in all ED visits (including ACSC). We value this milestone at $58,327 including staffing, analyzing, and cost savings.

Finally, in DY5, with positive patient experience at the Hospital Based Clinic and proper utilization of the Emergency Department, we should experience a decrease in ED use for non-emergent conditions. We value this DSRIP milestone at $139,478 including staffing, analyzing, redirection, and establishing a coordinated care model. In Year 4 we expect to see a 5% reduction over Baseline rates (established in Year 2). In Year 5 we expect to see a 10%
reduction over baseline rates. These reductions would demonstrate incremental progress toward meeting individuals’ needs in settings other than the ED.

**Rationale:**
Our primary goal is to promote more patient-centered care focus on community wellness and enhanced coordination of care. With expanded access to care through a Hospital Based Clinic and a dedication to patient satisfaction, Memorial Medical Center’s project development shall be a multi-year transformational effort as an innovative way to deliver care. By providing the right care at the right time and in the right setting, over time, patients in Calhoun County will hopefully see their overall health improve, rely less on costly ED visits and incur fewer avoidable hospital stays.

The rationale for selecting these process milestones and outcome is to demonstrate if access to healthcare services and appropriate redirection can effectively impact inappropriate ED utilization in a short period of time. One of the main concerns raised in Memorial Medical Center’s assessment is that even when patients have public healthcare coverage (Medicaid, Medicare, or indigent healthcare coverage), these patients still cannot identify a usual source of care other than the ED or will continue to use the ED for potentially preventable and/or non-emergent conditions. We attribute this challenge to the lack of access to primary care physicians.

Appropriate ED utilization is a measure of health needs being met at appropriate levels of care. Some ED visits are necessary. Others occur because of lack of convenient access to other levels of care or exacerbation of illnesses thought to be manageable through high quality ambulatory care. We chose this outcome because we expect increased access to primary care through our Category 1 project to reduce utilization of ED services. Expanded primary care is expected to reduce the need for ED services in this non-emergent group. The presumption is that reduction of all cause admissions will capture reductions in visits for ambulatory care sensitive conditions that may be better handled in the primary care setting and reduction of visits for non-urgent or non-emergent reasons that may also be better-handled in a primary care setting when sufficient access to primary care is available.

Because over 60% of our community out-migrates for healthcare needs, it is important that patient satisfaction and access to care needs are met locally. Lack of access to healthcare has overburdened our Emergency Department to act as a Clinic. The results are delay in care, non-managed follow up care, and high costs. Our participation in a collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Outcome Measure Valuation:**
The creation of the Hospital Based Clinic will create a stronger health focused link to the general public of the county ultimately decreasing the number of inpatient and outpatient visits to the hospital facility and increase the care given by a direct provider. Redirecting to proper utilization of the Emergency Department will lend to cost savings for the patient, community and associated stakeholders.

---

When valuing the expansion of access to both primary and specialty care in Calhoun County, we looked at the project three-fold. We found such a project had significant economic, quality of life and cost savings value.

First, we surmised the economic value to the County as a whole, the patient, and industry. Roughly 70% of Calhoun County out-migrates for healthcare needs. With that migration to other communities travels revenue from sales tax for meals, gas, shopping and a half day of work. If 10% of the community (2145 citizens) were to utilize healthcare services locally $100,035 in gas and meals alone would remain in the community. Over 20 years, $2,000,700 would be generated from travel. Further, we calculated the revenue lost by patients leaving their jobs for a half day to travel outside the community for healthcare. If 10,000 workers with the average salary of $40,000 took a half day of personal time for doctors appointments outside the area, their absence would generate a loss to industry in the amount of $76,923 in one year and $1,538,461 over 20 years. Further, the revenue generated by local healthcare services would have a significant economic impact on tax valuation. With positive tax revenue, tax rates could be lowered resulting in incentives for business and industry to develop in the area. Job creation, housing expansion and development of amenities add to the quality of life for Calhoun County residents.

In July 2012, Formosa Plastics Corporation and Calhoun County agreed to a $2 million tax abatement for future plant expansions. Recognizing the need for access to healthcare, Formosa Plastics designated the funds be used for construction of a Hospital Based Clinic. To industry, the need for access to healthcare locally is valued more than $2 million.

Secondly, we subjectively valued the quality of life associated with the convenience of local healthcare. In determining the value, we took into consideration the value of a coordinated home health model for patient outcomes, and the value of support groups to patient recovery. Redford Williams, Director, Behavioral Medicine Research Center at Duke noted, "Back in 1992 we published a paper in JAMA that clearly documented this (importance of support), showing that heart patients with a spouse, a confidant or both had a 5-year mortality rate of only 18 percent, compared to only 50 percent in those with neither spouse nor confidant." Having access to care at home, lends to a “social recovery model” with the convenience of family and friends assisting in the support group towards recovery. We estimate the value of a coordinated care model with the added convenience of a “social recovery model” as $25,000 per person. We attribute the value to wages earned by patient, supporting members and shorter recovery periods. If 100 patients experienced the benefits of quality of life per year, the value would be $2,500,000. Over 20 years, the quality of life would be valued at $50,000,000.

In a recent assessment conducted by iVantage, they concluded that Medicare costs per capita dollar by Physician service type were $531 more expensive in urban areas than rural. In one year, if 2154 (10% of the County) Medicare patients from Calhoun County received their Physician services locally rather than urban areas, Medicare would save $1,139,207. Over the course of twenty years, Medicare would save $22,784,148 in Physician services.

In closing, the access to primary and specialty healthcare through a hospital based clinic is valued at $5,816,165 for year one of the Waiver. For the lifetime of the Waiver 1115, the value of these projects to rural Calhoun County, Texas is valued at $17,264,660. In addition, the

---

3 iVantage, Rural Relevance Under Healthcare Reform, April 2012.
cost savings for proper utilization of the Emergency Department adds another layer of value as a direct result to having access to healthcare.

Memorial Medical Center
Pass 2
Title of Outcome Measure (Improvement Target): IT-5.1- Improved cost savings: Demonstrate cost savings in care delivery

Performing Provider/TPI: Memorial Medical Center/137909111
Unique RHP outcome identification number: 137909111.3.2

Project Description:
OD-5 Cost of Care – IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery
A Medication Dispensing System will decrease costs through efficiencies gained with automation (labeling, dispensing, tracking, etc.) thus decreasing labor costs. Therefore, we will measure the decreasing average labor cost per prescription as the percentage of total prescriptions processed through automation increases.
   a) We will implement cost accounting systems to measure intervention impacts by monitoring average labor cost per prescription.
   b) We will establish a method to measure cost containment by using the total salaries and benefits (as the numerator) and total number of automated prescriptions filled (as the denominator) as stated on the monthly operating statements.
   c) We will use the current state from the month preceding implementation as our baseline for cost. We currently have no automation.
   d) We will measure cost containment by comparing the project’s average labor cost per prescription and the percentage of automated prescriptions filled to the baseline at yearly intervals.
This cost savings is based on the current volume of 120,000 prescriptions per year.

Outcome Measure Description:
Process Milestones:
DY2: P-2 Establish a baseline rate

Improvement Milestones:
DY3-DY5: IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (stand-alone)

Outcome Improvement Targets:
DY3: Cost savings: 7% decrease in average labor cost per prescription when processing 20% of the total automated prescription volume by the end of the year.
DY4: Cost savings: 19% decrease in average labor cost per prescription over established baseline by processing 90% of the total automated prescription volume.
DY5: Cost savings: 31% decrease in average labor cost per prescription over established baseline by continuing to process 90% of the total automated prescription volume.

Rationale:
Our process milestone P-2 is to establish a baseline cost based on current state before implementation of automated medication dispensing.

Outcome Improvements will be analyzed by the Cost Benefit Analysis comparing the average labor cost per prescription at the goal percentage rates compared to baseline average labor cost per prescription. Considering that there is no current automation at Memorial Medical Center’s Pharmacy for prescription processing, the baseline rate will be the average labor cost per prescription
when 0% of prescriptions are filled with the help of automation. The data source will be the monthly operating statement from the month prior to go-live.

In DY3 cost savings result from a 7% decrease the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY4, cost savings result from a 19% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY5, cost savings result from a 31% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

**Outcome Measure Valuation:** This project is a supporting pillar for one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Calhoun County. The value of the project is based on cost avoidance, projecting savings associated with reducing the costs incurred in filling 120,000 current patient prescriptions on an annual basis. Based on the increase in primary care volumes addressed in another Memorial Medical Center Waiver project, further growth in volume is projected. Despite this increase in prescription volume, processing costs are projected to decrease in total with the addition of a medication dispensing system. The prompt availability of needed prescriptions for our underserved patients, particularly those with chronic disease that can be managed effectively with appropriate pharmaceuticals, will result in fewer emergency room visits, and will also help to prevent future downstream inpatient admissions.

Memorial Medical Center
Pass 3
Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction
Performing Provider/TPI: Memorial Medical Center/137909111
Unique RHP outcome identification number: 137909111.3.3/Pass 3

Outcome Measure Description:
To increase the ability of Memorial Medical Center (MMC) to provide the “right care at the right time in the right setting,” patient satisfaction with primary, specialty care, and hospital services shall be essential. With the “expanding access to care” initiative (137909111.1.1) we will provide critically needed services to a medically underserved area of rural Texas as identified in our Region’s community needs assessment. However, ensuring patients have access to services at times that are convenient for them, are able to secure appointments with appropriate providers, (therefore reducing the inappropriate use of the hospital emergency department for non-urgent and primary care service) are critical elements to producing life saving, as well as, cost saving measures. Having fully trained staff to successfully create a patient friendly coordinated care model is essential.

Since this is a new project for Memorial Medical Center, we will use DY 2 & DY 3 to plan the project and establish baseline rates. In DY 4 & DY 5, we will measure IT-6.1 Percent improvement over baseline of patient satisfaction scores specifically related to the measure IT-6.1.1 Patients are getting timely care, appointments, and information. Currently, a structured patient satisfaction survey does not exist to capture this measure at Memorial Medical Center. Therefore, the baseline will be set at 0. However, we expect to improve this measure by 5% by the end of the waiver.

Rationale:
Memorial Medical Center has selected the process milestones and outcome improvement targets because we are certain if the patient receives timely healthcare and education, they are more likely to continue leading healthy lives and obtaining preventive healthcare on a regular basis which ultimately leads to reduced healthcare costs.

We intend to use the CG-CAHPS survey to improve our performance as measured by whether patients are (1) getting timely care, appointments and information. Obtaining patient feedback on our ability to provide the right care at the right time is critical to the success of this project and the internal operations of the clinic. This data will provide us with meaningful and objective information that will be used to determine whether our clinic has met patient expectations related to obtaining timely care and information, and will identify areas where we need to improve. Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner, the priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. Further, with an educated and confident staff, we anticipate better communication between patients and caregivers resulting in positive outcomes and experiences. The CG-CAHPS survey is an effective tool for measuring our progress and will provide valuable information and feedback on our performance and areas where improvement is needed.

Because over 60% of our community out-migrates for healthcare needs, it is important that patient satisfaction and access to care needs are met locally.\(^1\) Measuring that we are meeting

\(^1\)BR Healthcare Services, Inc., Memorial Medical Center Market & Service Area Development Report, October, 2010.
the needs of the patients we intend to serve, represents the best outcome for our project. Through survey results and our participation in a collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Outcome Measure Valuation:**
We considered both the costs and benefits to our organization and community in order to value the Outcome Measure – IT-6.1 Percent improvement over baseline of patient satisfaction scores. We believe it will take DY2 and DY3 to effectively develop and plan the Outcome Improvement Targets in DY4 and DY5. We do not currently perform or contract with a company to perform surveys for outpatient services, but we intend to select a vendor in DY 2. We believe with the improvement in patient satisfaction scores specifically the improvement target of patients getting timely care, appointments and information, this will decrease unnecessary Emergency Room visits, hospital stays, etc. because patients will be receiving the care and attention they need on a consistent and dependable basis. This Outcome Measure will serve the total outpatient service population of Memorial Medical Center, and it will ultimately assist Port Lavaca and the surrounding communities to live healthier lives and be healthier communities.

When valuing patient satisfaction with healthcare we looked at the project three-fold. We found such a project had significant economic, quality of life and cost savings value.

First, we surmised the economic value to the County as a whole, the patient, and industry. Roughly 70% of Calhoun County out-migrates for healthcare needs. With that migration to other communities travels revenue from sales tax for meals, gas, shopping and a half day of work. If 10% of the community (2145 citizens) were to utilize healthcare services locally $100,035 in gas and meals alone would remain in the community. Over 20 years, $2,000,700 would be generated from travel. Further, we calculated the revenue lost by patients leaving their jobs for a half day to travel outside the community for healthcare. If 10,000 workers with the average salary of $40,000 took a half day of personal time for doctors appointments outside the area, their absence would generate a loss to industry in the amount of $76,923 in one year and $1,538,461 over 20 years. Further, the revenue generated by local healthcare services would have a significant economic impact on tax valuation. With positive tax revenue, tax rates could be lowered resulting in incentives for business and industry to develop in the area. Job creation, housing expansion and development of amenities add to the quality of life for Calhoun County residents. If we improved access to care and patient satisfaction, the need to leave the area for healthcare services would decrease significantly.

In July 2012, Formosa Plastics Corporation and Calhoun County agreed to a $2 million tax abatement for future plant expansions. Recognizing the need for access to healthcare, Formosa Plastics designated the funds be used for construction of a Hospital Based Clinic. To industry, the need for access to healthcare locally is valued more than $2 million. To the worker, the patient experience must be positive to build trust and healthcare relationships in the area.

Secondly, we subjectively valued the quality of life associated with the convenience of local healthcare. In determining the value, we took into consideration the value of a coordinated home health model for patient outcomes, and the value of support groups to patient recovery. Redford Williams, Director, Behavioral Medicine Research Center at Duke noted, "Back in 1992 we published a paper in JAMA that clearly documented this (importance of support), showing that heart patients with a spouse, a confidant or both had a 5-year mortality rate of only 18

---

percent, compared to only 50 percent in those with neither spouse nor confidant." Having access to care at home, lends to a “social recovery model” with the convenience of family and friends assisting in the support group towards recovery. We estimate the value of a coordinated care model with the added convenience of a “social recovery model” as $25,000 per person. We attribute the value to wages earned by patient, supporting members and shorter recovery periods. If 100 patients experienced the benefits of quality of life per year, the value would be $2,500,000. Over 20 years, the quality of life would be valued at $50,000,000.

In a recent assessment conducted by iVantage, they concluded that Medicare costs per capita dollar by Physician service type were $531 more expensive in urban areas than rural. In one year, if 2154 (10% of the County) Medicare patients from Calhoun County received their Physician services locally rather than urban areas, Medicare would save $1,139,207. Over the course of twenty years, Medicare would save $22,784,148 in Physician services.

In closing, positive patient experiences and access to primary and specialty healthcare is valued at $5,816,165 for year one of the Waiver. For the lifetime of the Waiver 1115, the value of these projects to rural Calhoun County, Texas is valued at $17,264,660. The essential component to achieving these desired outcomes is a trained workforce. The Aidet Project through the Waiver 1115 offers a conduit for this knowledge and transformation.

Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction
Performing Provider/TPI: Memorial Medical Center/137909111
Unique RHP outcome identification number: 137909111.3.4/Pass 3

Outcome Measure Description:
To increase the ability of Memorial Medical Center (MMC) to provide the “right care at the right time in the right setting,” patient satisfaction with primary, specialty care, and hospital services shall be essential. With the “expanding access to care” and Hospitalist initiatives (137909111.1.1 and 137909111.2.3) we will provide critically needed services to a medically underserved area of rural Texas as identified in our Region’s community needs assessment. However, ensuring patients have access to services at times that are convenient for them, are able to secure appointments/access with appropriate caregivers, are critical elements to producing life saving, as well as, cost saving measures.

Since this is a new project for Memorial Medical Center, we will use DY 2 to plan the project and establish baseline rates. In DY3, DY 4 & DY 5, we will measure IT-6.1 Percent improvement over baseline of patient satisfaction scores specifically related to the measure IT-6.1. Patients are getting timely care, appointments, and information. Currently, a structured patient satisfaction survey does not exist to capture this measure at Memorial Medical Center. Therefore, the baseline will be set at 0. However, we expect to improve this measure by 10% by the end of the waiver.

Rationale:
Memorial Medical Center has selected the process milestones and outcome improvement targets because we are certain if the patient receives timely healthcare and education, they are more likely to continue leading healthy lives and obtaining preventive healthcare on a regular basis which ultimately leads to reduced healthcare costs.

We intend to use the HCAHPS survey to improve our performance as measured by whether patients are (1) getting timely care, appointments and information. Obtaining patient feedback on our ability to provide the right care at the right time is critical to the success of this project and the internal operations of the clinic. This data will provide us with meaningful and objective information that will be used to determine whether our clinic has met patient expectations related to obtaining timely care and information, and will identify areas where we need to improve. Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner or have physicians readily available for hospital admissions. The priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. Further, with an educated and confident staff, we anticipate better communication between patients and caregivers resulting in positive outcomes and experiences. The HCAHPS survey is an effective tool for measuring our progress and will provide valuable information and feedback on our performance and areas where improvement is needed.

Because over 60% of our community out-migrates for healthcare needs, it is important that patient satisfaction and access to care needs are met locally.1 Measuring that we are meeting the needs of the patients we intend to serve, represents the best outcome for our project.

Through survey results and our participation in a collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

**Outcome Measure Valuation:**

We considered both the costs and benefits to our organization and community in order to value the Outcome Measure – IT-6.1 Percent improvement over baseline of patient satisfaction scores. We believe it will take DY2 and part of DY3 to effectively develop and plan the Outcome Improvement Targets in DY4 and DY5. We do not currently perform or contract with a company to perform surveys for outpatient services, but we intend to select a vendor in DY 2. We believe with the improvement in patient satisfaction scores specifically the improvement target of patients getting timely care, appointments and information, this will decrease unnecessary Emergency Room visits, hospital stays, etc. because patients will be receiving the care and attention they need on a consistent and dependable basis. This Outcome Measure will serve the total outpatient service population of Memorial Medical Center, and it will ultimately assist Port Lavaca and the surrounding communities to live healthier lives and be healthier communities.

When valuing patient satisfaction with healthcare we looked at the project three-fold. We found such a project had significant economic, quality of life and cost savings value.

First, we surmised the economic value to the County as a whole, the patient, and industry. Roughly 70% of Calhoun County out-migrates for healthcare needs. With that migration to other communities travels revenue from sales tax for meals, gas, shopping and a half day of work. If 10% of the community (2145 citizens) were to utilize healthcare services locally $100,035 in gas and meals alone would remain in the community. Over 20 years, $2,000,700 would be generated from travel. Further, we calculated the revenue lost by patients leaving their jobs for a half day to travel outside the community for healthcare. If 10,000 workers with the average salary of $40,000 took a half day of personal time for doctors appointments outside the area, their absence would generate a loss to industry in the amount of $76,923 in one year and $1,538,461 over 20 years. Further, the revenue generated by local healthcare services would have a significant economic impact on tax valuation. With positive tax revenue, tax rates could be lowered resulting in incentives for business and industry to develop in the area. Job creation, housing expansion and development of amenities add to the quality of life for Calhoun County residents. If we improved access to care and patient satisfaction, the need to leave the area for healthcare services would decrease significantly. Without consist access to an admitting physician, EMS often bypasses Memorial Medical Center to hospitals outside the service area with physicians onsite. The additional transportation time/cost and inconvenience to patients and their families offers a value to this project as well.

In July 2012, Formosa Plastics Corporation and Calhoun County agreed to a $2 million tax abatement for future plant expansions. Recognizing the need for access to healthcare, Formosa Plastics designated the funds be used for construction of a Hospital Based Clinic. To industry, the need for access to healthcare locally is valued more than $2 million. To the worker, the patient experience must be positive to build trust and healthcare relationships in the area.

Secondly, we subjectively valued the quality of life associated with the convenience of local healthcare. In determining the value, we took into consideration the value of a coordinated home health model for patient outcomes, and the value of support groups to patient recovery.

---

Redford Williams, Director, Behavioral Medicine Research Center at Duke noted, "Back in 1992 we published a paper in JAMA that clearly documented this (importance of support), showing that heart patients with a spouse, a confidant or both had a 5-year mortality rate of only 18 percent, compared to only 50 percent in those with neither spouse nor confidant." Having access to care at home, lends to a “social recovery model” with the convenience of family and friends assisting in the support group towards recovery. We estimate the value of a coordinated care model with the added convenience of a “social recovery model” as $25,000 per person. We attribute the value to wages earned by patient, supporting members and shorter recovery periods. If 100 patients experienced the benefits of quality of life per year, the value would be $2,500,000. Over 20 years, the quality of life would be valued at $50,000,000.

In a recent assessment conducted by iVantage, they concluded that Medicare costs per capita dollar by Physician service type were $531 more expensive in urban areas than rural. In one year, if 2154 (10% of the County) Medicare patients from Calhoun County received their Physician services locally rather than urban areas, Medicare would save $1,139,207. Over the course of twenty years, Medicare would save $22,784,148 in Physician services. In closing, positive patient experiences and access to primary, specialty healthcare in or out of a hospital setting are valued at $5,816,165 for year one of the Waiver. For the lifetime of the Waiver 1115, the value of these projects to rural Calhoun County, Texas is valued at $17,264,660.

---

3iVantage, Rural Relevance Under Healthcare Reform, April 2012.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (*add outcome amounts over DYs 2-5)*: $291,880
Mental Health and Mental Retardation Authority of Harris County
Pass 1
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Unique RHP outcome identification numbers: 113180703.3.1

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHS survey
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the
particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $295,582.04
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

**Unique RHP outcome identification numbers:** 113180703.3.5

**Outcome Measure Description:**

IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

**Process Milestones:**
- **DY 2:**
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- **DY 3:**
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHS survey
- **DY 5:**
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey

**Rationale:**
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome.
This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.7

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHS survey
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to
measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**Milestone 1: P-1:** Project planning-engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans  
**Metric 1:** Conduct meetings of stakeholders, project staff, RHP partners and other key parties to gather relevant information  
**Data Source:** Meetings minutes, project flow charts and timelines  
**Goal:** To integrate stakeholder input in development of program plan

**Milestone 6: P-1:** Project planning, engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans  
**Metric 6:** Conduct meetings of stakeholders, project staff, RHP partners and other key parties to gather relevant information  
**Data Source:** Meetings minutes, project flow charts and timelines  
**Goal:** To complete project planning process and implement

**Milestone 11: OD-6:** Patient Satisfaction  
**Metric 11:** IT 6-1 Percent improvement over baseline of patient satisfaction scores  
a. Numerator: Percent improvement in targeted patient satisfaction as measured by the CAPHS domain  
b. Denominator: Number of patients who were administered the survey  
**Data Source:** Patient survey  
**Goal:** 5% increase over baseline

**Milestone 12: OD-6:** Patient Satisfaction  
**Metric 12:** IT 6-1 Percent improvement over baseline of patient satisfaction scores  
a. Numerator: Percent improvement in targeted patient satisfaction as measured by the CAPHS domain  
b. Denominator: Number of patients who were administered the survey  
**Data Source:** Patient survey  
**Goal:** 10% increase over baseline

**Estimated Incentive Payment:**  
$15,719.30  
$36,481.00  
$194,919.26  
$423,737.53

**Milestone 2: P-2:** Establish baseline  
**Metric 2:** Identify domains of patient satisfaction to be measured  
**Data Source:** literature review  
**Goal:** determine how baseline will be established for patient satisfaction domain

**Milestone 7: P-2:** Establish baseline  
**Metric 7:** Select and implement patient satisfaction survey to assess the desired domains of patient satisfaction  
**Data Source:** Clinical records; monthly management reports  
**Goal:** obtain baseline of satisfaction survey from patients receiving service

**Estimated Incentive Payment:**  
$15,719.30

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $1,230,413.28
**Title of Outcome** Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

**Unique RHP outcome identification numbers:** 113180703.3.10

**Outcome Measure Description:**

IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

**Process Milestones:**

- **DY 2:**
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- **DY 3:**
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**

- **DY 4:**
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHs survey

- **DY 5:**
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHs survey

**Rationale:**

The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department, and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to
measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.11

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHS survey
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to
measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $78,821.41
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.12

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHS survey
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to
measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**Title of Outcome Measure (Improvement Target):** IT-6.1: Percent improvement over baseline of patient satisfaction scores

**Unique RHP outcome identification numbers:** 113180703.3.13

**Outcome Measure Description:**
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in CSQ8 scores
- Denominator: Number of patients who were administered the survey

**Process Milestones:**
- **DY 2:**
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders
- **DY 3:**
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - IT 6.1: Obtain a total average score for patients served of 2.5 or higher on the CSQ8 measure of patient satisfaction
- **DY 5:**
  - IT 6.1: Increase total average score for patients served on the CSQ8 measure of patient satisfaction by 25% over DY4

**Rationale:**
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external...
benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain as measured by the CSQ-8.

The goals for improvement have been set at an average score of 2.5 in DY 4 and a 25% increase in scores over DY4 in DY5. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Patients entering services will be given the CSQ-8 upon completion.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe that if patients are satisfied with services received and communication with providers, they would be more willing to continue in ongoing services, thereby reducing preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $950,105.33**
Title of Outcome Measure (Improvement Target): IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Unique RHP outcome identification numbers: 113180703.3.14

Outcome Measure Description:
IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings
- The number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baselines for patients served
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT-9.1: Decrease in the number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration year by 5% from baseline
- DY 5:
  - IT-9.1: Decrease in the number permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 10% from baseline

Rationale:
The Process milestones were chosen as stated above in order to develop a strong collaborative team approach between the clinical staff, administrators, stake-holders, law-enforcement officers, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. The first steps in DY 2 will be project planning (P-1) then establishment of baselines (P-2) for the number of permanent members and the number of arrests. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). In DY 3 a similar process will provide for accurate measurement of baselines from which to measure the success of the psychosocial rehab intervention. In
particular, we chose to add Process milestone P-3 Develop and test data systems in order to determine any new systemic changes in data collection that the collaborations may have allowed for that may not have been available in DY2.

We hope that the ratio of arrests to intervention will decrease as the enhancement and development of the St. Joseph House take place. At this time, we are not selecting a specific metric or percent of expected change. The rationale for determining this rate at a later time is that the base rate of arrests is expected to be low and the percent of change will need to appropriately reflect meaningful changes in arrests. St. Joseph House administrators and stakeholders will work in conjunction with the MHMRA Outcomes Department and the MHMRA Quality Improvement Department to determine an appropriate rate of change.

Once initial rates of change in DY 4 have been determined another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in reducing preventable mental health admissions and readmissions to criminal justice settings. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

We have selected preventable mental health admissions/readmissions to criminal justice setting as a measure because many of the individuals in the CIRT program have a history of arrests. In recent surveys it has been noted that 25% of the inmates in Harris County Jail are receiving psychotropic medications. Further, more than 16% have histories of treatment within the public mental health system. In many instances, it appear likely that individuals with mental disorders are arrested and jailed at significant public expense when appropriate mental health care could potentially avert criminalization of episodes of untreated mental disorder. It is also important to note that all patients have a right to be treated in the least-restrictive environment possible; therefore, the CIRT is an intervention that would ensure patients’ rights are respected and community treatment is more likely.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $481,999.08
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Unique RHP outcome identification numbers: 113180703.3.20

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in CSQ8 scores
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served-determine process for data collection
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Obtain a total average score for patients served of 2.5 or higher on the CSQ8 measure of patient satisfaction
- DY 5:
  - IT 6.1: Increase total average score for patients served on the CSQ8 measure of patient satisfaction by 25% over DY4

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome.
This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain as measured by the CSQ-8.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Patients entering services will be given the CSQ-8 upon completion.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe that if patients are satisfied with services received and communication with providers, they would be more willing to continue in ongoing services, thereby reducing preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-10.1: Functional Status

Unique RHP outcome identification numbers: 113180703.3.21

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description: IT-10.1: Demonstrate improvement in functional status
- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5% over baseline scores.
- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10% over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths,
Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown sensitivity to change in public mental health settings such as the proposed program.

In the initial year of serving patients in DY4, the patients will receive the ANSA at pre- and post completion of the CRU intervention. In DY 4, the goals for improvement from pre to post test ANSA scores have been set at 5% and 10% in DY 5. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-alone” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-alone” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

**Title of Outcome Measure (Improvement Target):** IT-9.4: Other outcome improvement target: Percent decrease in psychiatric symptoms that provoke behavioral crises

**Unique RHP outcome identification numbers:** 113180703.3.23

**Performing Provider/TPI:** Mental Health and Mental Retardation Authority of Harris County/113180703

**Outcome Measure Description:** IT-9.4: Percent improvement over baseline of patient psychiatric symptoms using the Reiss Screen for Maladaptive Behavior
- Numerator: Average change in Reiss score across patients
- Denominator: Average prior score across patients

**Process Milestones:**
- **DY 2:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders
- **DY 3:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - IT 6.1: Rate 2: Improve patient psychiatric symptoms by 5% over baseline scores for one domain of patient symptoms
- **DY 5:**
  - IT 6.1: Rate 2: Improve patient psychiatric symptoms by 10% over baseline scores for one domain of patient symptoms

**Rationale:**
The primary function of an outpatient clinic is to reduce the behavioral/psychiatric symptoms that provoke behavioral crises and result in inappropriate care in settings such as emergency departments, inpatient psychiatric units and jails. This function is challenging for clinics that are unfamiliar with the target population and that are not familiar with well-established, evidence-based measures to evaluate progress. The proposed program is skilled in treating the target population and has selected the Reiss Screen for Maladaptive Behaviors to evaluate treatment outcomes. The Reiss Screen has been used extensively in research and clinical settings and is
nationwide normed on the target population of people with IDD/ASD and co-occurring mental illness. The Reiss Screen is available for children and adults, allowing uniformity in how all of the program’s patients will be assessed.

Upon intake, each patient will be assessed on the Reiss Screen to establish baseline levels of symptoms. Patients will be reevaluated at 3 months, 6 months and 12 months to track progress. From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient clinical progress. This information can then be provided to clinic staff in order to modify treatment goals and interventions as needed.

**Outcome Measure Valuation:**

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-9 Right Care, Right Setting, IT-9.4: Other outcome improvement target: Percent decrease in psychiatric symptoms that provoke behavioral crises. It is hypothesized, and supported by research literature, that patients with co-occurring IDD/ASD are often treated in settings that do not match their needs, by well-meaning clinicians who are not skilled in the IDD/ASD behavioral specialty. The mismatch between need and treatment results in poor clinical outcomes and utilization of inappropriate resources, such as emergency rooms, inpatient hospital units and jails. Access to competent outpatient care that promotes and demonstrates amelioration of symptoms is expected to result in benefits for the patient and the patient’s family, and result in overall savings for a healthcare system that will not be utilizing funds ineffectively in response to repeated crises.
### Related Category 1 or 2: 1.9

#### Starting Point/Baseline:
Baseline will be taken in DY 3 with about 150 anticipated patients

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $448,651.28
Title of Outcome Measure (Improvement Target): IT-10.1: Functional Status

Unique RHP outcome identification numbers: 113180703.3.24
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description: IT-10.1: Demonstrate improvement in functional status
- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5% over baseline scores.
- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10% over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths, Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown sensitivity to change in public mental health settings such as the proposed program.
From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-alone” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

TOTAL EST. INCENTIVE PAYMENTS FOR 4-DY: $879,658.28
Title of Outcome Measure (Improvement Target): IT-10.1: Functional Status

Unique RHP outcome identification numbers: 113180703.3.25

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description: IT-10.1: Demonstrate improvement in functional status
- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5 % over baseline scores.
- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10 % over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths, Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown
sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care.

**TOTAL EST. INCENTIVE PAYMENTS FOR 4-DY:** $879,658.28
Title of Outcome Measure (Improvement Target): IT-10.1: Functional Status

Unique RHP outcome identification numbers: 113180703.3.26

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description: IT-10.1: Demonstrate improvement in functional status

- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5 % over baseline scores.

- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10 % over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths, Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown
sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care.

  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5% over baseline scores.
- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10% over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths,
Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-alone” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10% over baseline scores.

**Rationale:**

The **Adult Needs and Strengths Assessment (ANSA)** is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths, Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown
sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified improved functional skills as measured by the ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome improvement goal because it measures patient benefits targeted through services offered in the outpatient setting proposed in this project. The ANSA addresses a patient’s ability to function, providing evidence of the functional improvements expected to be seen by outpatient treatment. It is hypothesized that patients will be better served by providing ongoing outpatient treatment, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. Specifically, we believe that improved patient outcomes that include symptom reduction and improved functional status, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ outcomes are not improved, it is more likely patients will disengage from services and may continue to over-utilize emergency services and inpatient care rather than engaging in preventive care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-alone” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

Title of Outcome Measure (Improvement Target): IT-10.1: Functional Status

Unique RHP outcome identification numbers: 113180703.3.31

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description: IT-10.1: Demonstrate improvement in functional status
- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5% over baseline scores.
- DY 5:
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10% over baseline scores.

Rationale:

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are expected to improve as a result of the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths, Culture,
Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. **Title of Outcome Measure (Improvement Target):** IT-10.1: Functional Status

**Unique RHP outcome identification numbers:** 113180703.3.34

**Performing Provider/TPI:** Mental Health and Mental Retardation Authority of Harris County/113180703

**Outcome Measure Description:** IT-10.1: Demonstrate improvement in quality of life (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.

b. Data source: Provider may select a validated assessment tool for quality of life.

- Numerator: Percent improvement in functional status
- Denominator: Number of patients who were administered the survey

**Process Milestones:**

- **DY 2:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- **DY 3:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**

- **DY 4:**
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 5 % over baseline scores.

- **DY 5:**
  - IT 10.1: Rate 1: Improve patient functional status as measured the ANSA by 10 % over baseline scores.

**Rationale:**

The Adult Needs and Strengths Assessment (ANSA) is a multi-purpose tool developed to facilitate quality improvement initiatives, and to allow for the monitoring of outcomes of services. It has demonstrated reliability and validity. We propose to use the ANSA to measure aspects of functional status that are anticipated to show improvement through the expansion of outpatient mental health services. Specifically, the ANSA measures Risk Behaviors, Behavioral Health Needs, Life Domain Functioning, Family/Caregiver Strengths and Needs, Strengths,
Culture, Psychiatric Hospitalizations, Crisis History. Furthermore the ANSA has shown 
sensitivity to change in public mental health settings such as the proposed program.

From an initial baseline to be conducted in DY 3, the goals for improvement in ANSA 
scores have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 
have been determined, another cycle of Plan Do Study Act (PDSA) can also be executed to 
determine the successes and the need for improvements in addressing patient outcomes. This 
information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to 
transforming the current health care delivery system toward a patient-centered, coordinated 
delivery model that improves patient satisfaction and health outcomes. Based on these 
objectives, the proposed program has identified improved functional skills as measured by the 
ANSA (Adult Needs and Strengths Assessment), as a targeted outcome for outcome 
improvement goal because it measures patient benefits targeted through services offered in the 
outpatient setting proposed in this project. The ANSA-addresses a patient’s ability to function, 
providing evidence of the functional improvements expected to be seen by outpatient treatment. 
It is hypothesized that patients will be better served by providing ongoing outpatient treatment, 
i.e. when the menu of service options is not sharply curtailed by agency resource limitations. 
Specifically, we believe that improved patient outcomes that include symptom reduction and 
improved functional status, access to providers, and communication with providers, will reduce 
preventable admissions and readmissions to psychiatric and other inpatient facilities. If patients’ 
outcomes are not improved, it is more likely patients will disengage from services and may 
continue to over-utilize emergency services and inpatient care rather than engaging in preventive 
care. Since this patient outcome is proposed in conjunction with patient satisfaction as “stand-
only” measures, it will be valued at 50% of the Category 3 allocation for this proposed program.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.36

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores
- Numerator: Percent improvement in CSQ8 scores
- Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for CSQ8 measure of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for CSQ8 measure of patient satisfaction

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external...
benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain as measured by the CSQ-8.

The goals for improvement have been set at obtaining an average score of 2.5 in DY4 and then increase by 25% over DY 4 in the final DY. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Patients entering services will be given the CSQ-8 upon completion.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe that if patients are satisfied with services received and communication with providers, they would be more willing to continue in ongoing services, thereby reducing preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Mental Health and Mental Retardation Authority of Harris County
Pass 2
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Unique RHP outcome identification numbers: 113180703.3.15

Outcome Measure Description:
- IT-6.1: Percent improvement over baseline of patient satisfaction scores
  - Numerator: Percent improvement in targeted patient satisfaction domain
  - Denominator: Number of patients who were administered the survey

Process Milestones:
- DY 2:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1: Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5% over baseline scores for the communication with provider domain as measured by the CAPHAS survey
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHAS survey

Rationale:
The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the
particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**
Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $448,077.17
Title of Outcome Measure (Improvement Target): IT-3.8 Behavioral Health /Substance Abuse 30 day readmission rate

Performing Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Unique RHP outcome identification number: 113180703.3.17

Outcome Measure Description:
IT-3.8 Behavioral Health /Substance Abuse 30 day readmission rate
- Numerator: The number of readmissions, for patients in the target population 18 years and older, for any cause, within 30 days of discharge from the index behavioral health and substance abuse admission is indicated as either the primary or secondary diagnosis. If an index admission has more than 1 readmission, only the first is counted as a readmission.
- Denominator: The number of admissions, for patients in the target population 18 years and older, for patients discharged from the hospital with a principal or secondary diagnosis of behavioral health and substance abuse and with a complete claims history for the 12 months prior to admission

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4: IT-3.8 5% decrease in re-admissions over baseline
- DY 5: IT-3.8 10% decrease in re-admissions over baseline

Rationale:
The goal of inpatient psychiatric/behavioral care is to stabilize an individual’s condition and facilitate successful reintegration into everyday life. For people with IDD/ASD and co-occurring mental illness, the supports to promote this goal must be coordinated by people who are knowledgeable in developmental disabilities, and often guided after discharge to help the person whose cognitive/intellectual abilities are often barriers to following through with aftercare. The lack of coordinated post-discharge plans and follow-through often result in re-hospitalizations or admission to very expensive and restrictive institutional care, which in Texas exceeds $177,624 per person, per year. The proposed model is intended to reduce the costs of healthcare by preventing these outcomes and demonstrating these benefits through the selected Category 3 measures.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in establish baselines in DY 3 that will be used to evaluate the project’s outcomes in DY4 and DY5. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4).

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:** Our local region has identified general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs), as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more successful linkage to post-discharge treatment and services that prevent readmissions. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are
dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $475,882.74
Title of Outcome Measure (Improvement Target): IT-3.8 Behavioral Health/Substance Abuse 30 day readmission rate

Performing Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Unique RHP outcome identification number: 113180703.3.39

Outcome Measure Description:
IT-3.8 Behavioral Health/Substance Abuse 30 day readmission rate

- Numerator: The number of readmissions, for patients in the target population 18 years and older, for any cause, within 30 days of discharge from the index behavioral health and substance abuse admission is indicated as either the primary or secondary diagnosis. If an index admission has more than 1 readmission, only the first is counted as a readmission.
- Denominator: The number of admissions, for patients in the target population 18 years and older, for patients discharged from the hospital with a principal or secondary diagnosis of behavioral health and substance abuse and with a complete claims history for the 12 months prior to admission

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4: IT-3.8 5% decrease in re-admissions over baseline
- DY 5: IT-3.8 10% decrease in re-admissions over baseline

Rationale:
The goal of inpatient psychiatric/behavioral care is to stabilize an individual’s condition and facilitate successful reintegration into everyday life. For people with IDD/ASD and co-occurring mental illness, the supports to promote this goal must be coordinated by people who are knowledgeable in developmental disabilities, and often guided after discharge to help the person whose cognitive/intellectual abilities are often barriers to following through with aftercare. The lack of coordinated post-discharge plans and follow-through often result in re-hospitalizations or admission to very expensive and restrictive institutional care, which in Texas exceeds $177,624 per person, per year. The proposed model is intended to reduce the costs of healthcare by preventing these outcomes and demonstrating these benefits through the selected Category 3 measures.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in establish baselines in DY 3 that will be used to evaluate the project’s outcomes in DY4 and DY5. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4).

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:** Our local region has identified general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs), as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more successful linkage to post-discharge treatment and services that prevent readmissions. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): **$475,882.74**
Title of Outcome Measure (Improvement Target): IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

Unique RHP outcome identification numbers: 113180703.3.28

Performing Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Outcome Measure Description:
IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings
- The number of individuals receiving ICC intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baselines for patients served
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT-9.1: Decrease in the number of individuals receiving ICC intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 5% from baseline
- DY 5:
  - IT-9.1: Decrease in the number of individuals receiving ICC intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 10% from baseline

Rationale:
The Process milestones were chosen as stated above in order to develop a strong collaborative team approach between the clinical staff, administrators, stake-holders, law-enforcement officers, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. The first steps in DY 2 will be project planning (P-1) then establishment of baselines (P-2) for the number of ICC interventions and the number of
arrests. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). In DY 3 a similar process will provide for accurate measurement of baselines from which to measure the success of the ICC intervention. In particular, we chose to add Process milestone P-3 Develop and test data systems in order to determine any new systemic changes in data collection that the collaborations may have allowed for that may not have been available in DY2.

We hope that the ratio of arrests to intervention will decrease as ICC teams and officers have more experience working collaboratively. At this time, we are not selecting a specific metric or percent of expected change. The rationale for determining this rate at a later time is that the base rate of arrests is expected to be low and the percent of change will need to appropriately reflect meaningful changes in arrests. ICC administrators and stakeholders will work in conjunction with the MHMRA Outcomes Department and the MHMRA Quality Improvement Department to determine an appropriate rate of change.

Once initial rates of change in DY 4 have been determined another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in reducing preventable mental health admissions and readmissions to criminal justice settings. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

We have selected preventable mental health admissions/readmissions to criminal justice setting as a measure because many of the recipients of ICC have a history of arrests and emergency calls to law enforcement. Without ICC, these calls would traditionally result in the dispatch of a law enforcement officer with limited mental health training/experience. Research has indicated non-trained officers may be more likely to arrest mentally ill patients, or interpret their behaviors as threatening, compared to trained officers. Therefore, we believe that the ICC expansion will result in better assessment and management of these individuals, which would result in fewer and more appropriate arrests. In recent surveys it has been noted that 25% of the inmates in Harris County Jail are receiving psychotropic medications. Further, more than 16% have histories of treatment within the public mental health system. In many instances, it appear likely that individuals with mental disorders are arrested and jailed at significant public expense when appropriate crisis-oriented mental health care could potentially avert criminalization of episodes of untreated mental disorder. It is also important to note that all patients have a right to be treated in the least-restrictive environment possible; ending interventions without detention ensure patients’ rights are respected and community treatment is more likely.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $842,680.77
Title of Outcome Measure (Improvement Target): IT-10.2 Activities of Daily Living

Unique RHP outcome identification numbers: 113180703.37 / Pass 2

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Outcome Measure Description:
IT-10.2: Activities of Daily Living: Demonstrate improvement in ADL scores, as measured by evidence based and validated assessment tool, for the target population.
- Numerator: Average current score minus average baseline score in the Supports Intensity Scale (SIS) for adults, and an instrument TBD for children
- Denominator: Average baseline score

Process Milestones:
- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:
- DY 4:
  - IT. 10.2: Rate 1: Improve functional status by 5 % over baseline scores for one domain of functional status
- DY 5:
  - IT 6.1: Rate 1: Improve functional status by 10 % over baseline scores for one domain of functional status

Rationale:
The ultimate goal of any patient-centered intervention is to improve the individual’s circumstances by empowering him/her and the family or other caregivers to resolve the immediate problem and future recurrences. To that end, it is important to determine if an
The proposed project will use the Supports Intensity Scale (SIS) that has been established for this purpose and normed on the target population. This scale is designed to measure an adult’s needs in various domains of daily life; it is sensitive to change as the person’s circumstances improve. The SIS is used nationally in several states and has been used internationally with the target population. A children’s version of the SIS is under development but may not be ready for use for this project. An alternative measure suitable for children with IDD will be selected after researching the options that are supported by research studies in this population.

The process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly-formed Outcome Management Department of MHMRA. As part of DY 2 process goals, the Outcome Management Department will complete literature reviews to identify relevant, empirically-validated, and empirically-based measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure for use with children.

Each person referred will be evaluated with the appropriate functional assessment tool, and, from this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements in the team’s interventions in order to maximize benefits for patients and families.

**Outcome Measure Valuation:** Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-10 Quality of Life/Functional Status as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, *i.e.* when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in greater independence and decreased reliance on more costly, less effective external systems, more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-2.13 Other Admissions Rate: Rate of Admission into State Supported Institutional Care

Performing Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Unique RHP outcome identification number: 113180703.3.38

Outcome Measure Description:
IT-2.13 Other Admissions Rate: Rate of Admission into State Supported Institutional Care

- Numerator: Number of admissions in DY among patients receiving services by program minus baseline
- Denominator: Number of baseline admissions

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4: IT-2.13 5% decrease in admissions over baseline
- DY 5: IT-2.13 10% decrease in admissions over baseline

Rationale:
The goal of inpatient psychiatric/behavioral care is to stabilize an individual’s condition and facilitate successful reintegration into everyday life. For people with IDD/ASD and co-occurring mental illness, the supports to promote this goal must be coordinated by people who are knowledgeable in developmental disabilities, and often guided after discharge to help the person whose cognitive/intellectual abilities are often barriers to following through with aftercare. The lack of coordinated post-discharge plans and follow-through often result in re-hospitalizations or admission to very expensive and restrictive institutional care, which in Texas exceeds $177,624.
per person, per year. The proposed model is intended to reduce the costs of healthcare by preventing these outcomes and demonstrating these benefits through the selected Category 3 measures.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop effective care transition and aftercare follow up plans the team will be able to establish baselines in DY 3 that will be used to evaluate the project’s outcomes in DY4 and DY5.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient outcomes. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:** Our local region has identified general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-2- Potentially Preventable Admissions, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more successful linkage to post-discharge treatment and services that prevent readmissions.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $475,882.74
Mental Health and Mental Retardation Authority of Harris County

Pass 3
Title of Outcome Measure (Improvement Target): IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Unique RHP outcome identification numbers: 113180703.3.18

Outcome Measure Description:

IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

- The number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years

Process Milestones:

- **DY 2:**
  - P-1- Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baselines for patients served
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- **DY 3:**
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

**DY 4:**
- IT-9.1: Decrease in the number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration year by 5% from baseline

**DY 5:**
- IT-9.1: Decrease in the number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 10% from baseline

Rationale:

The Process milestones were chosen as stated above in order to develop a strong collaborative team approach between the clinical staff, administrators, stakeholders, law-enforcement officers, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. The first steps in DY 2 will be project planning (P-1) then establishment of baselines (P-2) for the number of permanent members and the number of arrests. The procedures for testing data collection will be evaluated using the Plan Do Study Act.
(PDSA) cycles (P-4). In DY 3 a similar process will provide for accurate measurement of baselines from which to measure the success of the psychosocial rehab intervention. In particular, we chose to add Process milestone P-3 Develop and test data systems in order to determine any new systemic changes in data collection that the collaborations may have allowed for that may not have been available in DY2.

We hope that the ratio of arrests to intervention will decrease as the enhancement and development of the St. Joseph House take place. At this time, we are not selecting a specific metric or percent of expected change. The rationale for determining this rate at a later time is that the base rate of arrests is expected to be low and the percent of change will need to appropriately reflect meaningful changes in arrests. St. Joseph House administrators and stakeholders will work in conjunction with the MHMRA Outcomes Department and the MHMRA Quality Improvement Department to determine an appropriate rate of change.

Once initial rates of change in DY 4 have been determined another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in reducing preventable mental health admissions and readmissions to criminal justice settings. This information can then be provided to clinic staff in order to produce the needed improvements.

**Outcome Measure Valuation:**

We have selected preventable mental health admissions/readmissions to criminal justice setting as a measure because many of the individuals in the St. Joseph’s House have a history of arrests. In recent surveys it has been noted that 25% of the inmates in Harris County Jail are receiving psychotropic medications. Further, more than 16% have histories of treatment within the public mental health system. In many instances, it appear likely that individuals with mental disorders are arrested and jailed at significant public expense when appropriate mental health care could potentially avert criminalization of episodes of untreated mental disorder. It is also important to note that all patients have a right to be treated in the least-restrictive environment possible; therefore, St. Joseph’s House is an intervention that would ensure patients’ rights are respected and community treatment is more likely.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $886,467.86
Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.19

Outcome Measure Description:

IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for the communication with provider domain as measured by the CAPHS survey

- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10% over baseline scores for the communication with provider domain as measured by the CAPHS survey
**Rationale:**

The Process milestones were chosen in order to develop a strong collaborative team approach among the clinical staff, administrators, physicians, Program Compliance Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. This initiative will permit MHMRA, the performing provider, to improve on previous efforts to measure patient experience, through selection of reliable, valid measures with external benchmarks (national norms). As part of DY 2 process goals, the Outcome Management department will review the measures selected for this project. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a local baseline for the patient satisfaction domain of “How Well their Doctors Communicate” by DY2.

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Measurement of patient experience is significant in that the degree of patient satisfaction could be a determinant of willingness to return to services and engage in ongoing care. Both the Adult Visit Survey and the Adult Twelve Month Survey versions of the CAHPS questionnaire will be employed. Every new patient referred for outpatient services will receive the Adult Visit Survey after the completion of their first outpatient visit then the Adult Twelve Month Survey version will be used yearly for ongoing patients.

**Outcome Measure Valuation:**

Our local region has identified specific community objectives and needs that are related to transforming the current health care delivery system toward a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on these objectives, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available
services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce preventable admissions and readmissions to psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $217,719.12
**Title of Outcome Measure (Improvement Target):** IT-9.4: Other outcome improvement target: Percent decrease in psychiatric symptoms that provoke behavioral crises

**Unique RHP outcome identification numbers:** 113180703.3.29

**Performing Provider/TPI:** Mental Health and Mental Retardation Authority of Harris County/113180703

**Outcome Measure Description:** IT-9.4: Percent improvement over baseline of patient psychiatric symptoms using the BECK Depression Scale
- Numerator: Average change in BECK score across patients
- Denominator: Average prior score across patients

**Process Milestones:**
- **DY 2:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders
- **DY 3:**
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2: Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5: Disseminate findings, including lessons learned and best practices, to stakeholders

**Outcome Improvement Targets for each year:**
- **DY 4:**
  - IT 9.4: Rate 2: Improve patient psychiatric depressive symptoms by 5% over baseline scores
- **DY 5:**
  - IT 9.4: Rate 2: Improve patient psychiatric depressive symptoms by 10% over baseline scores for one domain of patient symptoms

**Rationale:**

The primary function of the proposed outpatient clinic for the vision-impaired is to reduce the behavioral/psychiatric symptoms that interfere and complicate medical interventions, provoke behavioral crises and result in inappropriate care in settings such as emergency departments, inpatient psychiatric units and jails. The proposed program is skilled in treating the target population and has selected the BECK Depression Inventory (BDI) to evaluate treatment outcomes. The BDI has been used extensively in research and clinical settings and is nationally...
normed on the target population of people co-occurring mental illness. The BDI is available for children and adults, allowing uniformity in how all of the program’s patients will be assessed.

Upon intake, each patient will be assessed using the BDI to establish baseline levels of symptoms. Patients will be reevaluated at 3 months, 6 months and 12 months to track progress. From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient clinical progress. This information can then be provided to clinic staff in order to modify treatment goals and interventions as needed.

**Outcome Measure Valuation:**

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction and IT-9.4: Other outcome improvement target: Percent decrease in psychiatric symptoms that provoke behavioral crises as a targeted outcome for quality improvement goal. It is hypothesized, and supported by research literature, that patients with depressive symptoms and co-morbid health issues are at higher risk of complications in treatment of their health condition and tend to have poor outcomes. It is hoped that by addressing depressive symptoms along with co-morbid health issues, as described in this narrative, that patients will improve both their mental health symptoms and medical condition more effectively.

Methodist Willowbrook Hospital

Pass 1
Title of Outcome Measure (Improvement Target): IT 1.18 - Follow up after Hospitalization for Mental Illness

Performing Provider Name / TPI: Methodist Willowbrook Hospital / 140713201

Unique RHP outcome identification number(s): 140713201.3.1

Outcome Measure Description:
IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
Our goal is that by year four we will have 60% with follow up within 30 days, and by year 5 we will have 80%.
Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
As it is difficult to arrange appointments so close to discharge because of patient and physician factors, our goal is that by the fourth year we will have 40% follow up within seven days and by the fifth year, 50%.

Process Milestones:
- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4: IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 60% above baseline
- DY5: IT 1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 80% above baseline

Rationale:
Process milestones in DY 2 are focused on training, education and partnership development. These efforts are largely external efforts focused on our medical staff, collaborating healthcare providers and community partners.
Process milestones in DY 3 are focused on establishing our baseline, factors that are driving utilization and establishing a process to follow up with patients post-discharge. These are largely internal efforts with our hospital based work teams.

Outcome Measure Valuation:
We have selected IT 1.18 as our quality outcome metric as we feel this is most important quality outcome to determine the success or impact of our project. Through a focused effort to follow up and coordinate the post discharge care needs of our targeted population we will demonstrate true
value to the community. Meaning, our targeted population will receive higher quality care in the correct care setting, all at a lower cost.

Pass 1
Title of Outcome Measure (Improvement Target): IT-3.2 Congestive Heart Failure 30-Day Readmission Rate

Unique RHP Outcome Identification Number(s): 127303903.3.1

Outcome Measure Description:
This outcome will measure the number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index HF admission. Given data limitations, only readmissions to the same facility will be included as part of each hospital’s rates.

Rationale:
The relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay. If the project is successful, then it will result in more effective management of chronic conditions, which in turn will result in the reduction of unnecessary readmissions. Congestive heart failure is an exemplar diagnosis for which effective disease management has been shown to reduce unnecessary hospital admissions. Therefore, the reduction in CHF admissions will be a reasonable metric by which to judge the effectiveness of this project.

Outcome Measure Valuation:
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction of potentially preventable CHF readmissions would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve a reduction in CHF readmission rates.

**Title of Outcome Measure (Improvement Target):** IT-2.1 Congestive Heart Failure Admission Rate (CHF)

**Unique RHP Outcome Identification Number(s):** 127303903.3.2

**Outcome Measure Description:**
The outcome for this measure is the reduction of preventable readmissions for all non-maternal discharges of age 18 years and older with a principal diagnosis code for congestive heart failure. All readmissions are counted as outcomes except those that are considered planned.

**Rationale:**
The increase in access to primary care physician services will decrease the number of admissions for diseases that can be adequately managed like CHF.

**Outcome Measure Valuation:**
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in readmissions for CHF would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $727,143**
**Title of Outcome Measure (Improvement Target):** IT-3.1 All Cause 30-Day Readmission Rate

**Unique RHP Outcome Identification Number(s):** 127303903.3.3

**Outcome Measure Description:**
The outcome for this measure is unplanned all cause 30-day readmission, IT-3.1. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned.

**Rationale:**
The expansion of specialty care capacity will promote and encourage patients to access care which will lead to better clinical outcomes for the community. OBMC took these potential effects into account when considering the appropriate incentive payment value for this project.

**Outcome Measure Valuation:**
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in all cause readmissions would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve decrease in all cause readmissions.

#### Process Milestone 1 [P-1]:
- **Project planning** – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans.

**Data Source:** Planning documentation. EHR, Claims, information pulled from newly created DSRIP database. Baseline # of specialists and specialty visits to be increased each year following DY2.

**Process 2**
- Estimated Incentive Payment: $46,243

#### Process Milestone 2 [P-2]:
- **Establish baseline rates.**

**Data Source:** EHR; Claims.

**Process 2**
- Estimated Incentive Payment: $46,243

### Year 2 (10/1/2012 – 9/30/2013)
- **Outcome Improvement Target 1 [IT-3.1]:** Potentially Preventable Readmissions: All Cause 30-Day Readmission Rate
  - **Baseline/Goal:** 1% improvement over DY2 baseline.
  - **Data Source:** EHR, Claims.

**Process 2**
- Estimated Incentive Payment: $107,204

### Year 3 (10/1/2013 – 9/30/2014)
- **Outcome Improvement Target 2 [IT-3.1]:** Potentially Preventable Readmissions: All Cause 30-Day Readmission Rate
  - **Baseline/Goal:** 2% improvement over DY2 baseline.
  - **Data Source:** EHR, Claims.

**Process 2**
- Estimated Incentive Payment: $172,025

### Year 4 (10/1/2014 – 9/30/2015)
- **Outcome Improvement Target 3 [IT-3.1]:** Potentially Preventable Readmissions: All Cause 30-Day Readmission Rate
  - **Baseline/Goal:** 3% improvement over DY2 baseline.
  - **Data Source:** EHR, Claims.

**Process 2**
- Estimated Incentive Payment: $411,363

### Year 5 (10/1/2015 – 9/30/2016)
- **Outcome Improvement Target 3 [IT-3.1]:** Potentially Preventable Readmissions: All Cause 30-Day Readmission Rate
  - **Baseline/Goal:** 3% improvement over DY2 baseline.
  - **Data Source:** EHR, Claims.

**Process 2**
- Estimated Incentive Payment: $411,363

### Year 2 Estimated Outcome Amount:
- $92,486

### Year 3 Estimated Outcome Amount:
- $107,204

### Year 4 Estimated Outcome Amount:
- $172,025

### Year 5 Estimated Outcome Amount:
- $411,363

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $783,078
Title of Outcome Measure (Improvement Target): IT-1.6 Cholesterol management for patients with cardiovascular conditions (NCQA-HEDIS)

Performing Provider: OakBend Medical Center (OBMC) / 127303903.

Unique RHP Outcome Identification Number(s): 127303903.3.4

Outcome Measure Description:
- OakBend will control the cholesterol of the relevant patient population.

Rationale:
- Total blood cholesterol is directly related to the development of coronary artery disease (CAD) and coronary heart disease (CHD), with most of the risk being associated with low-density lipoprotein cholesterol (LDL-C). When LDL-C levels are high, cholesterol can build up within the walls of the arteries, causing atherosclerosis, the build-up of plaque. Hemorrhaging or clot formation can occur at the site of plaque build-up, blocking arteries and causing heart attack and stroke. Reducing cholesterol in patients with known heart disease is critically important, as treatment can reduce morbidity (heart attack and stroke) and mortality by as much as 40%. The National Cholesterol Education Program (NCEP) has established guidelines for managing cholesterol levels in patients with heart disease. The guidelines established the need for close monitoring of LDL cholesterol in patients with coronary heart disease and set a target for LDL-C of less than or equal to 100 mg/dL for such patients. Cholesterol screening and control depends on the combined efforts of patient, physician and organization. Lifestyle factors and new medications offer tangible means for reducing cholesterol and the risk of heart disease.

Outcome Measure Valuation:
- OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the control of cholesterol would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve an increase in cholesterol control.

Title of Outcome Measure (Improvement Target): IT-9.2 ED Appropriate Utilization (Standalone Measure)

Unique RHP Outcome Identification Number(s): 127303903.3.5

Outcome Measure Description:
This outcome will focus on reducing ED admissions for patients with targeted conditions.

DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:

DY5:
IT-9.2 Reduce Emergency Department visits for target conditions. Reduce by 5% for DY 5.

Rationale:
If the project is successful, then it will result in improved access to care for patients with targeted conditions. By improving access to care and ensuring that patients receive the right care in the right setting, this project will reduce the inappropriate use of the Emergency Department to deliver the same care.

Outcome Measure Valuation:
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction of ED utilization would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve a reduction in ED utilization.

OakBend Medical Center

Pass 2
**Title of Outcome Measure (Improvement Target):** IT-8.1 Timeliness of Prenatal/Postnatal Care

**Unique RHP Outcome Identification Number(s):** 127303903.3.6 / Pass 2

**Outcome Measure Description:**
The outcome for this measure is the percentage of deliveries of live births for which women receive certain key facets of prenatal and postpartum care.

**Rationale:**
This project is explicitly tied to postnatal care.

**Outcome Measure Valuation:**
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, the time, effort, and clinical resources necessary to affect each outcome. The project will also strive to continuously provide quality service to the population.

In valuing this outcome measure, OBMC took into account the extent to which increases in key areas of prenatal and postnatal care would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

Regional Healthcare Partnership Plan

Region 3
Oakbend Medical Center
Pass 3
Title of Outcome Measure (Improvement Target): IT-3.4 Renal Disease 30-Day Readmission Rate

Unique RHP Outcome Identification Number(s): 127303903.3.7 / Pass 3

Outcome Measure Description:
The outcome for this measure is readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index renal disease, COPD, Congestive Heart Failure and Diabetes admissions.

Rationale:
OBMC has a relatively large population with the above diseases and part of the wellness program will be specifically targeted to these patients. In 2011, OBMC had 1,545 patients admitted with one of the above as their primary admitting diagnosis. There are more than triple that number who are admitted with these as a diagnosis secondary. Therefore, measuring the readmission rate for these disease specific illnesses will be a reasonable measure of this project’s success.

Outcome Measure Valuation:
OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in readmissions for these diagnoses would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $1,586,708*
Rice Medical Center
Pass 1
**Title of Outcome Measure (Improvement Target):** IT-6.1.1 Percent improvement over baseline of patient satisfaction scores establishing patients are getting timely care, appointments and information

**Performing Provider:** Rice Medical Center

**TPI:** 212060201

**Unique RHP outcome identification number:** 212060201.3.1

**Outcome Measure Description:** Rice will measure patient satisfaction for the patients served in the East Bernard clinic, who will have increased access to an FP/OB under Project 1.1.2. Rice will use the CAHPS survey to establish if patients who use the clinic feel they are receiving timely appointments, care, and information.

**Process Milestones**
- DY 2: P-1; P-1.1
- DY 3: P-5; P-5.1
- DY 4: P-4; P-4.1

**Outcome Improvement Target for each year:**
- DY4: IT-6.1
- DY5: IT-6.1

**Rationale:** The low-income community members residing in East Bernard and the boundaries of the Rice Hospital District are presently underserved by physicians providing primary care and OB services, as is reflected by Colorado County’s designation as a HPSA. In seeking to improve access to care, it is important to measure the patients’ perspective on how effective efforts toward obtaining that goal have been. If they have been successful, the patient survey scores will apprise Rice of best practices (i.e. using after-hours, having primary care providers who also specialize in a particular type of care). If patient satisfaction with access to timely care, appointments, and information does not increase, then Rice will have learned the lesson that perhaps the infrastructure or administration of the clinic need to change.

**Outcome Measure Valuation:** The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This is Rice’s most valuable Category 3 project because Rice seeks to improve patient access to primary care through participating in DSRIP, and this outcome will measure how successful Rice’s efforts have been. Patient satisfaction leads to increased and
earlier use of the health care delivery system, and better overall patient outcomes and quality of life. For these reasons, this outcome is of high value to the community.
### Related Category 1 or 2 Outcome Project(s):

**212060201.1.1**

**Starting Point/Baseline:**
To be established DY3.

**Milestone 1 [P-1]:** Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans. Data Source: Rice will identify the correct survey instrument, train providers on administering the survey, and begin educating patients on the hospital’s initiative to improve patient satisfaction. Process Milestone 1 Estimated Incentive Payment: $7,940

**Milestone 2 [P-2]:** Establish baseline rate Data Source: Using the HCAHPS standardized survey instrument, Rice will establish the average East Bernard Clinic patient satisfaction scores for all patients surveyed. Process Milestone 2 Estimated Incentive Payment: $9,203

**Outcome Improvement Target 1**

- IT 6.1(1): Establish if East Bernard Clinic patients are getting timely care, appointments and information.
- Improvement Target: Expect 5% increase of patient satisfaction over baseline
- Data Source: Patient survey

**Outcome Improvement Target 1 Estimated Incentive Payment:** $14,768

**Outcome Improvement Target 2**

- IT 6.1(1): Establish if East Bernard Clinic patients are getting timely care, appointments and information.
- Improvement Target: Expect 10% increase of patient satisfaction over baseline
- Data Source: Patient survey

**Outcome Improvement Target 2 Estimated Incentive Payment:** $35,314

**Year 2 Estimated Milestone Bundle Amount:** $7,940

**Year 3 Estimated Milestone Bundle Amount:** $9,203

**Year 4 Estimated Milestone Bundle Amount:** $14,768

**Year 5 Estimated Milestone Bundle Amount:** $35,314

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add milestone bundle amounts over Years 2-5):** $67,225
**Title of Outcome Measure (Improvement Target):** IT 6.1(1) – Percent improvement over baseline of patient satisfaction scores - timeliness of appointments, care, and information

**Unique RHP outcome identification number:** 212060201.3.2

**Performing Provider:** Rice Medical Center

**TPI:** 212060201

**Outcome Measure Description:**
Rice will engage in CAHPS patient surveys to measure the satisfaction of patients who have been entered into the ImmTrack system. Through expanding its use of Immunization Tracking, Rice will be able to communicate with patients about their immunization due dates and options. Additionally, Rice can use the data it collects to assure that patients do not receive duplicative immunization shots. This service will remove some of the burden on Rice’s hospital and clinic patients to remember when their immunizations are due, and if they have already updated them. Additionally, Rice can target populations that are especially at risk for flu and assure that they are seen early in the flu season (i.e. elderly, children, individuals with weak immune systems), which will improve these patients’ overall quality of life and satisfaction with the health care and information they receive from their provider. These improvements are intended to improve patients’ satisfaction with the timeliness of their appointments, care, and information from their provider.

**Starting Point/Baseline:**
Rice does not currently measure patient satisfaction scores in the domain of timeliness of appointments, care and information.

**Rationale:**
Colorado County has a high rate of preventable hospital stays (higher than Texas and Harris County), a high rate children living in poverty (higher than Texas and Harris County) and a high rate of poor physical health days (higher than Texas and Harris County). Children, the elderly, and those in poor health are especially at risk for being admitted to the hospital for the flu, so tracking who has been immunized in the community may help Rice reach out to those most at risk to assure that they receive their flu shot. According to the Planning Protocol, “Public reporting will serve to enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment.”

**Project Valuation:**
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This outcome’s value is based upon the importance of obtaining patients’ perspective on their health care provision and outcomes in our effort to transform the delivery system. Additionally, this project will touch the vast majority of Rice’s patients.
| Process Milestone 1 [P-1] Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans. Data Source: Rice will identify the correct survey instrument, train providers on administering the survey, and begin educating patients on the hospital’s initiative to improve patient satisfaction. Process Milestone 1 Estimated Incentive Payment $2,382 | Process Milestone 2 [P-2] Establish baseline rate Data Source: Use the relevant CAHPS survey to establish the average patient satisfaction score for patients seen in Colorado County clinics, measuring the timeliness of appointments, care, and information. Process Milestone 2 Estimated Incentive Payment $2,761 | Improvement Milestone 1 [IT-6.1] Improve Colorado County clinics’ patient satisfaction scores in the domain of timely appointments, care, and information Baseline/Goal: Improve by 10% over baseline Data Source: Patient survey Outcome Improvement Target 1 Estimated Incentive Payment: $4,430 | Improvement Milestone 2 IT 6.1.1 Improve Colorado County clinics’ patient satisfaction scores in the domain of timely appointments, care, and information Baseline/Goal: Improve by 15% over baseline Data Source: Patient survey Outcome Improvement Target 2 Estimated Incentive Payment: $10,594 |

Title of Outcome Measure (Improvement Target): IT-10.1 Quality of Life

Performing Provider: Rice Medical Center

TPI: 212060201

Unique RHP Outcome identification number: 212060201.3.3

Outcome Measure Description:

The outcome of the Chronic Disease Outreach project will be to accomplish improvement in quality of life scores over the life of the Waiver for Rice community members identified as at-risk or suffering from chronic conditions such as diabetes, high blood pressure, and COPD. Expected challenges in attaining this outcome include recruiting staff for the clinic, negotiating space for the clinic, reaching out to traditionally underserved communities, engaging in effective patient education, and doing so with limited resources.

Process Milestones:

• P-1 Project Planning; P-2 Establish baseline QoL scores for chronically ill targeted patients

Outcome Improvement Targets for each year:

IT-10.1 Quality of Life - demonstrating annual increase

Rationale:

Colorado County has a high rate of morbidity and mortality (both higher than Harris County), poor physical health days (higher than Texas and Harris County), and premature death (higher than Texas and Harris County). Colorado County residents will benefit from increased quality and quantity of interventions for their chronic diseases. Improved management of these conditions will lead to improved quality of life (as measured by an evidence based and validated assessment tool) for the patients.

Outcome Measure Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This project is valued to reflect the importance of maintaining quality of life for patients suffering from chronic disease, which has a ripple effect of improving their family and friends’ quality of life.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $ 40,335*
Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care: HbA1c poor control (>9.0%)

Performing Provider: Rice Medical Center

TPI: 212060201

Unique RHP Outcome Identification number: 212060201.3.4

Outcome Measure Description:
Rice will implement a Certified Diabetes Teaching Center for patients in Colorado County.

Through implementing a Certified Diabetes Teaching Center, Rice aims to improve the percentage of patients in Colorado County with uncontrolled blood sugar (IT1.10). The Center will accomplish this by educating the diabetic community on diabetes medication and diet management tactics, leading to better control of blood sugar. Patient education, follow-up, and management will result in better overall health outcomes for the targeted population, including increased quality of life, reduced use of acute care, and slower progression of this chronic disease. Achieving this outcome will require Rice to not only communicate with the target population, but to affect their lifestyle choices. Patients will need to reduce poor eating habits, increase physical activity, and manage their medications (when applicable), which Rice cannot force patients to do on a regular basis.

Rice intends to reach out to the community through innovative methods (including social media, creating coalitions, and other methods of community outreach) to create support networks and community engagement in accomplishing this outcome, which is meant to benefit individuals at-risk and the community as a whole.

Process Milestones:

- DY2: P-1; P-1.1
- DY3: P-3; P-3.1

Outcome Improvement Targets for each year:

- DY4: I-6; I-6.1
- DY5: I-8; I-8.1

Rationale:
Colorado County has a high rate of preventable hospital stays (higher than Texas and Harris County) and at least 15% of the county’s community does not receive any diabetes screening. Coupled with the high rate of obesity and inactivity in Colorado County (equal to and higher than Texas, respectively), there is good reason to believe that uncontrolled blood sugar for diabetics is a cause of the County’s high rate of potentially preventable admissions. Achieving this outcome domain will have positive effects on the health outcomes for patients and the cost of delivering health care for Rice Medical Center.
**Outcome Measure Valuation:**
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This particular project is valued as Rice’s second highest value outcome due to the importance of controlling blood sugar and preventing hospital admissions for diabetics with uncontrolled blood sugar. Hospital admissions reduce a patient’s quality of life, functionality, morale, and short- and long-term health outcomes. Additionally, they create an increased cost burden on the health care delivery system, which affects the entire community. Achieving this outcome will take considerable and concerted effort and investment in infrastructure, but the outcome will justify the expense.

Rice Medical Center
Pass 3
Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (3) patient’s rating of doctor access to specialist.

Performing Provider: Rice Medical Center

TPI: 212060201

Unique RHP Outcome ID: 212060201.3.5

Outcome Measure Description:
By implementing telemedicine in its hospital, Rice will increase its patients’ satisfaction with their and their doctors’ access to specialists. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the telemedicine program expands.

Starting Point/Baseline:
Rice currently only measures patient satisfaction based on whether the hospital meets all of a patient’s healthcare needs.

Rationale:
Colorado County is a rural community. It can be very difficult for patients to access specialists, often having to travel long distances. Likewise, it is difficult for patient’s primary care physicians to coordinate with specialists for consultation and referral from a rural community. Patient satisfaction will increase when patients have closer and more immediate access to specialty care for consultations and referrals, especially as this is expected to result in improved patient outcomes.

Project Valuation:
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice’s belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. The capability to engage in telehealth and telemedicine will allow Rice to provide a broader range of treatment and diagnostic services to its patients, removing the need for those patients to travel to urban areas to access care and allowing for quicker access to often crucial health information. The telemedicine program can continually expand as Rice is able to identify additional specialist providers to participate in the program; thus, the potential impact for the satisfaction with their access to specialty-related information, care, and appointments for patients in Rice’s community will only grow over time. According to the Region’s County Health Rankings, Colorado County has a higher rate of premature death, poor physical health days, low birth weight, and adult obesity than the statewide average. Each of these statistics can be tied to conditions requiring specialty care
that may not be available in Colorado County, supporting Rice’s initiative to increase access to needed care and decrease the burden on patients by implementing a telemedicine program. For these reasons, this outcome is of high value to the community and Rice valued the outcome accordingly.

**Total Estimated Incentive Payments for 4-Year Period (add milestone bundle amounts over Years 2-5):** $279,556
Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (5) patient’s overall health status/functional status.

Performing Provider: Rice Medical Center

TPI: 212060201

Unique RHP Outcome ID: 212060201.3.6

Outcome Measure Description:
By establishing a new primary care clinic in Walls, Texas, Rice will increase the overall health and well-being of patient populations in this community. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the primary care clinic is expanded and/or implemented.

Process milestones:

- In DY2, Rice will train staff in administering the HCAHPS to clinic patients in order to measure their level of satisfaction with their current access to primary care appointments, information, and care
- In DY3, Rice will establish a baseline of patient satisfaction scores in the Wallis clinic, in order to measure improvement going forward.

Starting Point/Baseline:

Rice is not currently measuring patients’ satisfaction with their overall health.

Rationale:

Wallis, Texas is a rural community. It can be very difficult for patients to access primary care, and they often must travel long distances to obtain simple services. Patient satisfaction and overall health will increase when patients have closer and more immediate access to primary care, especially as this is expected to result in improved patient outcomes. Patient satisfaction is important because satisfied patients are more likely to keep regular appointments with their PCPs and heed their providers’ advice.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice’s belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. Improved patient outcomes are linked to decreased costs of providing care over the long term, and the savings can be redirected into improving the overall quality and quantity of services in the local community. The residents of Wallis have no local primary care services. Wallis is located in Austin County (neighbor to
Colorado County, where Rice Medical Center is located), and its ratio of patients to primary care physicians is over 4 almost 5 times that of the statewide average (6758:1 and 1378:1, respectively). The population of Austin County, including Wallis, suffers from a higher rate of poor physical and mental health days and preventable hospitals stays than the statewide average. There is logically a connection between the paucity of primary care providers in Austin County and the high incidence of poor health in the community. Rice believes that opening a local clinic will go far towards improving the health of the Wallis community, and as a consequence improve patients’ satisfaction with their overall health/functional status. For these reasons, this outcome is of high value to the community and Rice valued the outcome accordingly.

Title of Outcome Measure (Improvement Target): IT- 2.7:

Reduce Potentially Preventable Admissions Related to Short-term Diabetes Complications

Performing Provider: Rice Medical Center

TPI: 212060201

Unique RHP Outcome ID: 212060201.3.7

Outcome Measure Description:

By establishing an urgent care clinic in its hospital facility at which non-emergent patients can seek time-sensitive care, Rice will reduce the number of Potentially Preventable Admissions for Short-Term Diabetes Complications by the end of the Waiver.

Starting Point/Baseline: Approximately 68% of patients presenting for care at Rice’s Emergency Department are not truly emergent. Many of those patients, if seen in the ED, will ultimately be admitted into the hospital. By redirecting these patients to a more appropriate care setting for treatment, Rice expects a reduction in the rate of PPAs, with specific impact targeted for diabetes short-term complications.

Rationale:

Rice currently experiences serious overutilization of its Emergency Department. This is due in large part to the lack of alternatives for urgent patients who need time-sensitive care, but not the same level of care provided by the Emergency Department. Many times when patients are admitted to the ED, they are ultimately admitted as inpatients in the hospital, especially if they do not have a PCP in the community. By providing a clearly superior alternative to the Emergency Department (and a hospital inpatient stay), this urgent care clinic project will reduce the number of PPAs in Rice’s hospital facility. With 71% of Rice’s non-emergent ED encounters being Medicaid-eligible or uninsured, and 36% of overall hospital encounters being Medicaid/uninsured, the local and regional cost of delivering care will benefit from a reduction in inappropriate ED usage and the resulting PPAs. Rice selected short-term diabetes complications because these inpatient stays are often quite costly, and can be prevented if patients are given appropriate interventions (and follow the medical advice they are given) outside of the hospital setting. It is important to reduce the rate of acute complications from diabetes, which can lead to devastating consequences like amputation, blindness, and kidney failure. Rice currently treats 535 patients who are diagnosed with diabetes, but expects that there are many more patients without a diagnosis who are suffering from complications (especially in light of the fact that 1 in 3 adults in Colorado County are obese), and could end up admitted to the hospital without more appropriate interventions like the Urgent Care Center.

Project Valuation:
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice’s belief that appropriate utilization of emergent care will result in better overall patient outcomes and quality of life, and a reduction in preventable hospital admissions for patients with chronic diseases, including diabetes. Many of the patients Rice treats each year either do not have access to clinic services in the community (due to a provider shortage, an inconvenience work schedule, or inability to travel, for example) or feel that they cannot access affordable care. These patients are often inclined to wait until their conditions worsen to the point of being emergent before seeking care and then end up admitted into the hospital, which is detrimental to their overall health, quality of life, and the systemic cost of delivering. Rice wishes to implement innovative solutions to the problems facing rural, indigent patients, and this urgent care clinic (located conveniently nearby the ED) is one way to provide patients an alternative to accessing care in the ED and risking admission into the hospital. For these reasons, this outcome is of high value to the community.

**Year 2 Estimated Milestone Bundle Amount:** (add incentive payments amounts from each milestone) $61,667

| Year 3 Estimated Milestone Bundle Amount: $61,667 | Year 4 Estimated Milestone Bundle Amount: $97,500 | Year 5 Estimated Milestone Bundle Amount: $203,500 |

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add milestone bundle amounts over Years 2-5):** $419,333
**Title of Outcome Measure (Improvement Target):** IT-6.1 Percent improvement over baseline of patient satisfaction scores: (3) patient’s rating of doctor access to specialist.

**Performing Provider:** Rice Medical Center

**TPI:** 212060201

**Unique RHP Outcome ID:** 212060201.3.8

**Outcome Measure Description:**
By adding new specialists in its hospital clinic, Rice will increase its patients’ satisfaction with their and their doctors’ access to specialists. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the specialty services expand.

**Process milestones:**

- DY2: Rice will engage in project planning in order to use the addition of local specialists to improve patients’ satisfaction with their access to specialty care physicians.
- DY3: Rice will establish a baseline measurement of patients’ satisfaction with their access and their PCP’s access to specialists, in order to measure improvement going forward.

**Starting Point/Baseline:**
Rice is not currently measuring patients’ satisfaction with their or their doctors’ access to specialists.

**Rationale:**
Colorado County is a rural community. It can be very difficult for patients to access specialists, often having to travel long distances. Likewise, it is difficult for patient’s primary care physicians to coordinate with specialists for consultation and referral from a rural community. Patient satisfaction will increase when patients have closer and more immediate access to specialty care for consultations and referrals, especially as this is expected to result in improved patient outcomes.

**Project Valuation:**
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice’s belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. The ENT is a physician able to treat a myriad of conditions and can examine and refer patients to other providers as needed. An orthopedic specialist is likewise able to diagnose and treat a myriad of conditions, ranging from chronic
conditions to severe injuries. Obesity can cause or be related to conditions appropriate for ENT or orthopedic care (i.e. snoring/sinus conditions, joint deterioration, etc.), indicating a need for these specialties in this community where obesity is especially prevalent. This is especially important because both of these specialists are trained in medicine and surgery, which most PCPs are not. Many of the people Rice treats each year through its hospital and/or clinics will benefit from the weekly availability of these providers, especially due to the high rate of obesity and poor physical health in the County. This increased access should go far to improve patients’ satisfaction with their ability to access the right care from the right provider. For these reasons, this outcome is of high value to the community and Rice assigned value to the outcome accordingly.
### Percent Improvement over Baseline of Patient Satisfaction Scores (3) patient’s rating of doctor access to specialist.

**Title of Outcome Measure (Improvement Target):** IT-6.1 Percent improvement over baseline of patient satisfaction scores: (1) patients are getting timely care, appointments, and information.

**Performing Provider:** Rice Medical Center

**TPI:** 212060201

**Unique RHP Outcome ID:** 212060201.3.9

**Outcome Measure Description:**
The outcome of Expanding the East Bernard Clinic will to improve patient satisfaction scores in the domain of timeliness of appointments, care, and information. Rice will measure patient satisfaction of the clinic’s patients using the CAHPS survey.

**Starting Point/Baseline:** Rice is not currently measuring patient satisfaction for the East Bernard Clinic. The clinic treated approximately 2800 patients in 2012.

**Rationale:** According to the Planning Protocol, “Public reporting will serve to enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment.” Rice intends to improve patient access and patients’ perception of their access in East Bernard, which Rice expects will result in improved health outcomes (as patients will engage in preventative care more readily if they feel they have adequate access).

**Project Valuation:** The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This project is valued to reflect the importance of maintaining patient satisfaction with the provision of primary healthcare so that patients will continue to participate in the system. Like the rest of Wharton County, East Bernard suffers from a higher rate of poor physical and mental health days and preventable hospital stays than the Statewide average; access to primary care may reduce these local trends, through improving the health of the community. Rice expects the increased availability of appointments for local patients to improve patients’ willingness and ability to engage in preventative medical care. Additionally, if patients have access to more appointments, they will be better acquainted with their providers and more likely to trust/follow their recommendations, which should in turn improve their satisfaction with their care. For these reasons, Rice views this outcome as high value for the community and assigned its value accordingly.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add milestone bundle amounts over Years 2-5): $559,111**
Spindletop Center

Pass 1
**Title of Outcome Measure (Improvement Target):** OD-6 Patient Satisfaction

IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores-Patients are getting timely care, appointments, and information

**Unique RHP Project identification number:** 096166602.3.1

**RHP Performing Provider / TPI:** Spindletop Center / 096166602

**Outcome Measure Description:**
For demonstration years 3-5, Spindletop has selected improvement outcome measure IT-6.1 (1), percent improvement over baseline of patient satisfaction scores, patients are getting timely care, appointments, and information. The process milestone selected for demonstration year 2 to prepare for the outcomes is P-2, establish baseline rates. This will involve developing a patient satisfaction survey for the new service to be provided and establishing the satisfaction baseline in year 2.

**Rationale:**
Since the goal of this project is to provide expanded primary care for our behavioral health clients, measuring the availability and timeliness of physical health care and appointments that meet clients’ needs is important. If clients are satisfied with the service, they will be more likely to access primary care that will lead to improved physical health.

**Outcome Measure Valuation:**
Spindletop considered several factors in valuing this project including reductions in costs associated with emergency room visits and hospitalizations for diseases and illnesses. Improving the physical health of behavioral health clients should reduce the number of ED visits and the occurrences of hospitalizations.

Another valuation factor used for this project is the monetary value for a collaborative primary/behavioral health intervention as measured by quality adjusted life-years multiplied by a life year value. This valuation methodology uses health economic studies to assign a life year value associated with the health intervention.

Title of Outcome Measure (Improvement Target): IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores-Patients getting timely healthcare information

Unique RHP outcome identification number(s): 096166602.3.2 / Pass 2
RHP Performing Provider / TPI: Spindletop Center / 096166602

Outcome Measure Description:

The process milestone selected for demonstration year 3 to prepare for the outcomes is P-1, project planning. The process milestone selected for demonstration year 3 is P-2, establish baseline rates. This will involve conducting a patient satisfaction survey for the new service to be provided and establishing the satisfaction baseline in year 3.

For demonstration years 4-5, Spindletop has selected improvement outcome measure IT-6.1, percent improvement over baseline of patient satisfaction scores-patients getting timely healthcare information.

Rationale:

Spindletop has selected improvement outcome measure IT-6.1, percent improvement over baseline of patient satisfaction scores, patients getting timely health information. One of the purposes of this project is for clients to have access to their healthcare information and learn skills that allow them to become more self-sufficient and have more control over their physical and behavioral health. The survey will be designed to produce comparable data on the patient's perspective on care that will allow objective and meaningful assessment of the program in meeting the needs of the clients. Public reporting of survey results will serve to enhance accountability in health care by increasing the transparency of the quality of care provided in return for the public investment.

Outcome Measure Valuation:

Spindletop considered several factors in valuing this project including reductions in costs associated with hospitalizations for behavioral and developmental disorders and emergency room visits. Another valuation factor used for this project is the monetary value for a collaborative primary/behavioral health intervention as measured by quality adjusted life-years multiplied by a life year value. This valuation methodology uses health economic studies to assign a life year value associated with the health intervention. Since behavioral health clients have a high incidence of severe illnesses that shorten their life spans by 25 years compared to the general public, any programs that improve their mental and physical health should increase both the length and quality of their lives.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $25,043*
St. Joseph Medical Center
Pass 1
Title of Outcome Measure (Improvement Target): IT-1.18 Follow-Up after Hospitalization for Mental Illness – NQF 0576

Unique RHP outcome identification number(s): 181706601.3.1

Outcome Measure Description:
This measure assesses the percentage of discharges for members 6 years of age and older who were hospitalized for treatment of selected mental health disorders and who had an outpatient visit, an intensive outpatient encounter or partial hospitalization with a mental health practitioner. Rate reported will be those patients with follow up visits within 30 days of discharge.

Tracking of recidivism of these patients to either the St. Joseph Behavioral inpatient or PHP program will indicate if the patient has maintained their treatment recommendations subsequent to discharge.

An indicator of patient compliance and treatment adherence is the “no show” rate. We will track the no show rate; along with a number of variables to determine success.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Targets for each year:
- DY4:
  - IT-1.18 - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
  - Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
    - 25% increase in patients receiving after hospitalization follow-up care based on current discharge data for most common diagnoses
- DY 5:
  - IT-1.18 - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
  - Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
    - 25% increase in patients receiving after hospitalization follow-up care based on DY4 discharge data for most common diagnoses identified above
**Rationale:**

Improvement Target 1 and Improvement Target 2 were chosen because: we initially need some time to pull together the community information and collect data from the community. Subsequent to that this is considered standard data for most providers and an industry standard to review regarding patient follow up visits and compliance.

This measure assesses the percentage of discharges for members 6 years of age and older who were hospitalized for treatment of selected mental health disorders and who had an outpatient visit, an intensive outpatient encounter or partial hospitalization with a mental health practitioner. Rate reported will be those patients with follow up visits within 7 and 30 days of discharge.

Tracking of recidivism of these patients to either the St. Joseph Behavioral inpatient or PHP program will indicate if the patient has maintained their treatment recommendations subsequent to discharge.

An indicator of patient compliance and treatment adherence is the “no show” rate. We will track the no show rate to determine success.

**Outcome Measure Valuation:**

Extensive analysis was performed to value this outcome measure at $1,742,432 over the four years, beginning DY2 – 5. Decrease on recidivism and the cost associated with such things as medication follow-up alone will provide enough value to the community to justify the valuation.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $3,000,000
**Title of outcome measure (improvement target):** IT-9.2 ED appropriate utilization

**Unique RHP outcome identification number(s):** 181706601.3.2

**Performing Provider name/TPI:** St. Joseph Medical Center (SJMC)/181706601

**Outcome Measure Description:**

IT-9.2 ED appropriate utilization will measure reduced Emergency Department visits for Behavioral Health/Substance Abuse target conditions at St. Joseph Medical Center.

This measure will help to identify best practices, integrate those best practices into this setting and ensure that St. Joseph’s works collaboratively with other providers in the RHP to share data and best practices to enhance the overall service delivery and outcomes within the community.

**Process Milestones:**

- DY2: P-1
- DY3: P-2

**Outcome Improvement Target(s) for each year:**

- DY4: IT-9.2 Reduce ED visits for behavioral health or substance abuse (TBD)
- DY5: IT-9.2 Reduce ED visits for behavioral health or substance abuse (TBD)

**Rationale:**

The goal is to ensure that all clients are treated in the most appropriate manner for their co-occurring mental health and medical issues. The measure selected would allow us to track if we are accomplishing this goal while also ensuring that clinically we are using the most relevant model of care for this population.

This measure was selected (9.2) to ensure that individuals that require this type of service are assessed prior to admission for appropriateness. In the case of transfers from other facilities, the team will complete the transfer (memorandum of transfer- MOT) – thus reducing this patient load from going through the emergency room process. The MOT process (nurse-to-nurse and doctor-to-doctor) will be completed by the unit staff and transfers will be accepted based upon admissions criteria determined by the physicians. Currently, any patient with a primary diagnosis of medical illnesses is routed through the emergency room and any patient with a primary psychiatric diagnosis is routed through the behavioral health building’s intake department.

Process measure P-1 and P-2 were selected to allow for time to ensure that time was allotted to prepare and develop a plan for this program. The other areas were selected to ensure that the program works collaboratively with the other RHP providers to share best practices and enhance outcomes.

**Outcome Measure Valuation:**

Extensive analysis was performed to value this outcome measure at $1,727,432 over the four years, beginning with DY2 – DY5. Benefits to the community include the increase in available
beds in the community to which patients with dual diagnoses (behavioral and medical) can be admitted. This coordinated care in the right setting will reduce readmissions, medical complication rates and overall length of stay, saving the unnecessary burdens of treating these patients.
| Year 2 (10/1/2012 – 9/30/2013) | Milestone 1 [P-1]: Process Planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

St. Luke's Episcopal Hospital
Pass 1
Title of Outcome Measure (Improvement Target): IT-3.2 Potentially Preventable Re-Admissions – 30-day Readmission Rates (PPRs)/Congestive Heart Failure 30-day Readmission Rate

Unique RHP outcome identification number: 127300503.3.1 St. Luke’s Episcopal Hospital

Outcome Measure Description:

The goal of this project is to reduce by 30% the rate of 30-day potentially preventable re-admissions for chronic heart failure (CHF) patients according to the Hospital Compare publically reported data. Currently, St. Luke’s experiences a 24.8% re-admission rate for the CHF patients, according to publicly reported data accessed at Hospital Compare. By creating a Transitional Care Clinic for the at-risk, underserved populations, these patients will gain access to timely essential care on a consistent basis. In addition, St. Luke’s will work with the St. Luke’s Episcopal Health Charities Project Safety Net to identify primary care providers within the patient’s local community. The combination of these two services will create a partnership with the patients and provide an opportunity for the patients to discuss health and social concerns. Additionally, patients will have concerns addressed on a timely basis by a care-team provider. This, in turn, will reduce the need for more costly acute, inpatient care.

Over the course of the project, the readmission rate will be reduced by 30%.

Process Milestones:
- DY 2: P-1, P-3
- DY 3: P-2

Outcome Improvement Target for each year:
- DY 4: IT-3.2 Potentially Preventable Readmission Rates - CHF
- DY 5: IT-3.2 Potentially Preventable Readmission Rates - CHF

Rationale:

The process milestones and outcome improvement target of reducing the 30-day potentially preventable re-admission rate was selected because of its impact on the overall health-status of at-risk CHF patients. The creation of a Transitional Care Clinic will provide access to consistent care for at-risk, and underserved patient populations. In addition, St. Luke’s will utilize the St. Luke’s Episcopal Health Charities Project Safety Net Portal to identify primary care providers within the patient’s local community that can serve as an additional health resource. By improving access these patients will receive high-quality care on a consistent basis, which should lead to an improved health status of each of these patients. In addition, the patients will need fewer acute, inpatient admissions and emergency department visits, which will benefit not only the patient but the community at-large by improving efficient utilization of scarce healthcare resources and reducing the overall cost of healthcare.

The data collected through more consistent visits with the at-risk and underserved populations will also lead to identification of health trends within communities and allow for better prioritization of community-health needs. This will allow for more targeted, effective interventions to be created that will improve the overall health status of the community-at-large and reduce regional health-care expenditures.
Outcome Measure Valuation:

The project scope includes all patients with an index admission of congestive heart failure at St. Luke’s Episcopal Hospital. This is anticipated to be approximately 6,000 patients. The intervention begins with education upon admission. The care team will also provide information about the services of the Transitional Care Clinic. Prior to discharge, a follow-up appointment will be scheduled within seven days for each patient. In addition, the care team providers will identify if the patient currently has consistent primary care support. If none is identified, the team will assist the patient in finding stable primary care.

All patients identified with CHF will be supported with this intervention; however, specific-focus will be given to those most at-risk, including the underserved and uninsured.

This addresses a high-priority community need due to the incidence of heart disease. The overall community will benefit by savings achieved by reducing the unnecessary and costly use of acute hospital services.

Title of Outcome Measure (Improvement Target): OD-10 Quality of Life/Functional Status
Unique RHP Outcome Identification Number: 127300503.3.2 - St. Luke’s Episcopal Hospital

Outcome Measure Description:
Quality of life (QOL) is a broad multidimensional concept that usually includes subjective evaluations of the patient’s perceptions of mental and physical indicators. Quality of life is a challenging measure in that it is subjective and dependent upon the client’s perceptions of each domain. Further, the term “quality of life” has meaning for nearly everyone and every academic discipline, individuals and groups can define it differently.

Process Milestones:
- DY 2: P-1, P-3
- DY 3: P-2

Outcome Improvement Target for each year:
- DY 4: IT-10.1 Quality of Life
- DY 5: IT-10.1 Quality of Life

Rationale:
Chronically ill patients’ QOL is a major driver to both the pursuit of medical care and adherence to medical therapy. Therefore, we find QOL is a significant indicator of the success of any disease management program.

Outcome Measure Valuation:
In the St. Luke’s Episcopal Hospital program, we will use CDC HRQOL scores to measure our social and clinical interventions. Through repeated measures of CDC HRQOL we will monitor the patient’s experience. Additionally, aggregation of CDC HRQOL data will provide an assessment of efficacy.

The evaluation of CDC HRQOL combined with the readmission rate provides a balanced set of measures to assess effectiveness of our intervention.

St. Luke's Episcopal Hospital
Pass 2
Title of Outcome Measure (Improvement Target): IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates

Unique RHP Outcome ID: 127300503.2.2 / Pass 2

Outcome Measure Description:
Potentially preventable complications of Hepatitis C include the development of cirrhosis, progressive liver failure and death. Based on estimates of prevalence within the population and the know efficacy of current therapies achieving a 60% cure rate, we plan to prevent progression to active Hepatitis C in at least 444 patients through active screening and effective intervention.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:
- DY3:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Baseline/Goal: 5%
- DY4:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Improve over baseline 10%
- DY5:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Improve over baseline 30%

Rationale:
Outcome improvement targets will determined in DY2.

Outcome Measure Valuation:
In Year 2 as partnerships are developed beyond current relationships, 2000 individuals will be screened. In Years 3 (3500) and 4 (5000) the volume of screening would increase incrementally with the expected volume of screening in Year 5 reaching 8000. As a result of the increased screenings, we would expect to identify additional individuals in the at-risk group. The expected outcome is projected as follows;

- Year 2 – 160
- Year 3 – 280
- Year 4 – 400
- Year 5 - 640

1. Total number of individuals identified with disease over project equals 1480. If approximately 50% of 1480 new patients will be engaged in active community based treatment, we would expect 60% cure rate equaling 444 patients. The lifetime cost of Hepatitis C in the absence of liver transplant is $100,000. With liver transplant, the cost rises to $280,000. Within 5 years of diagnosis, 15-20% of patients with chronic Hepatitis
C develop cirrhosis. Consequently, diagnosis, treatment and cure dramatically lower costs for treatment of a chronic disease. If the epidemiologic estimates are much more modest, assuming cure in only 10% of the potential, the likely cost savings will easily exceed $4.4 million (lifetime cost for one patient with Hepatitis C is $100,000, with liver transplant cost rises to $280,000).

Texana Center

Pass 1
Title of Outcome Measure: IT-10.2 Quality of Life/Activities of Daily Living

Unique RHP outcome identification number: 081522701.3.1

Outcome Measure Description:
This Category 3 Outcome Measure, Quality of Life, OD 10, 10.2 Activities of Daily Living assesses the effectiveness of the Texana Center Category 1 Project, Option 1.12.2, to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The desired outcome of the Category 1.12.2 Project is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for autism) by adding an additional setting. Expanding the availability of behavioral health services is consistent with the Category 3 Outcome Measure, OD 10 Quality of Life, IT-10.2 Activities of Daily Living.

Process Milestones:
The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:
- DY 2 - P-1: Completion of project planning to prepare for reporting
- DY 2 and 3 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

Outcome Improvement Target(s) for each year:
The following Category 3 Improvement Target, IT-10.2, was selected to measure the success of Texana Center’s Category 1 Project, Option 1.12.2 during DY 4 and DY 5:
- Demonstrate improvement in quality of life/activities of daily living scores as measured by evidence-based and validated assessment tool(s), for children diagnosed with Autism (standalone measure).

Rationale:
Although much of behavioral healthcare is focused on reducing psychiatric symptoms, this intensive ABA and SLP treatment is specifically designed to improve symptoms and functions, 2 essential components of quality of life. Research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA. Effective quality improvement requires relentless focus on patient outcomes. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive behavior intervention can be costly, exceeding $50,000 per year. This project will improve access to needed behavioral health services for low income families, 70-90% of the children will be Medicaid eligible.
Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 3-5 based on baseline data collected during years 2 and 3.

- Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student’s scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, & Wiley, 2007; Sullivan & Perry, 2006). The ABLLS-R was selected because it is now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, & Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Bouware, McBride, & Sandall, 2001) and, according to Aman et al. (2004), has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

Outcome Measure Valuation:

The Category 3 Outcome Measure, Quality of Life, is valued as a subset to the valuation for the Texana Center Category 1.12.2 to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The Category 1.12.2 Project, and supporting Category 3 Outcome Measures, addresses a priority need for the population of children diagnosed with autism.

This project addresses a priority need for the autism population to receive intensive ABA services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community/functional status; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.

By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve 50 children in years 2-5, with 25-40 hours per week per child of
intensive applied behavior analysis intervention. At 6 hours per day, this will be approximately 1500 hours of treatment annually per child. In 2007, Chasson et al. results indicated that the state of Texas will save $208,500 per child across eighteen years of education with early intensive ABA. Based on the figures derived from this study, the state of Texas could save $10,425,000 across 18 years of education by providing ABA treatment to these 50 children. This savings exceeds the total listed 5-year valuation for this project. In 1998, Jacobson et al. found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to age 55 per child served (Jacobson, Mulik, & Green, 1998). Therefore, based on the figures derived from this study, the state of Texas could save $121,985,500 through age 55 for these 50 children by providing early intensive ABA treatment.

Total Five Year Valuation: $1,094,789

Identifying Outcome Measure and Provider Information:

**Title of the Outcome Measure:**  IT-9.4 Other Outcome Improvement Target Unique RHP Project
**Identification Number:** 081522701.3.2
**Performing Provider Name:** Texana Center
**Texas Provider Identifier:** 081522701

**Outcome Measure Description:** OD-9 Right Care, Right Setting; IT-9.4 Other Outcome Improvement Target

**Rationale:**

Within OD – 9 Right Care, Right Setting, we have decided that IT-9.4 Other Outcome Improvement Target is the best measure to use to show true system transformation. Texana currently refers most patients to the state hospital system and has the ability to track admissions through this system. We do not have the ability to track admissions through the private sector at this time although we know the private sector also admits patients from our catchment area. Based on this, we wanted to develop a measure that would capture the true preventable admissions due to having the crisis center from both sectors. Therefore, the numerator will be based on admissions prevented due to the crisis center and the denominator will be all admissions to the crisis center. In order to determine if an admission to the crisis center prevented an inpatient admission, we will perform the same assessment the state hospital system uses to determine whether an individual meets inpatient admission criteria. The individual will then be observed for 24 hours, crisis intervention services including medications will be provided and the individual will be assessed using the same tool after 24 hours in the unit. If the individual no longer meets inpatient admission criteria, the individual will be added to the numerator as an admission that was prevented. If the individual still meets inpatient admission criteria, it will not be counted and the patient will be transferred to the state hospital system or other inpatient psychiatric facility. Our hope is to increase this percentage in each demonstration year. DY3 will be used to determine the baseline number of admissions prevented and 3% increases will be the goal for DY4 and DY5. These percentage increases are based on current admission rates at the state hospital. Since there is currently no place for individuals to go in crisis in our catchment area, we know that individuals are going into Harris county and being admitted unbeknown to us. We believe the volume of individuals that we will be seeing at the crisis center will be significantly increased from the current volume of individuals that are screened for admission simply because individuals will become aware of the crisis center and not go into Harris County seeking help. We like to refer to this as the “built it and they will come” mentality. By using the measure described above, we will be able to prove up the true impact of the crisis center in not only our community but the region.

**Outcome Measure Valuation:**

This project addresses a major need in the community—-a “place” for individuals to go other than the hospital emergency rooms and jails and to avoid inpatient stays in psychiatric hospitals. This project was valued using a medical economists’ analysis to determine average savings per acute per year care episode for individuals treated in a residential setting as opposed to a hospital. The study was completed by the UT Houston School of Public Health and the UT Austin Center for Social Work Research. Based on this analysis, the value of the program, per acute care episode is $17,504 or
$1,750,392 per 100 persons served. The study also indicates that additional cost savings may be expected. Based on this and the projected volume over three years of 1,800 persons served, the valuation for this project is $31,507,056 which is significantly more than twice the value placed on this project.

Texana Center valued this category based on the overall valuation for the project and the percentage requirements of the overall valuation for this category.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,439,902

Add additional outcomes selected by the Performing Provider; repeat tables for every provider participating in Category 1 or 2
Title of Outcome Measure (Improvement Target): 3.IT 9.4- Other Outcome Improvement Target- Mental health (IDD/SPMI or Challenging Behaviors) admissions and readmissions to state institutions (state mental hospitals and State Supported Living Centers)

Unique RHP outcome identification number: 081522701.3.3
Performing Provider Name/TPI: Texana Center / 081522701

Outcome Measure Description:
This Category 3 Outcome Measure, Right Care, Right Setting, assesses the effectiveness of the Texana Center Category 2 Project, Option 2.13.1, for the implementation of a crisis stabilization intervention for the dually diagnosed population (i.e., persons with intellectual and developmental disabilities (IDD) with a co-occurring serious and persistent mental illness (SPMI) and/or serious behavioral challenges). The desired outcome of the Category 2.13.1 Project is to prevent, for this dually diagnosed population, unnecessary use of services in criminal justice settings, emergency rooms, and state institutions (i.e., mental hospitals and State Supported Living Centers). Prevention of services in these more restrictive settings is consistent with the Category 3 Outcome Measure, Right Care, Right Setting.

As a solution to the cyclic pattern of long term support and acute crisis intervention for the dually diagnosed IDD/SPMI population, the Texana Center Category 2.13.1 Project proposes the development of a crisis behavioral healthcare team, expanded out-of-home respite care to respond to acute behavior crisis events, and on-going supports to avert crisis and establish stable living environments. The selection of this Outcome, Right Care, Right Setting, is consistent with community needs assessment (RHP 3: CN2), which identified insufficient access to behavioral health care services resulting in delivery of inappropriate care (e.g., emergency departments or state institutional care) and increased demand on the criminal justice system.

Process Milestones:
The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:
- DY 2 - P-1: Completion of project planning to prepare for reporting
- DY 2 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement processes for data and reporting

Outcome Improvement Target(s) for each year:
The following Category 3 Improvement Target is selected to measure the success of Texana Center’s crisis stabilization interventions for the dually diagnosed IDD/SPMI population (Category 2 Project, Option 2.13.1) during DY 4 and DY 5:
- Decrease in admissions and readmissions to state facilities (state hospitals and State Supported Living Centers) for the dually diagnosed IDD/SPMI population

Rationale:
Currently, data for tracking individuals with IDD/SPMI seeking crisis interventions is across multiple agencies, multiple data systems and varied reporting requirements. The data is present, but not in an easily accessed and meaningful reporting format. The Category 3 process milestones will allow for planning and the development of systems for identifying, accessing,
analyzing and disseminating data that will be used to report progress for the above improvement targets in DY 4 and DY 5. Additionally, once the data sources are in place, a baseline will be determined in order to measure improvement from the project’s starting point. Consistent with the regional goal for developing a culture of ongoing transformation and innovation, a continuous quality improvement milestone is included in the Category 3 process measures.

When responding to individuals with IDD/SPMI or challenging behaviors in crisis, Texana Center, as the Local ID Authority, may assist the individual with limited emergency respite, admission to a state facility, admission to an ICF/ID facility, or admission to a State Supported Living Center. These options are further limited by resources (funding) and bed availability. When the crisis is one of pending criminal charges, Texana Center is challenged to help the individual avoid further involvement in the criminal justice system. The intent of the Category 2 Project is to provide the option of emergency behavior supports and out of home respite as ‘right care, right setting’ alternative. Consider the following reasons for Texana Center selecting these Category 3 Improvement Targets to support the crisis stabilization interventions for this targeted population:

- Decrease in admissions and readmissions to state facilities (state hospitals and State Supported Living Centers) for the dually diagnosed IDD/SPMI population
  - Current state and federal initiatives, including community living options supported by the 1999 Olmstead decision, are based on evidence that patient-centered care in the most cost-effective manner is in non-institutional settings.

**Outcome Measure Valuation:**

The Category 3 Outcome Measure, *Right Care, Right Setting*, is valued as a subset to the valuation for the Texana Center Category 2.13.1 Project for the implementation of a crisis stabilization intervention for the dually diagnosed population (i.e., persons with intellectual and developmental disabilities (IDD) with a co-occurring serious and persistent mental illness (SPMI) and/or serious behavioral challenges). The Category 2.13.1 Project, and supporting Category 3 Outcome Measures, addresses a priority need for the IDD/SPMI population to receive the right care (intensive crisis stabilization services) in the right setting (their home and community). By doing so, it also allows for cost avoidance, supporting individuals in the community at a lesser cost than institutional care in state hospitals and State Supported Living Centers, and avoiding costs in the criminal justice system and emergency rooms.

Category 2.13.1 Project, and supporting Category 3 Outcome Measures, was valued based on two studies completed by the UT Houston School of Public Health and the UT Austin Center for Social Work Research: “Valuing the Program to Create an Assertive Community Treatment (ACT) Team for People with Intellectual and Developmental Disabilities (IDD)” and “Valuing the Crisis Respite for Children Program”. These studies were completed through a contract with Center for Health Care Services, and were based on cost-utility analysis measures and quality-adjusted life-years analysis.

For DY 2, the processes in Category 3 will be completed concurrently with those in Category 2, and the value for these activities is in Category 2 only. For DY 3, the processes in Category 3 were considered to be 10% of the value of the Category 2.13.1 Project. For DY 4, the Improvement Targets in Category 3 were considered to be 10% of the value of Category 2.13.1 Project. For DY 5, the Improvement Targets in Category 3 were considered to be 20% of the value of Category 2.13.1

**Total Five Year Valuation:** $670,170

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $670,170
Texana Center
Pass 2
Title of Outcome Measure (Improvement Target) IT-11.1 Improvement in clinical indicator in identified disparity group.

Unique RHP Outcome ID: 081522701.3.4 / Pass 2

Performing Provider / TPI: Texana Center / 081522701

Outcome Measure Description:

This Category 3 Outcome Measure, Potentially Preventable Admissions, OD-11, IT-11.1 assesses the effectiveness of the Texana Center Category 1 Project, Option 1.9.2, to establish or expand initiatives to increase the availability of targeted specialty care providers for infants and toddlers 0-3 years old who exhibit mild developmental delays or have a recognized risk factor that puts them at risk of developmental delay. The desired outcome of the Category 1.9.2 project is to minimize the impact of established risk factors on developmental progress and/or to enable children with developmental delays achieve a functional status at, or near, age appropriate levels, decreasing or eliminating potential eligibility for IDEA Part B special education services. Expanding access to specialty care (OT, PT, ST, behavior analysis/therapy) is consistent with the Category 3 Outcome Measure, Potentially Preventable Admission.

The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 3,4, and 5:

- DY 2 - P-1: Completion of project planning to prepare for reporting
- DY 2 and 3 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

The following Category 3 Improvement Target, IT-11.1, was selected to measure the success of Texana Center’s Category 1 Project, Option 1.9.2 during DY 4 and 5.

- Demonstrate developmental functioning at, or approaching, age expectations as evidenced by scores on a standardized, evidence-based and validated assessment tool.

Rationale:

In 2010–11, children with delays or disabilities who received (therapeutic) services...showed greater than expected developmental progress. Many children exited the program functioning within age expectations, and almost all made progress. Comparison of entry and exit scores will evaluate the effectiveness of therapeutic interventions for each individual child.

School districts administer standardized tests to determine eligibility for special education services for children not having other eligibility determinations. Examination of exit scores will

---

1 Early Childhood Outcomes Center, July 2012
2 It's a New Idea, the manual for parents and students about special education services in Texas. The ARC of Texas; Advocacy, Incorporated. 2007.
provide a reliable indicator of potential eligibility for special education services and measure progress toward the project goal of increasing school readiness and decreasing the need for special education services at age 3.

Data collected in DY 2 and 3 on entry and exit test scores will establish a baseline on which to base improvement targets to be implemented in DY 4.

- This project proposes to use the Battelle Developmental Inventory 2nd Edition (BDI-2) to establish eligibility for enrollment and an individual baseline score on each child on entry into services. The developmental test will be administered a second time prior to exiting services. The BDI-2 provides a measure of progress during the preschool years and has been designed to help assess the effects of various intervention strategies for individual children and for groups of children.3
- Data collected will be categorized using criteria established by the Early Childhood Outcomes Center to measure progress toward established goals:
  - Maintained typical development
  - Achieved typical development
  - Made sufficient progress to move closer to typical development but did not achieve it
  - Made progress but did not move closer to typical development
  - Did not make progress4

**Outcome Measure Valuation:**

The Category 3 Outcome Measure, Improvement in clinical indicator in identified disparity group, is valued as a subset to the valuation for the Texana Center Category 1.9.2 to expand access to specialty care (OT, PT, ST) to infants and toddlers. The Category 1.9.2 Project, and supporting Category 3 Outcome Measures, address a priority need for the population of children with mild to moderate developmental delay or with established risk factors for delay.

One of the goals of this project is to avert outcomes such as potentially avoidable special education services and to promote independence in the community. The vision will be realized throughout the child's lifetime, however, the reduction in the need for special education for children served in this project would be realized during the 4 year DSRIP project.

Texana Center
Pass 3
**Title of Outcome Measure:** IT-10.2 Quality of Life/ Activities of Daily Living

**Unique RHP outcome identification number:** 081522701.3.5

**Outcome Measure Description:**
This Category 3 Outcome Measure, *Quality of Life, OD 10, IT-10.2* assesses the effectiveness of the Texana Center Category 1 Project, Option 1.12.2, to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The desired outcome of the Category 1.12.2 Project is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for autism) by adding one additional setting (a third setting to the original setting and Waiver pass 1 proposed setting). Expanding the availability of behavioral health services is consistent with the Category 3 Outcome Measure, OD 10 *Quality of Life, IT-10.2 Activities of Daily Living.*

**Process Milestones:**
The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:
- DY 2 and DY 3 - P-1: Completion of project planning to prepare for reporting
- DY 3 and 4 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 and 4 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

**Outcome Improvement Target(s) for each year:**
The following Category 3 Improvement Target, IT-10.2, was selected to measure the success of Texana Center’s Category 1 Project, Option 1.12.2 during DY 4 and DY 5:
- Demonstrate improvement in quality of life/activities of daily living scores as measured by evidence-based and validated assessment tool(s), for children diagnosed with Autism (standalone measure).

**Rationale:**
Although much of behavioral healthcare is focused on reducing psychiatric symptoms, this intensive ABA and SLP treatment is specifically designed to improve symptoms and functions, 2 essential components of quality of life. Research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA. Effective quality improvement requires relentless focus on patient outcomes. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive behavior intervention can be costly, exceeding $50,000 per year per child. This project will improve access to needed behavioral health services for low income families, 70-90% of the children will be Medicaid eligible.
Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 4-5 based on baseline data collected during years 3 and 4.

- Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student’s scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, & Wiley, 2007; Sullivan & Perry, 2006). The ABLLS-R was selected because it is now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, &Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Boulware, McBride, &Sandall, 2001) and, according to Aman et al. (2004), has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

**Outcome Measure Valuation:**

The Category 3 Outcome Measure, *Quality of Life*, is valued as a subset to the valuation for the Texana Center Category 1.12.2 to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The Category 1.12.2 Project, and supporting Category 3 Outcome Measures, addresses a priority need for the population of children diagnosed with autism.

This project addresses a priority need for the autism population to receive intensive ABA services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community/functional status; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.

By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve 26 children in years 3-5, with 25-40 hours per week per child of
intensive applied behavior analysis intervention. At 6 hours per day this will be approximately 1,500 hours of treatment annually per child. In 2007, results of a study by Chasson et al. indicated that the state of Texas will save $208,500 per child across eighteen years of education with early intensive ABA. Based on the figures derived from this study, the state of Texas could save $5,421,000 across 18 years of education by providing ABA treatment to these 26 children. This savings exceeds the total listed five year valuation for this project. In 1998, Jacobson et al. found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to age 55 per child served (Jacobson, Mulik, & Green, 1998). Therefore, based on the figures derived from this study, the state of Texas could save $63,432,460 through age 55 for these 20 children by providing early intensive ABA treatment.

**Total Five Year Valuation: $541,379**

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $541,379
Texas Children's Hospital
Pass 1
**Title of Outcome Measure (Improvement Target):** OD-5: Cost of Care

**Unique RHP outcome identification number:** 139135109.3.1/Texas Children’s Hospital

**Outcome Measure Description:**

OD-5: Cost of Care  
IT-5.1 Improved cost savings Cost Effectiveness Analysis

**Process milestone:**

- DY 2 P-1; P-3  
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**

- DY 4 IT-5.1;  
- DY 5 IT-5.1

**Rationale:**

Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. [http://www.ahrq.gov/research/findings/factsheets/costeff.html](http://www.ahrq.gov/research/findings/factsheets/costeff.html))

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utilize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our
patient-centered care resources. The goal is to establish evidence-based, structured approaches to various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:**
All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.\(^3\)

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $535,098*
**Title of Outcome Measure (Improvement Target):** OD-5: Cost of Care

**Unique RHP outcome identification number:** 139135109.3.2/Texas Children’s Hospital

**Outcome Measure Description:**
- OD-5: Cost of Care
- IT-5.2 Per Episode of Care

**Process milestone:**
- DY 2 P-1; P-3
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**
- DY 4 IT-5.2;
- DY 5 IT-5.2

**Rationale:**
Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:**
All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We

---

used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\textsuperscript{2} The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.\textsuperscript{3}

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.3/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.3 Length of Stay

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3;
DY 5 IT-5.3

Rationale:
Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

Outcome Measure Valuation:
All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that

QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.4/Texas Children’s Hospital

Outcome Measure Description:
OD 5 - Cost of Care
   IT-5.1 Improved cost savings: Cost Effectiveness Analysis

Process milestone:
   DY 2 P-1; P-3
   DY 3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-5.1;
   DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utilize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.³

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utlize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**Title of Outcome Measure (Improvement Target):** OD-5: Cost of Care

**Unique RHP outcome identification number:** 139135109.3.8/Texas Children’s Hospital

**Outcome Measure Description:**
OD-5: Cost of Care  
IT-5.2 Per Episode of Care

**Process milestone:**
DY 2 P-1; P-3  
DY3 P-4; P-5

**Outcome Improvement Targets for each year:**
DY 4 IT-5.2;  
DY 5 IT-5.2

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

(“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.9/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.3 Length of Stay

Process milestone:
DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3;
DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is

used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $272,441.25
Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.13/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.1 Improved cost savings: Cost Effectiveness

Process milestone:
  DY 2 P-1; P-3
  DY3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT-5.1;
  DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utilize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. ¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population. ² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $268,931.75*
Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.14/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.2 Per Episode of Care

Process milestone:
  DY 2 P-1; P-3
  DY 3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT-5.2;
  DY 5 IT-5.2

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year.

---

(“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

OD-5: Cost of Care  
IT-5.3 Length of Stay

**Process milestone:**
- DY 2 P-1; P-3
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**
- DY 4 IT-5.3;
- DY 5 IT-5.3

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in

- DY 5 IT-5.3

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. We agree that increased access should be coupled with controlling unnecessary costs, especially, if these costs are associated with an unplanned reoperation of a child.

The Joint Commission on Accreditation of Health Care Organizations (JCAHO) has suggested that unplanned reoperations could be tracked as a “screening tool” for quality assurance. A current research article published by a team of surgeons at Dartmouth-Hitchcock Medical Center, the Veteran’s Affairs Quality Group, the department of Surgery at Dartmouth Medical School and the Department of Veteran Affairs entitled, “Is Unplanned Return to the Operating Room a Useful Quality Indicator in General Surgery?” recommends that unplanned reoperations have important implications for patients – not only their health outcomes but also their safety and overall satisfaction with the care they receive. Regarding patient safety, an unplanned reoperation may result in a higher mortality and, “… certain patient-related and procedure-related factors increase risk.”

In the research, it was acknowledged that unplanned surgeries are obviously, not the choice of a patient or family member and that such events are usually isolated incidents. However, as a leader in providing regional access to tertiary and quaternary services to children, we must constantly strive to provide care that is effective and safe. As we measure our access to
subspecialty surgical services, we hope to establish quality of care models for our pediatric patients that provide a high rate of return. We believe that tracking unplanned reoperations will greatly assist us in these efforts.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $306,195.25*
Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.19/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
   IT-5.1 Improved cost savings: Cost Effectiveness

Process milestone:
   DY 2 P-1; P-3
   DY 3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-5.1;
   DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utlize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYS 2-5): $787,598.25*
Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.20/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
   IT-5.2 Per episode of care

Process milestone:
   DY 2 P-1; P-3
   DY3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT5.2
   DY 5 IT-5.2

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim - improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

(“QALY”) per year and a percentage of that QALY for the pediatric population.\textsuperscript{2} The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.21/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.3 Length of stay

Process milestone:
DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3
DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $787,598.25*
Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.22/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.1 Improved cost savings: Cost Effectiveness

Process milestone:
   DY 2 P-1; P-3
   DY 3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-5.1
   DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utlize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.\(^3\)

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5)*: $535,098
**Title of Outcome Measure (Improvement Target):** Cost of Care

**Unique RHP outcome identification number:** 139135109.3.23/Texas Children’s Hospital

**Outcome Measure Description:** OD-5: Cost of Care
IT-5.2 Per Episode of Care

**Process milestone:**
- DY 2 P-1; P-3
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**
- DY 4 IT5.2
- DY 5 IT-5.2

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

---

(“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.

Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.24/Texas Children’s Hospital

Outcome Measure Description: OD-5: Cost of Care
IT-5.3 Length of Stay

Process milestone:
  DY 2 P-1; P-3
  DY3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT-5.3;
  DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (‘QALY’”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality

of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.³

Title of Outcome Measure (Improvement Target): OD-10 Quality Of Life/ Functional Status
IT-10.1 Quality of Life

Unique RHP outcome identification number: 139135109.3.25/Texas Children’s Hospital

Outcome Measure Description:
OD-10 Quality Of Life/ Functional Status
IT-10.1 Quality of Life

Process milestone:
  DY 2 P-1; P-3
  DY3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT- Increase patient visits by 5% from baseline
  DY 5 IT- Increase patient visits by 10% from baseline

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor patient access for the specific population within Texas Children’s Hospital system. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

Child abuse has long term effects for the child including psychological and somatic symptoms, as well as psychiatric and medical diagnoses. The Adverse Childhood Experiences (ACE) Study conducted in collaboration between the Center for Disease Control and Kaiser Permanente in San Diego, CA, is one of the largest investigations to look at the relationship between child maltreatment and long term effects. The study found a strong relationship between the level of traumatic stress in childhood and poor physical, mental and behavioral outcomes later in life. The identification and intervention by child abuse abuse pediatricians and supporting staff can be crucial to the child’s well being and the prevention of further abuse. Ensuring an accurate diagnosis of child abuse, appropriate treatment and follow-up care has direct impact on the child’s quality of life.

Given the limited availability of Child Abuse Pediatricians, loss of providers could prevent TCH from reaching target as replacement providers often take multiple years to recruit.

---

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.

Outcome Measure Description:
OD- 10 Quality of Life/ Functional Status
IT-10.1 Quality of Life

Process milestone:
   DY 2 P-1; P-3
   DY3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-10.1
   DY 5 IT- 10.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the quality of life for the specific population of Developmental Pediatrics within Texas Children’s Hospital system. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. Given the national shortage of Developmental Pediatricians, loss of providers could prevent TCH from reaching target as replacement providers often take multiple years to recruit.

Measuring Quality of Life metrics enables providers and patient families to better dialogue and improve health care delivery. Analyzing these QALY measures, empowers the health care community to develop new strategies about how children of diverse abilities are served and to improve multidisciplinary health care teams communication regarding a patient. Likewise, measuring QALY’s provides a useful tool for parents, siblings and other family that care for and nurture this child/patient such as information on expected developmental, physical and emotional outcomes. This information can be used to spur more dialogue with family and their providers regarding care decisions or challenges in care compliance and how to successfully resolve these issues in a coordinated agreed upon manner.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an

increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

- DY 4 IT-5.1
- DY 5 IT-5.1

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utilize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $230,732.25*
Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.28/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.2 Per Episode of Care

Process milestone:
DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.2;
DY 5 IT-5.2

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline costs, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

(“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYS 2-5): $230,732.25

**Regional Healthcare Partnership Plan**

**Region 3**
Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.29/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.3 Length of Stay

Process milestone:
DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3;
DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

We have specifically identified reduction in Length of Stay as one of our quality outcomes as this measure has the highest resource consumption for a patient (barring any complications due to comorbidities or severity of illness). We hope to demonstrate that a reduction in length of stay allows for a better use of existing resources and hospital capacity, thus enabling us to serve more patients in less time currently required. Ultimately, this not only improves costs but also patient satisfaction in the care provided. Because we are caring for children, this is of utmost importance – to not keep the child away from his or her home for any unnecessary length of time due to inefficiencies in care delivery and coordination of discharge.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is

used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $230,732.25*
Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.30/Texas Children’s Hospital

Outcome Measure Description:
OD-5: Cost of Care
IT-5.1 Improved cost savings:

Process milestone:
  DY 2 P-1; P-3
  DY 3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT-5.1
  DY 5 IT-5.1

Rationale:
Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY 4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY 3. The baseline cost, whether high or low, will dictate an appropriate improvement target goal.

“The central purpose of cost-effectiveness analysis (CEA) is to compare the costs and the values of different health care interventions in creating better health and longer life. Many new medical devices, procedures, diagnostic tests, and prescription drugs are expensive; cost-effectiveness analysis can help to evaluate whether the improvement in health care outcomes justifies the expenditures relative to other choices.” (Focus on Cost-Effectiveness Analysis at AHRQ: Fact Sheet. August 2001. Agency for Healthcare Research and Quality, Rockville, MD. http://www.ahrq.gov/research/findings/factsheets/costeff.html)

Cost effectiveness studies empower policy makers, hospital administrators, care providers and patients in prioritizing where finite health care dollars should be spent and what evidence-based protocols, medicines, technology and equipment should be combined in response to a population’s most compelling health need. In our project, this population is chronically ill children.

We hope to utilize the Center for Clinic Effectiveness at Baylor College of Medicine and Texas Children’s Hospital in coordinating many of our quality studies for the Waiver. Specifically, the Center is developing “score cards” of various chronic disease care models to improve our patient-centered care resources. The goal is to establish evidence-based, structured approaches to
various clinical procedures while simultaneously reducing variation in clinical practice and improve clinical and health outcomes.

We recognize that while we are increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Regional Healthcare Partnership Plan

Region 3
Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.32/Texas Children’s Hospital

Outcome Measure Description:
IT-5.3 (Other Outcome Improvement Target) Reduce Unplanned Re-operations

Process milestone:

DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:

DY 4 IT-5.3
DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. We agree that increased access should be coupled with controlling unnecessary costs especially, if these costs are associated with an unplanned reoperation of a child.

The Joint Commission on Accreditation of Health Care Organizations (JCAHO) has suggested that unplanned reoperations could be tracked as a “screening tool” for quality assurance. A current research article published by a team of surgeons at Dartmouth-Hitchcock Medical Center, the Veteran’s Affairs Quality Group, the department of Surgery at Dartmouth Medical School and the Department of Veteran Affairs entitled, “Is Unplanned Return to the Operating Room a Useful Quality Indicator in General Surgery?” recommends that unplanned reoperations have important implications for patients – not only their health outcomes but also their safety and overall satisfaction with the care they receive. Regarding patient safety, an unplanned reoperation may result in a higher mortality and, “… certain patient-related and procedure-related factors increase risk.”

In the research, it was acknowledged that unplanned surgeries are obviously, not the choice of a patient or family member and that such events are usually isolated incidents. However, as a leader in providing regional access to tertiary and quaternary services to children, we must constantly strive to provide care that is effective and safe. As we measure our access to
subspecialty surgical services, we hope to establish quality of care models for our pediatric patients that provide a high rate of return. We believe that tracking unplanned reoperations will greatly assist us in these efforts.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

#### Process Milestone 1 [P-1]: Project Planning
- Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- Data Source: EHR/Business Intelligence
- Process Milestone 1 Estimated Incentive Payment *(maximum amount)*: $14,099.25

#### Process Milestone 2 [P-3]: Test Data System
- Data Source: Enterprise Data Warehouse reports
- Process Milestone 2 Estimated Incentive Payment: $14,099.25

#### Process Milestone 3 [P-4]: Conduct PDSA by subspecialty clinic
- Data Source: Advanced Quality Improvement (AQI) projects
- Process Milestone 3 Estimated Incentive Payment: $16,343

#### Process Milestone 4 [P-5]: Disseminate findings, including lessons learned and best practices, to stakeholders
- Data Source: Reports and participation in learning collaboratives
- Process Milestone 4 Estimated Incentive Payment: $16,343

#### Outcome Improvement Target 3 [IT-5.3]: Reduce Unplanned Reoperations
- Improvement Target: Track and/or reduce unplanned re-operations
- Improvement Target: Determine a specific high acuity or high complexity procedure that required re-operation and design a clinical and quality course of action to prevent, not increase or reduce this outcome over time.
- Numerator: # of unplanned reoperations identified by acuity or complexity
- Denominator: Total # of operations by identified high acuity or high complexity procedure
- Data Source: EPIC Medical Record Enterprise Data Warehouse (contains clinical and financial data for integrated system), database created by newly hired Outcomes research nurse.
- Outcome Improvement Target 3 Estimated Incentive Payment: $52,449.25

#### Outcome Improvement Target 3 [IT-5.3] Reduce Unplanned Reoperations
- Improvement Target: Reduce unplanned re-operation
- Improvement Target: determine a specific high acuity or high complexity procedure that required re-operation and design a clinical and quality course of action to prevent or reduce this outcome
- Numerator: # of unplanned reoperations identified by acuity or complexity
- Denominator: Total # of operations by identified high acuity or high complexity procedure
- Data Source: EPIC Medical Record Enterprise Data Warehouse (contains clinical and financial data for integrated system), database created by newly hired Outcomes research nurse.
- Outcome Improvement Target 3 Estimated Incentive Payment: $125,422

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $238,755.75
Title of Outcome Measure (Improvement Target): O-D5: Cost of Care

Unique RHP outcome identification number: 139135109.3.33/Texas Children’s Hospital

Outcome Measure Description: OD-5: Cost of Care
   IT-5.1 Improved cost savings

Process milestone:
   DY 2 P-1; P-3
   DY3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-5.1;
   DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, and there is only a finite amount of money to fund critical programs. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet these same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): OD5-Cost of Care

Unique RHP outcome identification number: 139135109.3.38/Texas Children’s Hospital

Outcome Measure Description: Cost of Care
IT-5.3 (Other Outcome Improvement Target) Reduce Unplanned Re-operations

Process milestone:
- DY 2 P-1; P-3
- DY3 P-4; P-5

Outcome Improvement Targets for each year:
- DY 4 IT-5.3;
- DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. We agree that increased access should be coupled with controlling unnecessary costs especially, if these costs are associated with an unplanned reoperation of a child.

The Joint Commission on Accreditation of Health Care Organizations (JCAHO) has suggested that unplanned reoperations could be tracked as a “screening tool” for quality assurance. A current research article published by a team of surgeons at Dartmouth-Hitchcock Medical Center, the Veteran’s Affairs Quality Group, the department of Surgery at Dartmouth Medical School and the Department of Veteran Affairs entitled, “Is Unplanned Return to the Operating Room a Useful Quality Indicator in General Surgery?” recommends that unplanned reoperations have important implications for patients – not only their health outcomes but also their safety and overall satisfaction with the care they receive. Regarding patient safety, an unplanned reoperation may result in a higher mortality and, “… certain patient-related and procedure-related factors increase risk.”

In the research, it was acknowledged that unplanned surgeries are obviously, not the choice of a patient or family member and that such events are usually isolated incidents. However, as a leader in providing regional access to tertiary and quaternary services to children, we must constantly strive to provide care that is effective and safe. As we measure our access to subspecialty surgical services, we hope to establish quality of care models for our pediatric patients that
provide a high rate of return. We believe that tracking unplanned reoperations will greatly assist us in these efforts.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.40/Texas Children’s Hospital

Outcome Measure Description: OD-5: Cost of Care
   IT-5.2 Per Episode of Care

Process milestone:
   DY 2 P-1; P-3
   DY3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT-5.2;
   DY 5 IT-5.2

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline cost, whether high or low, will dictate an appropriate improvement target goal.

We agree with the TX HHSC DSRIP project’s goals of this waiver specific to cost of care. Our project will strive to develop better and more robust cost-of-care measures to help those who receive care, provide care and pay for care understand how pediatric providers, especially, pediatric subspecialists, use resources and compare these costs to local, regional or national benchmarks when available.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is a only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

(“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is a only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. We agree that increased access should be coupled with controlling unnecessary costs especially, if these costs are associated with an unplanned reoperation of a child.

The Joint Commission on Accreditation of Health Care Organizations (JCAHO) has suggested that unplanned reoperations could be tracked as a “screening tool” for quality assurance. A current research article published by a team of surgeons at Dartmouth-Hitchcock Medical Center, the Veteran’s Affairs Quality Group, the department of Surgery at Dartmouth Medical School and the Department of Veteran Affairs entitled, “Is Unplanned Return to the Operating Room a Useful Quality Indicator in General Surgery?” recommends that unplanned reoperations have important implications for patients – not only their health outcomes but also their safety and overall satisfaction with the care they receive. Regarding patient safety, an unplanned reoperation may result in a higher mortality and, “… certain patient-related and procedure-related factors increase risk.”

In the research, it was acknowledged that unplanned surgeries are obviously, not the choice of a patient or family member and that such events are usually isolated incidents. However, as a leader in providing regional access to tertiary and quaternary services to children, we must constantly strive to provide care that is effective and safe. As we measure our access to subspecialty surgical services, we hope to establish quality of care models for our pediatric patients that
provide a high rate of return. We believe that tracking unplanned reoperations will greatly assist us in these efforts.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $267,939
**Title of Outcome Measure (Improvement Target):** OD-10 Quality of Life/Functional Status;

**Unique RHP outcome identification number:** 139135109.3.42/Texas Children’s Hospital

**Outcome Measure Description:**
OD-10 Quality of Life/Functional Status

**IT-10.1 Quality of Life**

**Process milestone:**
- DY 2 P-1; P-3
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**
- DY 4 IT 1.1; IT 10.1
- DY 5 IT 1.1; IT 10.1

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the access to care and quality of life for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline third next available appointment and baseline initial score on the Edinburgh Postnatal Depression Scale for quality of life for this population. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline third next available metric is set in DY3. We will aim for a post-treatment score of 13 on the Edinburgh Postnatal Depression Scale as the improvement target for quality of life. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is an only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is

---

used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

### Year 2 (10/1/2012 – 9/30/2013)

**Process Milestone 1 [P-1] Project Planning** – Engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

- Data Source: EHR/Business Intelligence

**Process Milestone 1 Estimated Incentive Payment (maximum amount):** $15,797.25

**Process Milestone 2 [P-3]: Test Data System**

- Data Source: Enterprise Data Warehouse reports

**Process Milestone 2 Estimated Incentive Payment:** $15,797.25

### Year 3 (10/1/2013 – 9/30/2014)

**Process Milestone 3 [P-4] Conduct PDSA by subspecialty clinic**

- Data Source: Advanced Quality Improvement (AQI) projects

**Process Milestone 3 Estimated Incentive Payment:** $18,313.75

**Process Milestone 4 [P-5]:** Disseminate findings, including lessons learned and best practices, to stakeholders

- Data Source: Reports and participation in learning collaboratives

**Process Milestone 4 Estimated Incentive Payment:** $18,313.75

### Year 4 (10/1/2014 – 9/30/2015)

**Outcome Improvement Target [IT 10.1] Quality of Life**

a. Demonstrate improvement in quality of life (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.

b. Data Source: Edinburgh Postnatal Depression Scale

**Goal:** Decrease score to 13 on EPDS tool upon discharge of treatment.

**Estimated Incentive Payment:** $58,774.50

### Year 5 (10/1/2015 – 9/30/2016)

**Outcome Improvement Target [IT 10.1] Quality of Life**

a. Demonstrate improvement in quality of life (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.

b. Data Source: Edinburgh Postnatal Depression Scale

**Goal:** Decrease score to 13 on EPDS tool upon discharge of treatment.

**Estimated Incentive Payment:** $140,547.50

### Year 2 Estimated Outcome Amount:

(Add incentive payments amounts from each milestone/outcome improvement target): $31,594.50

### Year 3 Estimated Outcome Amount:

$36,627.50

### Year 4 Estimated Outcome Amount:

$58,774.50

### Year 5 Estimated Outcome Amount:

$140,547.50

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (Add outcome amounts over DYs 2-5): $267,548.50
Title of Outcome Measure (Improvement Target): Patient Satisfaction

Unique RHP outcome identification number: 139135109.3.43/Texas Children’s Hospital

Outcome Measure Description: Patient Satisfaction
IT-6.1 Improved patient satisfaction

Process milestone:
DY 2 P-1; P-3
DY 3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-6.1
DY 5 IT-6.1

Rationale: Our project will increase appropriate access to patient centered coordinated care. Increased access to appropriate care leads to better long term outcomes in children and reduction in unnecessary health care costs.\(^1\) This population will still need to be hospitalized but we believe that through appropriate access and care coordination we will be able to reduce the cost of care.

Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

The value of this project can be measured with access, population management and overall quality of life. This initiative will dramatically impact the lives of 100% of the special needs population projected to be over 10,000 in greater Houston. The care coordination services include: medical, surgical, inpatient, outpatient, social economic, job placement, insurance counseling coverage, case management, social worker, educational training and engagement of local and national advocacy groups.

TCH engaged in a partnership with Press Ganey in late 2011. The surveys administered by Press Ganey are developed using accepted scientific methodology for survey design. The approach includes conducting focus groups of providers and administrators, reviewing surveys from health care facilities across the country, reviewing current professional and scientific publications on health care delivery, and utilizing the latest research on survey statistics and design. Press Ganey

allows us to benchmark against other institutions with similar demographics in order to enhance the quality of care we provide to our patients and families.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^2\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.\(^3\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $1,493,716
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number: 139135109.3.44/Texas Children’s Hospital

Outcome Measure Description:
OD-1 Primary Care and Chronic Disease Management
IT-1.1 Third next available appointment

Process milestone:
   - DY 2 P-1; P-3
   - DY3 P-4; P-5

Outcome Improvement Targets for each year:
   - DY 4 IT 1.1
   - DY 5 IT 1.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor access to care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 2 we will establish a baseline third next available appointment for this population. Because of the continued growth and demand for patient care services, the outcome measure of third next available appointment must be coupled and considered with the metric of patient visit volume growth compared to baseline to truly measure patient access. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline third next available metric is set in DY2. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is an only a finite amount of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits. Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $268,931.75
**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Unique RHP outcome identification number:** 139135109.3.49/Texas Children’s Hospital

**Outcome Measure Description:**
OD-1 Primary Care and Chronic Disease Management

IT-1.1 Third next available appointment

**Process milestone:**
- DY 2 P-1; P-3
- DY 3 P-4; P-5

**Outcome Improvement Targets for each year:**
- DY 4 IT 1.1
- DY 5 IT 1.1

**Rationale:** Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor access to care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 2 we will establish a baseline third next available appointment for this population. Because of the continued growth and demand for patient care services, the outcome measure of third next available appointment must be coupled and considered with the metric of patient visit volume growth compared to baseline to truly measure patient access. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline third next available metric is set in DY2. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is an only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

**Outcome Measure Valuation:** All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.² The QALY is

---

used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

**Regional Healthcare Partnership Plan**

**Region 3**
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number: 139135109.3.55/Texas Children’s Hospital

Outcome Measure Description:
OD-1 Primary Care and Chronic Disease Management

IT-1.1 Third next available appointment

Process milestone:
  DY 2 P-1; P-3
  DY 3 P-4; P-5

Outcome Improvement Targets for each year:
  DY 4 IT 1.1
  DY 5 IT 1.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor access to care for this population. P-1 and P-3 must be approached in DY 2 and DY 3. In DY 2 we will establish a baseline third next available appointment for this population. Because of the continued growth and demand for patient care services, the outcome measure of third next available appointment must be coupled and considered with the metric of patient visit volume growth compared to baseline to truly measure patient access. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline third next available metric is set in DY2. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is an only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is

used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5): $267,939
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number: 139135109.3.57

Outcome Measure Description:
OD-1 Primary Care and Chronic Disease Management

IT-1.1 Third next available appointment

Process milestone:
   DY 2 P-1; P-3
   DY3 P-4; P-5

Outcome Improvement Targets for each year:
   DY 4 IT 1.1
   DY 5 IT 1.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of access to care and quality of life for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline third next available appointment and baseline initial score on the Edinburgh Postnatal Depression Scale for quality of life for this population. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline third next available metric is set in DY3. We will aim for a post-treatment score of 13 on the Edinburgh Postnatal Depression Scale as the improvement target for quality of life. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is an only a finite about of money. The Affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.¹ Our valuation includes an increase in the patient’s quality of life. We used a conservative Quality Adjusted Life Year

(“QALY”) per year and a percentage of that QALY for the pediatric population. The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. **TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $267,548.50

Year 2 (10/1/2012 – 9/30/2013)

Year 3 (10/1/2013 – 9/30/2014)

Year 4 (10/1/2014 – 9/30/2015)

Year 5 (10/1/2015 – 9/30/2016)
The Methodist Hospital
Pass 1
Title of Outcome Measure (Improvement Target): IT 1.18 - Follow up after Hospitalization for Mental Illness

Performing Provider Name / TPI: The Methodist Hospital / 137949705

Unique RHP outcome identification number(s): 137949705.3.1

Outcome Measure Description:
IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge. Our goal is that by year four we will have 60% with follow up within 30 days, and by year 5 we will have 80%.
Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge. As it is difficult to arrange appointments so close to discharge because of patient and physician factors, our goal is that by the fourth year we will have 40% follow up within seven days and by the fifth year, 50%.

Process Milestones:
- DY2:  
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:  
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4: IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)  
  - Improvement Target: 60% above baseline
- DY5: IT 1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)  
  - Improvement Target: 80% above baseline

Rationale:
Process milestones in DY 2 are focused on training, education and partnership development. These efforts are largely external efforts focused on our medical staff, collaborating healthcare providers and community partners. Process milestones in DY 3 are focused on establishing our baseline, factors that are driving utilization and establishing a process to follow up with patients post-discharge. These are largely internal efforts with our hospital based work teams.

Outcome Measure Valuation:
We have selected IT 1.18 as our quality outcome metric as we feel this is most important quality outcome to determine the success or impact of our project. Through a focused effort to follow up and coordinate the post discharge care needs of our targeted population we will demonstrate true
value to the community. Meaning, our targeted population will receive higher quality care in the correct care setting, all at a lower cost.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYS 2-5)*: $3,077,979
The University of Texas Health Science Center - Houston

Pass 1
**Title of Outcome Measure (Improvement Target):** OD-12 Primary Care and Primary Prevention

**Unique RHP outcome identification number(s):** 111810101.3.1

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-12.2 Cervical Cancer Screening (HEDIS 2012) (Non-standalone measure)
   Numerator: Number of women aged 21 to 64 that have received a PAP in the measurement year or two prior years. Denominator: Women aged 21 to 64 in the patient or target population. Women who have had a complete hysterectomy with no residual cervix are excluded.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-12.2 Increase by 3% the percentage of women patients of UT Physicians aged 21 to 64 that have received a PAP in the measurement year or two prior years. Women who have had a complete hysterectomy with no residual cervix are excluded.
DY5:
IT-12.2 Increase by 5% the percentage of women patients of UT Physicians aged 21 to 64 that have received a PAP in the measurement year or two prior years. Women who have had a complete hysterectomy with no residual cervix are excluded.

**Rationale:**
By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.
### Related Category 1 or 2 Projects:

**Starting Point/Baseline:**
To be determined during DY3.

<td></td>
</tr>
</tbody>
</table>

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 905,543
Title of Outcome Measure (Improvement Target): OD-12 Primary Care and Primary Prevention

Unique RHP outcome identification number(s): 111810101.3.3
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-12.3 Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)
   Numerator: Number of adults aged 50 to 75 that have received one of the following screenings. Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years
   Denominator: Number of adults aged 50 to 75 in the patient or target population. Adults with colorectal cancer or total colectomy are excluded.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-12.3 Increase by 3% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. Adults with colorectal cancer or total colectomy are excluded.
DY5:
IT-12.3 Increase by 5% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. Adults with colorectal cancer or total colectomy are excluded.

Rationale:
By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.
**Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)**

*UTHealth, UTPhysicians*

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 905,543
**Title of Outcome Measure (Improvement Target):** OD-14 Workforce Development

**Unique RHP outcome identification number(s):** 111810101.3.4

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT – 14.6 Percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)

**Process Milestones:**

**DY2:**
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

**DY3:**
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4: Increase by 3% over baseline the percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)
DY5: Increase by 5% over baseline the percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)

**Rationale:**
In order to move closer to a well-functioning health care delivery system, providers must have training that prepares them for the coordinated, outcomes- and evidence-based health care systems they will be entering. A recent nation-wide study conducted with medical students found that students felt their training was appropriate in terms of clinical decision making and clinical care, but felt that their training had not prepared them appropriately for practicing medicine (Patel MS, Davis MM, Lypson ML. Medical Student Perceptions of Education in Health Care Systems. September, 2009. Academic Medicine, 84(9):1301-6).

By training residents in the new primary care in continuity care clinics located in HPSAs or MUAs, it is expected that more of them will continue to practice in these areas. Furthermore, residents that have lived in HPSAs or MUAs may be more likely to return to these areas to practice medicine. Since there will not be time during the life of this project to determine the influence of the training on choices of practice area, this will be used as one of three indicators of likelihood to practice in an area of need.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $336,321
**Title of Outcome Measure (Improvement Target):** OD-11 Addressing Health Disparities in Minority Populations

**Unique RHP outcome identification number(s):** 111810101.3.7

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-11.5 (IT-2.10) Select any other Category 3 outcome (PPAs, PPRs, or ED utilization) or a combination of non-standalone measures and target a specific minority population with a demonstrated disparity in the particular measure (Standalone measure) (IT-2.10 Flu and pneumonia Admission Rate)

For the Hispanic population:
Numerator: All discharges of age 18 years and older with a principal diagnosis code of flu or pneumonia.
Denominator: Population in Metro Area or county, age 18 years and older.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-11.5 (IT-2.10) Reduce by 3% the percentage of all discharges of Hispanics age 18 years and older with a principal diagnosis code of flu or pneumonia, who are patients of UT Physicians.
DY5:
IT-11.5 (IT-2.10) Reduce by 5% the percentage of all discharges of Hispanics age 18 years and older with a principal diagnosis code of flu or pneumonia, who are patients of UT Physicians.

**Rationale:**
Hispanics have a high rate of death from influenza and pneumonia (2009 CDC, Minority Health. http://www.cdc.gov/minorityhealth/populations/REMP/hispanic.html#10). Harris County and the UT Physician service areas have considerably more Hispanics (Harris County-40.8%; Bayshore-49.2%; Bellair-46%; Cinco Ranch-26.2%; Sienna Village-23.5%) than the national average (16.3%). (Population race/ethnicity statistics are from the U.S. Census Bureau, 2010 Census Summary File 1, Tables P8, PCT4, PCT5, and PCT8. Note: Derived from 2010 Census Summary File 1 data by the Texas State Data Center.) The delivery of culturally sensitive care is more likely to increase the adoption of preventive services such as influenza vaccinations among Hispanics. CHWs have been proven to be effective in serving as linkages between patients and the health system, helping patients to navigate the daunting challenges posed by the fragmented nature of health care delivery on the US. Most CHWs come from the local population, are in touch with the community, hence they are able to aid the health system to deliver culturally sensitive care, and by so doing will help address health disparities in minority populations.
Therefore, a reduction in admissions for flu and pneumonia for the Hispanic population served UT Physicians would be an appropriate measure for the success of this program.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,544,907
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.8
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.7 Controlling high blood pressure (NCQA-HEDIS 2012, NQF 0018)12 (Stand-alone measure)
   Improve the number of patients 18 to 85 years of age with a diagnosis of hypertension, whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.7 Improve by 3% the percentage of UT Physician’s patients (ages 18 to 85 years) with a diagnosis of hypertension, whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.
DY5:
IT-1.7 Improve by 5% the percentage of UT Physician’s patients (ages 18 to 85 years) with a diagnosis of hypertension, whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.

Rationale:
Effective control of blood pressure significantly decreases the risk of coronary artery disease, congestive heart failure, and stroke in hypertensive patients. For instance a 12-point to 13-point reduction in blood pressure can lower the risk of heart attack by 21%, stroke by 37%, and total cardiovascular deaths by 25% (Rein DB, Constantine RT, Orenstein D, Chen H, Jones P, Brownstein JN, et al. A cost evaluation of the Georgia Stroke and Heart Attack Prevention Program. Prev Chronic Dis [serial online] 2006). Use of the chronic disease registry will enable care teams to more closely monitor patients with hypertension and enable them to provide better care, which is expected to leading to better blood pressure control among our hypertensive patients.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration
year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

IT-9.2 Reduce by 5% the percentage of Emergency Department visits for asthma, COPD, CHF, Diabetes, and Hypertension.

**Rationale:**  
We expect the use of the Nurse-line medical triage call center to reduce ED visits, which is an indicator of access to appropriate primary health care. The Nurse-line will provide urgent medical advice and facilitate access to the appropriate level and site of care when needed, thereby improving patient clinical indicators, health outcomes, and reduce unnecessary acute and emergency care utilization. Thus measuring ED visits for the targeted chronic diseases will be a good way of assessing the project’s impact.

**Outcome Measure Valuation:**  
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $2,419,332
**Title of Outcome Measure (Improvement Target):** OD-12 Primary Care and Primary Prevention

**Unique RHP outcome identification number(s):** 111810101.3.10

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-12.2 Cervical Cancer Screening (HEDIS 2012) (Non-standalone measure)

- **Numerator:** Number of women aged 21 to 64 that have received a PAP in the measurement year or two prior years.
- **Denominator:** Women aged 21 to 64 in the patient or target population. Women who have had a complete hysterectomy with no residual cervix are excluded.

**Process Milestones:**
- **DY2:**
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- **DY3:**
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
- **DY4:**
  - IT-12.2 Increase by 3% the percentage of women patients of UT Physicians aged 21 to 64 that have received a PAP in the measurement year or two prior years. Women who have had a complete hysterectomy with no residual cervix are excluded.
- **DY5:**
  - IT-12.2 Increase by 5% the percentage of women patients of UT Physicians aged 21 to 64 that have received a PAP in the measurement year or two prior years. Women who have had a complete hysterectomy with no residual cervix are excluded.

**Rationale:**
By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 815,846
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.13
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.1 Third next available appointment (Non-standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.
DY5:
IT-1.1 Reduce by 2 days over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to one day for Specialty Care.

Rationale:
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accommodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,283,429
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.1
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.6 Cholesterol management for patients with cardiovascular conditions (NCQA-HEDIS 2012) (Standalone measure)
Increase the number of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.
LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
Increase by 3% the percentage of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)
DY5:
Increase by 5% the percentage of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

Rationale:
By increasing access to specialty care, such as the expansion of cardiology care to UT Physicians primary care clinics, we expect that patients at risk for coronary artery disease (CAD) and coronary heart disease (CHD), heart attack, and stroke, are more likely to get the cholesterol screening that would facilitate appropriate care. Working together with patients with known heart disease to reduce cholesterol has the potential to reduce morbidity (heart attack and stroke) and mortality. Using established guidelines (National Cholesterol Education Program) for managing cholesterol levels in patients with heart disease, we would aim to see a reduction in LDL-C of less than or equal to 100 mg/dL.
**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,283,429
Title of Outcome Measure (Improvement Target): OD-4 Potentially Preventable Complications and Healthcare Acquired Conditions

Unique RHP outcome identification number(s): 111810101.3.15
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-4.8 Sepsis mortality (Standalone measure)
Reduce the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis or septic shock and/or an infection and organ dysfunction.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-4.8 Reduce by 3% the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis, or septic shock and/or an infection and organ dysfunction.
DY5:
IT-4.8 Reduce by 5% the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis, or septic shock and/or an infection and organ dysfunction.

Rationale:
Sepsis is one of the leading causes of death in the intensive care unit (ICU) (Bone RC, Balk RA, Cerra FB, Dellinger RP, Fein AM, Knaus WA, et al. Definitions for sepsis and organ failure and guidelines for the use of innovative therapies in sepsis. Chest 1992; 101:1644-55). The number of severe sepsis cases is set to grow at a rate of 1.5% per annum, adding an additional 1 million cases per year in the USA by 2020 (Angus DC, Linde-Zwirble WT, Lidicker J, Clermont G, Carcillo J, Pinsky MR. Epidemiology of severe sepsis in the United States: analysis of incidence, outcome, and associated costs of care. Crit Care Med. 2001 Jul;29(7):1303-10), mainly due to the growing use of invasive procedures and increasing numbers of elderly and high-risk individuals, such as cancer and HIV patients. Sepsis from invasive procedures can be highly reduced by greater adherence to guidelines and by addressing systemic factors that lead to breach of aseptic standards. By improving health care quality, this project will lead to reduction in hospital acquired conditions such as sepsis.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,071,875
Title of Outcome Measure (Improvement Target): OD-6 Patient Satisfaction

Unique RHP outcome identification number(s): 111810101.3.16
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores (1) are getting timely care, appointments, and information (stand alone measure)
Percent improvement over baseline of patient satisfaction scores (all questions within a survey need to be answered to be a stand-alone measure). Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement in a specific tool. Certain supplemental modules for the adult CG-CAHPS survey may be used to establish if patients: (1) are getting timely care, appointments, and information (already established patients at UTP Clinics, who are not cancer surgery patients and who were assigned to a medical home)

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-6.1 (1) Improve by 3% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.
DY5:
IT-6.1 (1) Improve by 5% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.

Rationale:
The medical home project will provide a primary care "home base" for patients, and they will be assigned a health care team that will effectively coordinate their care across inpatient and outpatient settings, and proactively provide preventive, primary, routine and chronic care to them. This would translate to increased likelihood of getting timely care, ease of setting up appointments and receiving helpful care information. Thus assessing patient satisfaction (for patients of UT Physician clinics, who are not cancer surgery patients and have been assigned to a medical home) in these domains of their care experience, as measured using the adult CG-CAHPS survey for the domain of getting timely care, appointments, and information, will be a good measure of the outcome of this project.
Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

### Year 2 (10/1/2012 – 9/30/2013)

- **Process Milestone 1 [P-1]:** Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans  
  Data Source: Project reports and documents
- **Process Milestone 1 Estimated Incentive Payment:** $83,182

### Year 3 (10/1/2013 – 9/30/2014)

- **Process Milestone 2 [P-2]:** Establish baseline rates  
  Data Source: Provider reports
- **Process Milestone 2 Estimated Incentive Payment:** $99,026
- **Process Milestone 3 [P-3]:** Develop and test data systems  
  Data Source: Project reports, EMR, claims
- **Process Milestone 3 Estimated Incentive Payment:** $99,025

### Year 4 (10/1/2014 – 9/30/2015)

- **Outcome Improvement Target 1 [IT-6.1 (1)]:** Improve by 3% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.  
  Data Source: Surveys
- **Outcome Improvement Target 1 Estimated Incentive Payment:** $205,978

### Year 5 (10/1/2015 – 9/30/2016)

- **Outcome Improvement Target 2 [IT-6.1 (1)]:** Improve by 5% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.  
  Data Source: Surveys
- **Outcome Improvement Target 2 Estimated Incentive Payment:** $443,633

### Year 2 Estimated Outcome Amount: $83,182

### Year 3 Estimated Outcome Amount: $198,051

### Year 4 Estimated Outcome Amount: $205,978

### Year 5 Estimated Outcome Amount: $443,633

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $930,839
**Title of Outcome Measure (Improvement Target):** OD-1- Primary Care and Chronic Disease Management

**Unique RHP outcome identification number(s):** 111810101.3.17

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**

IT-1.10 Diabetes care: HbA1c poor control (>9.0%) 233- NQF 0059 (Standalone measure).

   Numerator: Percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had hemoglobin A1c (HbA1c) control > 9.0%. Denominator: Members 18 to 75 years of age as of December 31 of the measurement year with diabetes (type 1 and type 2).

**Process Milestones:**

DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3:
P-2 Establish baseline rates

P-3 Develop and test data systems

**Outcome Improvement Targets for each year:**

DY4:

IT-1.10 Decrease by 3% the percent over baseline the number of patients 18-75 years of age with diabetes (type 1 or type 2), and who were assigned to a medical home, who had hemoglobin A1c (HbA1c) control > 9.0%.

DY5:

IT-1.10 Decrease by 5% the percent over baseline the number of patients 18-75 years of age with diabetes (type 1 or type 2), and who were assigned to a medical home, who had hemoglobin A1c (HbA1c) control > 9.0%.

**Rationale:**

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars. The medical home project will provide a primary care "home base" for patients, and they will be assigned a health care team that will effectively coordinate their care across inpatient and outpatient settings, and proactively provide preventive, primary, routine and chronic care to them. This would translate to increased likelihood of getting timely care for diabetic patients, ease of setting up appointments and receiving helpful care information. Thus Assessment of HbA1c control will be a good measure of the outcome of this project.
**Outcome Measure Valuation:**

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

</table>

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 930,839
**Title of Outcome Measure (Improvement Target):** OD-2 Potentially Preventable Admissions

**Unique RHP outcome identification number(s):** 111810101.3.18

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**

**IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate:** (Standalone measure)

**Numerator:** Total number of acute care hospitalizations for ambulatory care sensitive conditions under age 75 years (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes). Exclusions: Individuals 75 years of age and older, or death before discharge.

**Denominator:** Total mid-year population under age 75

**Process Milestones:**

**DY2:**

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

**DY3:**

P-3 Develop and test data systems

P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**

**DY4:**

IT-2.11 Reduce by 3% the percentage of acute care hospitalizations for ambulatory care sensitive conditions (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes) for persons under the age 75 years. Exclusions: Individuals 75 years of age and older, or death before discharge.

**DY5:**

IT-2.11 Reduce by 5% the percentage of acute care hospitalizations for ambulatory care sensitive conditions (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes) for persons under the age 75 years. Exclusions: Individuals 75 years of age and older, or death before discharge.

**Rationale:**

This project aims to develop and implement evidence based chronic disease management interventions (Coleman et al. Evidence on the Chronic Care Model in the New Millennium. Health Affairs 28, no. 1 (2009): 75–85) that will ultimately improve patient clinical indicators, health outcomes, and reduce unnecessary acute and emergency care utilization for patients with chronic diseases. Appropriate primary care and evidence-based management of chronic diseases has the potential to reduce acute episodes of illnesses requiring hospitalization.
**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 1,523,190
Title of Outcome Measure (Improvement Target): OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs)

Unique RHP outcome identification number(s): 111810101.3.19
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-3.9 Chronic Obstructive Pulmonary Disease 30 day readmission rate (Standalone measure)
Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.
Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of COPD and with a complete claims history for the 12 months prior to admission.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-3.9 Reduce by 3% the percentage of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.
DY5:
IT-3.9 Reduce by 5% the percentage of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Rationale:
When a patient is discharged without optimal follow-up, it could have terrible consequences such as hospital readmission and possibly death. Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $1,692,434
**Title of Outcome Measure (Improvement Target):** OD-13 Palliative Care

**Unique RHP outcome identification number(s):** 111810101.3.20

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-13.1 Pain assessment (NQF-1637) (Non-standalone measure)
Increase the number of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-13.1 Increase by 3% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.
DY5:
IT-13.1 Increase by 5% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

**Rationale:**
Research shows that the prevalence of pain among patients with incurable illness and at the end of life is as high as 40 – 70% (Gade G, Venohr I, Conner D, et al. Impact of an inpatient palliative care team: a randomized control trial. J Palliat Med. 2008;11(2):180–190), and pain is under-recognized by clinicians and undertreated, resulting in excess suffering among these
patients. Pain screening and assessments will thus be a good measure of the quality of palliative care services provided to patients.

**Outcome Measure Valuation:**

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 111810101.3.21
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-13.2 Treatment Preferences (NQF 1641) (Non-standalone measure)
Percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments. Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
Increase by 3% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments. Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.
DY5:
Increase by 5% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments. Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

Rationale:
In the absence of a clear guideline for end-of-life care, care decisions are often taken by the physician/care team and this tends to be in favor of life sustaining treatments. As a result of these aggressive treatments, lots of expensive interventions are given to patients in the last few months of life with poor and questionable outcomes. Site of death accounts for significant variation in end-of-life costs; for example costs for Medicare beneficiaries who died in a hospital inpatient setting have been found to be twice those for beneficiaries who died in other settings such as their homes (Carol Raphael, Joann Ahrens, & Nicole Fowler. Financing end-of-life care in the USA. J R Soc Med. 2001 September; 94(9): 458–461). Palliative care aims to address these imbalances and it is necessary to measure the success of the project by assessing how much patient preferences are being respected.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration
year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $291,476
Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 111810101.3.22
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-13.5 Percentage of patients receiving hospice or palliative care services with documentation in the clinical record of a discussion of spiritual/religions concerns or documentation that the patient/caregiver did not want to discuss. (NQF 1647 modified) (Non-st Increase the number of patients discharged from hospice or palliative care with clinical record documentation of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
Increase by 3% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.
DY5:
Increase by 5% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns or documentation that the patient/family did not want to discuss during the reporting period.

Rationale:
A comprehensive interdisciplinary approach is one of the hallmarks of palliative care, and this entails caring for the physical, psychosocial, and spiritual needs of patients and their families. An essential step to providing for the needs of patients is initiating discussions about their spiritual concerns. This measure will thus be an important indicator of the quality of palliative care provided through this project.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 291,476
**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Unique RHP outcome identification number(s):** 111810101.3.23

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-1.2 Annual monitoring for patients on persistent medications (NCQA-HEDIS 2012)219–angiotensin converting enzyme (ACE) inhibitors or angiotensin receptor blockers (ARBs) (Non-standalone measure)
Percentage of members 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-1.2 Improve by 3% the percentage of members 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.
DY5:
IT-1.2 Improve by 5% the percentage of members 18 years of age and older who received at least 180 treatment days of ACE inhibitors or ARBs during the measurement year and had at least one serum potassium and either a serum creatinine or a blood urea nitrogen therapeutic monitoring test in the measurement year.

**Rationale:**
The medication management program is aimed to decrease medication errors and improve compliance with therapy especially in chronic care and in patients with multiple chronic conditions, thereby leading to improved outcomes. Because of the potential for interaction between angiotensins and digoxin and diuretics, among other medications, monitoring of patients on angiotensins will be a good measure of this project’s success.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration
year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

</table>

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 319,681
**Title of Outcome Measure (Improvement Target):** OD-3 Potentially Preventable Readmissions - 30 day Readmission Rates (PPRs)

**Unique RHP outcome identification number(s):** 111810101.3.26

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-3.3 Diabetes 30 day readmission rate (Standalone measure)
Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission. If an index admission has more than 1 readmission, only first is counted as a readmission. Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of diabetes and with a complete claims history for the 12 months prior to admission.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-3.3 Reduce by 3% the number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission.
DY5:
IT-3.3 Reduce by 5% the number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index diabetes admission.

**Rationale:**
When a patient is discharged without optimal follow-up, it could have terrible consequences such as hospital readmission and possibly death. Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays. Also, patients with cancer often have to consult with different kinds of providers at different settings as part of their care process - ranging from inpatient surgical procedures, outpatient clinic settings, to appointment for procedures/therapies such as radiotherapy. By providing assistance in transitioning from hospital care to out-patient care, we expect that hospital readmission rates would go down.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**Unique RHP outcome identification number(s):** 111810101.3.27  
**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**  
IT-1.8 Depression management: Screening and Treatment Plan for Clinical Depression (PQR 2011, #134) (Non-standalone measure)  
**Numerator:** Patient’s screening for clinical depression using a standardized tool AND follow-up plan is documented.

**Process Milestones:**  
DY2:  
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans  
DY3:  
P-3 Develop and test data systems  
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**  
DY4:  
IT-1.8 Increase by 3% the percentage of UT Physicians patients who receive screening for clinical depression using a standardized tool AND a follow-up plan is documented.  
DY5:  
IT-1.8 Increase by 5% the percentage of UT Physicians patients who receive screening for clinical depression using a standardized tool AND a follow-up plan is documented.

**Rationale:**  
The integration of behavioral health care with primary health care is expected to increase the detection and treatment of depression. When depression is recognized, it can be appropriately treated and outcomes improved, particularly when coupled with primary care. Systematic screening is a means of improving detection, treatment, and outcomes of depression. Therefore measuring screening rates and treatment plans will be an appropriate measure of the success of this project for integrating behavioral health care and primary health care.

**Outcome Measure Valuation:**  
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $ 874,425
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.28
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.9 Depression management: Depression Remission at Twelve Months (NQF# 0710) (Standalone measure)
Numerator: Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.
Denominator: Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine.
Exclusions: Patients who die, are a permanent resident of a nursing home or are enrolled in hospice are excluded from this measure. Additionally, patients who have a diagnosis (in any position) of bipolar or personality disorder are excluded.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
Increase by 3% the percentage of adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.
DY5:
Increase by 5% the percentage of adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.

Rationale:
The Patient Health Questionnaire (PHQ-9) tool is a widely accepted and standardized tool that is utilized by providers to monitor treatment progress. There is evidence that integrated behavioral health services enhance access to mental health care services, improve quality of life, reduce the incidence of depression and utilization of emergency department services, and overall health care costs (AHRQ. Service Delivery Innovation Profile: Integrated Behavioral Health Reduces Depression and Anxiety in Primary Care Patients, Improving Quality of Life and Reducing Costs. http://www.innovations.ahrq.gov/content.aspx?id=2951). Assessment of depression remission will thus be suitable to assess the success of this integrated care project.
Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $874,425
The University of Texas Health Science Center - Houston
Pass 2
**Title of Outcome Measure (Improvement Target):** OD-12 Primary Care and Primary Prevention

**Unique RHP outcome identification number(s):** 111810101.3.29

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-12.1 Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)
   Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period. Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
IT-12.1 Increase by 3% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.
DY5:
IT-12.1 Increase by 5% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.

**Rationale:**
By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**Title of Outcome Measure (Improvement Target):** OD-1 Primary Care and Chronic Disease Management

**Unique RHP outcome identification number(s):** 111810101.3.32

**Performing Provider Name/TPI:** UTHealth, UTPhysicians/111810101

**Outcome Measure Description:**
IT-1.6 Cholesterol management for patients with cardiovascular conditions (NCQA-HEDIS 2012) (Standalone measure)
Increase the number of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.
LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

**Process Milestones:**
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

**Outcome Improvement Targets for each year:**
DY4:
Increase by 3% the percentage of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)
DY5:
Increase by 5% the percentage of patients who had each of the following during the reporting period:
Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

**Rationale:**
By increasing access to specialty care, such as the expansion of cardiology care to UT Physicians primary care clinics, we expect that patients at risk for coronary artery disease (CAD) and coronary heart disease (CHD), heart attack, and stroke, are more likely to get the cholesterol screening that would facilitate appropriate care. Working together with patients with known heart disease to reduce cholesterol has the potential to reduce morbidity (heart attack and stroke) and mortality. Using established guidelines (National Cholesterol Education Program) for managing cholesterol levels in patients with heart disease, we would aim to see a reduction in LDL-C of less than or equal to 100 mg/dL.
**Outcome Measure Valuation:**
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD:** $763,429
The University of Texas Health Science Center - Houston
Pass 3
Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.33
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-10.1 Quality of Life (Standalone measure)
Demonstrate improvement in quality of life (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.
Percent of pediatric patients ages 8-18, who are receiving both behavioral health and primary care in the integrated behavioral/primary care clinic setting for the previous 12 months, that show improvement in scores on the 23-item PedsQL™ Generic Core questionnaire.
Numerator: Patients from the denominator with improvement in scores on the 23-item PedsQL™ Generic Core questionnaire. Denominator: Patients 8-18 years of age as of the measurement year who received at least 12 months consecutive outpatient care for behavioral and primary care in the integrated clinic.

Process Milestones:
DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3: P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4: IT-10.1 Increase by 3% over baseline the number of patients ages 8-18, who are receiving both behavioral health and primary care in the integrated behavioral/primary care clinic setting for the previous 12 months, that show improvement in scores on the 23-item PedsQL™ Generic Core questionnaire.
DY5: IT-10.1 Increase by 5% over baseline the number of patients ages 8-18, who are receiving both behavioral health and primary care in the integrated behavioral/primary care clinic setting for the previous 12 months, that show improvement in scores on the 23-item PedsQL™ Generic Core questionnaire.

Rationale:
In medical outcomes research, there is an increasing interest in instruments that measure health-related quality of life (HRQOL), a multidimensional concept that includes physical, psychological and social domains of health and is generally accepted as an important outcome
measure of health care.\textsuperscript{1} For a project that integrates behavioral health care with primary care, measuring HRQOL would be a particularly relevant and appropriate measure. The PedsQL\textsuperscript{TM} measurement model for pediatric quality of life can be used in both health children/adolescents and those with chronic health conditions and integrates both the generic core scales and disease-specific modules into one measurement system. This measurement model provides for multidimensional assessment that includes physical, emotional, social, and school functioning.

The PedsQL\textsuperscript{TM} has good reliability and validity and been used in numerous clinical trials, with results reported in over 700 publications.\textsuperscript{2} The generic core scales consists of 4 multidimensional scales (physical functioning-8 items, emotional functioning-5 items, social functioning-5 items, and school functioning 5-items) and 3 summary scores (physical health summary score-8 items, psychosocial health summary score-15 items, and the total scale score of all 23 items).\textsuperscript{3} The questionnaire will be administered in the clinic setting according to prescribed protocols for the administration of this questionnaire to children and their parents prior to seeing the provider for the first time.\textsuperscript{4} Follow-up questionnaires will be administered at 6 month intervals.

**Outcome Measure Valuation:**

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects’ related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $ 2,186,060
Tomball Regional Hospital
Pass 1
Performing Provider Name/TPI: Tomball Regional Medical Center / 288523801

Title of Outcome Measure (Improvement Target): OD-2- Potentially Preventable Admissions

Title of Outcome Measure (Improvement Target): IT-2.5 Chronic Obstructive Pulmonary Disease (COPD) Admission Rate- 241PQI 5 (Stand alone measure)

a. Numerator: All non-maternal discharges of age 18 years and older with a principal diagnosis code for COPD.
b. Denominator: Population in Metro Area or county, age 18 years and older.
c. Data Source: EHR, Claims
d. Rationale/Evidence: COPD with MCC is the fourth largest admission category for the target population in Tomball. Combined with all COPD cases in this population group the diagnosis creates four admissions per month. Please see footnote for specific diagnosis codes to be included as well as criteria for case exclusion.

The above targets were chose due to the fact that these diagnoses represent the two largest groups of preventable admissions in Tomball. By providing access to care, patients can receive treatment in a timely fashion and therefore prevent the escalation of illness to the point of requiring hospital services. The targeted reduction of five percent of these admissions would reduce state payments for hospital services and uncompensated care by $265,000 annually for each Improvement Target.

To achieve these targets, a planning group will be formed to include Pulmonologists, ED providers, Family Practice Physician, the clinic Mid-Level provider and representatives of the Clinic and Hospital Administrative teams. This group will be tasked to identify proper clinical protocols, patient education material, other needed resources and to document implementation plans.

Valuation is based on the potential savings of admissions and the providers’ time to develop the program.

**Regional Healthcare Partnership Plan**

Region 3
**Unique ID:** 288523801.3.2  
**Performing Provider Name/TPI:** Tomball Regional Medical Center / 288523801

**Title of Outcome Measure (Improvement Target):** IT-2.10 Flu and pneumonia Admission Rate *(Stand alone measure)*  

a. Numerator: All discharges of age 18 years and older with a principal diagnosis code of flu or pneumonia.  
b. Denominator: Population in Metro Area or county, age 18 years and older.  
c. Data Source: EHR, Claims  
d. Rationale/Evidence: Hospitalizations for the Bacterial Pneumonia are considered “potentially preventable,” because if the individual had access to and cooperated with appropriate outpatient healthcare, the hospitalization would likely not have occurred. The methodology used to identify “potentially preventable hospitalizations” was developed by the Agency for Healthcare Research and Quality (AHRQ). AHRQ is the lead federal agency responsible for research on healthcare quality costs, outcomes and patient safety.

The above targets were chose due to the fact that these diagnoses represent the two largest groups of preventable admissions in Tomball. By providing access to care, patients can receive treatment in a timely fashion and therefore prevent the escalation of illness to the point of requiring hospital services. The targeted reduction of five percent of these admissions would reduce state payments for hospital services and uncompensated care by $265,000 annually for each Improvement Target.

To achieve these targets, a planning group will be formed to include Pulmonologists, ED providers, Family Practice Physician, the clinic Mid-Level provider and representatives of the Clinic and Hospital Administrative teams. This group will be tasked to identify proper clinical protocols, patient education material, other needed resources and to document implementation plans.

Valuation is based on the potential savings of admissions and the providers’ time to develop the program.

**Performing Provider Name/TPI:** Tomball Regional Medical Center / 288523801

**Title of Outcome Measure (Improvement Target):** OD-3 Potentially Preventable Re-Admissions - 30-day Readmission Rates (PPRs)

**Outcome Measure Description:**

The relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay. Given data limitations, only readmissions to the same facility will be included as part of each hospital’s rates.

Readmission rates are calculated for the following individual medical conditions: Congestive heart failure, diabetes, chronic obstructive pulmonary disease, stroke, and asthma. Readmissions create excessive healthcare cost to providers and payers. In addition, the extended recovery period places that patient at undue risk and reduces the quality of life.

With the increased access to primary care, patients will receive post hospital follow-up and educations. Recovery and progress will be monitored and treatment plans can be amended to fit the patient’s condition.

**Title of Outcome Measure (Improvement Target):** IT-3.1 All cause 30-day readmission rate-NQF 1789250 (Stand alone measure)

a. Numerator: The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned.

b. Denominator: Admissions to acute care facilities for patients aged 18 years or older.

c. Data Source: EHR, Claims

A planning group will also be convened to develop the plans and monitor the progress of this initiative. For this project data will have to be defined, baselines determined and goals established. Target improvement by year 5 is a 5% reduction in the defined diagnostic groups. Estimated savings to patients and payers is projected to reach $265,000 by DY 5.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD**<br>(add outcome amounts over DYs 2-5): $736,404
**Unique ID:** 288523801.3.4  
**Performing Provider Name/TPI:** Tomball Regional Medical Center / 288523801  

**Title of Outcome Measure (Improvement Target):** OD-9 Right Care, Right Setting  
**Title of Outcome Measure (Improvement Target):** IT-9.2 ED appropriate utilization  
*(Standalone measure)*

- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)  
- Reduce Emergency Department visits for target conditions  
  - Congestive Heart Failure  
  - Diabetes  
  - End Stage Renal Disease  
  - Cardiovascular Disease /Hypertension  
  - Behavioral Health/Substance Abuse  
  - Chronic Obstructive Pulmonary Disease  
  - Asthma

This outcome measure is chosen because it reflects all of the above indicators. By increasing access to primary care, after-hours services, access to vaccinations and post hospital follow-up care patients will receive the right care in the right setting. This will result in conditions not escalating to the point that they require emergency and hospital services and thereby, improve the overall health of the patient population.

During 2012, Tomball Regional Medical Center has experienced a 10.4% growth in ED visits. Visits by uninsured patients have increased by 19.2%. A five percent reduction in visits from indigent and uninsured will reduce payments by payers and uncompensated care by $527,431.

University of Texas M.D. Anderson Cancer Center

Pass 1
Title of Outcome Measure (Improvement Target): IT-12.3 – Colorectal Cancer Screening (HEDIS 2012)

Unique RHP outcome identification number(s): 112672402.3.1

Outcome Measure Description:
IT-12.3 Colorectal Cancer Screening (HEDIS 2012)

Process Milestones:
- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:
- DY3: IT – 12.3 Number of adults aged 50 to 75 who receive one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years) – Improvement percent 1900% over baseline of 100. (The baseline is calculated for only one month of DY2. This accounts for the large percentage increase between DY2 baseline and DY3.)
- DY4: IT – 12.3 Number of adults aged 50 – 75 who receive one of the following screenings: a fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years) – Improvement percent 5% over DY3
- DY5: IT – 12.3 Number of adults aged 50 – 75 who receive one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years) – Improvement percent 5% over DY4

Rationale:
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of CRC screening services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up expansion period of a CRC screening program.

Outcome Measure Valuation:
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.</td>
<td>Preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. **Title of Outcome Measure (Improvement Target):** IT-12.6 – Other Outcome
Improvement Target: Flu vaccination status for adults age 50 – 75

**Unique RHP outcome identification number(s):** 112672402.3.2

**Outcome Measure Description:**
IT-12.6 Other Outcome Improvement Target: Flu vaccination status for adults age 50 – 75

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- **DY3:** IT – 12.6 Numerator: Number of adults aged 50 to who have received flu vaccination – Improvement percent 1900% over baseline of 100. (The baseline is calculated for only one month of DY2. This accounts for the large percentage increase between DY2 baseline and DY3.)
- **DY4:** IT – 12.6 Numerator: Number of adults aged 50 to who have received flu vaccination – Improvement percent 5% over DY 3
- **DY5:** IT – 12.6 Numerator: Number of adults aged 50 to who have received flu vaccination – Improvement percent 5% over DY4

**Rationale:**
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of flu vaccination services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a screening program.

**Outcome Measure Valuation:**
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

**Title of Outcome Measure (Improvement Target):** IT-11.6 – Other Outcome Improvement Target (Quit Attempts)

**Unique RHP outcome identification number(s):** 112672402.3.4

**Outcome Measure Description:**
IT-11.6 – Other Outcome Improvement Target (Quit Attempts)
- Numerator: Number of HIV+ smokers that make a quit attempt

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- **DY3:** IT – 11.6 Numerator: Number of HIV+ smokers that make a quit attempt – 75% (n=187) of enrollees (n=250) will make a successful quit attempt by 6-month follow-up
- **DY4:** IT – 11.6 Numerator: Number of HIV+ smokers that make a quit attempt – 75% (n=375) of enrollees (n=500) will make a successful quit attempt by 6-month follow-up
- **DY5:** IT – 11.6 Numerator: Number of HIV+ smokers that make a quit attempt – 75% (n=188) of the remaining enrollees (n=250) will make a successful quit attempt by 6-month follow-up

**Rationale:**
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the quit attempts among HIV+ smokers. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation program for HIV+ smokers.

**Outcome Measure Valuation:**
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

**Year 5 Estimated Outcome Amount:** $470,307.33

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5):* $820,837.99
**Title of Outcome Measure (Improvement Target):** IT-11.6 – Other Outcome Improvement Target (Smoking Cessation - Staying Quit)

**Unique RHP outcome identification number(s):** 112672402.3.5

**Outcome Measure Description:**

IT-11.6 – Other Outcome Improvement Target (Smoking Cessation – Staying Quit)
- Numerator: Number of HIV+ smokers that will be abstinent at the time of follow-up

**Process Milestones:**
- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- DY3: IT – 11.6 Numerator: 25% of HIV+ smokers (n=62) will be abstinent at the time of 6-month follow-up
- DY4: IT – 11.6 Numerator: 25% of HIV+ smokers (n=125) will be abstinent at the time of 6-month follow-up
- DY5: IT – 11.6 Numerator: 25% of HIV+ smokers (n=63) will be abstinent at the time of 6-month follow-up

**Rationale:**

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and smoking cessation resources currently available to measure and monitor the staying quit status of HIV+ smokers. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation program for HIV+ smokers.

**Outcome Measure Valuation:**

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD
Title of Outcome Measure (Improvement Target): IT-11.3 Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity (Screening for Cigarette Smoking)

Unique RHP outcome identification number(s): 112672402.3.6

Outcome Measure Description:
IT-11.3 Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity (Screening for Cigarette Smoking)
- Numerator: Number of HIV+ patients from Legacy Community Health Services screened for smoking

Process Milestones:
- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3 – DY5:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:
- DY3: IT-11.3 Number of HIV+ patients from Legacy Community Health Services screened for smoking – 90% (approximately 2000) of HIV+ patients from Legacy will be screened for current smoking
- DY4: IT-11.3 Number of HIV+ patients from Legacy Community Health Services screened for smoking – 90% (approximately 2000) of HIV+ patients from Legacy will be screened for current smoking
- DY5: IT-11.3 Number of HIV+ patients from Legacy Community Health Services screened for smoking – 90% (approximately 2000) of HIV+ patients from Legacy will be screened for current smoking

Rationale:
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor screening for cigarette smoking services provided to HIV+ smokers. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which proactive smoking status procedures will be implemented in the Legacy clinic setting. The target percentage is based on previous research of similar screening and intervention delivery approaches. It is expected that this target will be achievable during the start-up period of the proposed smoking cessation program.

Outcome Measure Valuation:
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** (add outcome amounts over DYs 2-5): $820,837.99
Title of Outcome Measure (Improvement Target): IT-11.6 – Other Outcome Improvement Target: Reduce susceptibility to tobacco usage among adolescents aged 11 to 18 years (Reduction of Susceptibility to Tobacco Use)

Unique RHP outcome identification number(s): 112672402.3.7

Outcome Measure Description:

- IT-11.6: Other Outcome Improvement Target (Reduction of Susceptibility to Tobacco Use) – Reduce susceptibility to tobacco usage among adolescents 11 to 18 years of age.

Susceptibility to Smoking is measured by a 3-item scale. These items are as follows: "Are you seriously thinking about trying smoking sometime next year?", "Are you seriously thinking about trying smoking soon?", and "Will you smoke a cigarette if offered by a friend?". The response categories are (1) Definitely yes, (2) Probably yes, (3) Probably not, and (4) Definitely not. Failure to respond "Definitely not" to all three items signifies that the respondent is susceptible to smoking.

Process Milestones:

- DY2:
  - P-1 – Project planning and initiation – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems

- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY3: Numerator: Number of youth ages 11-18 assessed as susceptible to tobacco use at the beginning of DY3 (n=3,150) minus the number of youth ages 11-18 assessed as susceptible to tobacco use at the end of DY3 (n=3,080). Denominator: Number of youth assessed as susceptible to tobacco use at the beginning of DY3 (n=3,150). Improvement percent is 2% reduction in susceptibility (n=70) over baseline of 3,150.

- DY4: Numerator: Number of youth ages 11-18 assessed as susceptible to tobacco use at the beginning of DY4 (n=3,080) minus the number of youth ages 11-18 assessed as susceptible to tobacco use at the end of DY4 (n=3,065). Denominator: Number of youth assessed as susceptible to tobacco use at the beginning of DY4 (n=3,080). Improvement percent is approximately 0.5% reduction in susceptibility (n=15) over baseline of 3,080.

- DY5: Numerator: Number of youth ages 11-18 assessed as susceptible to tobacco use at the beginning of DY5 (n=3,065) minus the number of youth ages 11-18 assessed as susceptible to tobacco use at the end of DY5 (n=3,050). Denominator: Number of youth assessed as susceptible to tobacco use at the beginning of DY5 (n=3,065). Improvement percent is approximately 0.5% reduction in susceptibility (n=15) over baseline of 3,065.
Rationale:
The 2012 Report of the Surgeon General entitled, Preventing Tobacco Use Among Youth and Young Adults concluded that prevention efforts must focus on both adolescents and young adults because among adults who become daily smokers, nearly all first use of cigarettes occurs by 18 years of age (88%), with 99% of first use by 26 years of age. Furthermore, advertising and promotional activities by tobacco companies have been shown to cause the onset and continuation of smoking among adolescents and young adults. Finally, coordinated, multi-component interventions that combine mass media campaigns, price increases including those that result from tax increases, school-based policies and programs, and statewide or community-wide changes in smoke-free policies and norms are effective in reducing the initiation, prevalence, and intensity of smoking among youth and young adults.

Process milestones P-1 and P-3 were selected for the ASPIRE youth tobacco use prevention and cessation project based on the needs of the target population. To prepare for the project, we will also develop the program infrastructure and improve the program delivery systems (i.e. ASPIRE and provider training). Further, the metric of susceptibility was selected because it is a widely used measure in national and state surveys and is a strong predictor of smoking initiation in adolescents.(1)

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation and prevention program with respect to tobacco use reduction and susceptibility to tobacco use reduction among low income adolescents.

Outcome Measure Valuation:
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY. Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.
Performing Provider Name: The University of Texas MD Anderson Cancer Center

Starting Point/Baseline: Baseline: number of Medicaid-eligible/indigent adolescents ages 11-18 susceptible to tobacco use in DY2 = 3050*

Process Milestone 1 [P-1]: Project planning-engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans for evidence-based ASPIRE program in RHP 3 counties.

Metric 1 [P-1.1]: Meeting(s) with stakeholders and project staff to identify current capacity and needed resources to reduce youth susceptibility to smoking.

Baseline/Goals: One meeting at each program site (schools/clinics)

Data Source: Meeting agendas, minutes and attendance rosters

Rationale/evidence: Process milestone P-1 was chosen due to the need to accurately identify current capacity and resources needed to deliver the ASPIRE program to adolescents susceptible to tobacco use.

Metric 2 [P-1.2]: Develop timeline and document implementation plan

Baseline/Goals: Develop one project implementation plan and timeline to

Process Milestone 2 [P-3]: Develop and test data systems

Metric 1 [P-3.1]: Develop and test data system for tracking and reporting

Baseline/goals: Implementation of data system and data systems test(s) to track number of Medicaid-eligible/indigent youth susceptible to smoking as defined by Susceptibility to Smoking scale.

Data source: Database and documentation of data systems test

Rationale/evidence: Process milestone P-3 was chosen due to need for current data on susceptibility to tobacco use of Medicaid-eligible/indigent youth. In order to report accurate data and establish baselines P-3 must be approached in DY2-DY3.

Process Milestone 3: Estimated Incentive Payment: $788,025.00

Outcome Improvement Target [IT-11.6]: Other Outcome Improvement Target (Reduction of Susceptibility to Tobacco Use) – Reduce susceptibility to tobacco use by 0.5% (n = 15) among 3,080 adolescents aged 11 to 18 years who are susceptible to tobacco use in RHP3 counties.

a. Baseline: 3,080 Goal: 3,065
b. Numerator: Number of youth ages 11-18 assessed as susceptible to tobacco use at the beginning of DY4 minus the number of youth ages 11-18 assessed as susceptible to tobacco use at the end of DY4.

c. Denominator: Number of youth assessed as susceptible to tobacco use at the beginning of DY4

d. Data Source: ASPIRE program database and adolescent surveys

e. Rationale/Evidence: Susceptibility to Smoking is a nationally recognized standard predictor of smoking initiation among youth. In research studies of predicting power, Susceptibility outperformed all the other known risk factors, such as smoking among best friends and parents, academic performance, depression, etc. For over 20 years, the Susceptibility to Smoking has been an...

|---|---|---|---|
| Baseline: number of Medicaid-eligible/indigent adolescents ages 11-18 susceptible to tobacco use in DY2 = 3050*  
| Tobacco use prevention among adolescents; therefore, it will be employed in our project.  
*According to the US Bureau of the US Census, the total estimated number of youth aged 11 to 18 years in RHP3 is approximately 1.3 million. We estimated that at least 25% of these adolescents are Medicaid eligible/indigent (about 305,500). Then we estimated that 5% of these low income adolescents (15,250) will enroll in this project (connecting to ASPIRE and/or introduced by providers during clinical encounters). According to results from the 2002 to 2008 National Surveys on Drug Use and Health, approximately 13% are current smokers (varies by age, gender, ethnicity and other factors). The estimated number of participants for this project is based on the aforementioned data source. Of the 15,250, 20% are estimated as being susceptible to tobacco use. This is 3050 adolescents.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD** *(add outcome amounts over DYs 2-5): $6,303,150.00*
**Title of Outcome Measure (Improvement Target):** IT-11.6 – Other Outcome
Improvement Target: Increase quit attempts among adolescents aged 11 to 18 years (Quit Attempts)

**Unique RHP outcome identification number(s):** 112672402.3.8

**Outcome Measure Description:**
- **IT-11.6:** Other Outcome Improvement Target (Quit Attempts) – 30% of current smokers will make at least one quit attempt. In absolute numbers, we estimate 600 of 1,980 smokers will make at least one quit attempt.

  Quit Attempt represents trying to refrain from using tobacco for at least 24 hours or longer, but not resulting in quitting for an extended period of time (i.e., relapsing back to tobacco use).

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning and initiation– engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans along with beginning the process of modernizing the ASPIRE program with its companion tools and resources
  - P-3 – Develop and test data systems and with completing the process of modernizing the ASPIRE program with its companion tools and resources
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
**IT-11.6:** Other Outcome Improvement Target (Quit Attempts) – Increase quit attempts for 24 hours among the estimated 1,980 smokers by 30% (n = 600).

The estimate of 1,980 smokers is based on current ASPIRE program data showing 13% of adolescents smoke with the denominator being the estimated 15,250 Medicaid/eligible youth who will enroll in the ASPIRE program from DY2 to DY5. Declining numbers are due to smaller populations in the RHP 3 counties that will be added in DY4 and DY5. Estimates of quit attempts for each year are as follows:
- **DY3:** 420 participants will try to quit
- **DY4:** 90 smokers will try to quit
- **DY5:** 90 smokers will try to quit

**Rationale:**
This project aims to reduce smoking initiation and facilitate smoking cessation among the vast majority of the aforementioned youth (i.e., ages 11 through 18 years). Importantly, it will address tobacco use among the most vulnerable low-income groups of youth in clinics and schools, involving health professionals in sustainable activities that will lead to a dramatic reduction of tobacco use among the target population.
According to the 2012 Report of the Surgeon General entitled, *Preventing Tobacco Use Among Youth and Young Adults*, coordinated, multi-component interventions that combine mass media campaigns, price increases including those that result from tax increases, school-based policies and programs, and statewide or community-wide changes in smoke-free policies and norms are effective in reducing the initiation, prevalence, and intensity of smoking among youth and young adults.

Process milestones P-1 and P-3 were selected for the ASPIRE youth tobacco use prevention and cessation project based on the needs of the target population. To prepare for the project, we will also develop the program infrastructure and improve the program delivery systems (i.e. ASPIRE and provider training).

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation and prevention program with respect to tobacco use reduction and susceptibility to tobacco use reduction among low income adolescents.

**Outcome Measure Valuation:**

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY. Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

**Process Milestone 1 [P-1]:** Project planning-engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

**Metric 1 [P-1.1]:** Meeting(s) with stakeholders and project staff to identify current capacity and needed resources to increase quit attempts among adolescent smokers.

**Baseline/Goals:** One meeting at each program site (schools/clinics)

**Data Source:** Meeting agendas, minutes and attendance rosters

**Rationale/evidence:** Process milestone P-1 was chosen due to the need to accurately identify current capacity and resources needed to deliver the ASPIRE program, cessation services and treatment to adolescent smokers to increase quit attempts in this population.

**Process Milestone 2 [P-2]:** Develop and test data systems

**Metric 2 [P-2.1]:** Develop and test data system for tracking and reporting

**Baseline/goals:** Implementation of data system and data systems test(s) to track number of Medicaid-eligible/indigent youth smokers making a quit attempt.

**Data Source:** Database and documentation of data systems test

**Rationale/evidence:** Process milestone P-2 was chosen due to the need for current data on smoking behavior and quit attempts among Medicaid-eligible/indigent youth smokers in order to report accurate data and establish baselines P-3 must be approached in DY2-DY3.

**Process Milestone 3 [P-3]:** Develop and test data systems

**Metric 3 [P-3.1]:** Develop and test data system for tracking and reporting

**Baseline/goals:** Implementation of data system and data systems test(s) to track number of Medicaid-eligible/indigent youth smokers making a quit attempt.

**Data Source:** Database and documentation of data systems test

**Rationale/evidence:** Process milestone P-3 was chosen due to the need for current data on smoking behavior and quit attempts among Medicaid-eligible/indigent youth. In order to report accurate data and establish baselines P-3 must be approached in DY2-DY3.

**Process Milestone 3: Estimated Incentive Payment:** $788,025.00

**Outcome Improvement Target [IT-11.6]:** Other Outcome Improvement Target (Increase Quit Attempts) – Increase quit attempts for 24 hours among .04% of the estimated 1,980 (n = 90) adolescent smokers aged 11 to 18 years in RHP3 counties

**Baseline/Goal:** DY 3 baseline

**Improvement Target:** Enroll 5% of 3 counties’ adolescents in ASPIRE program

**Data Source:** ASPIRE data system and student surveys

**Rationale/evidence:** Quit Attempts is a standard outcomes measure in tobacco research and clinical activities. It has been convincingly demonstrated in hundreds of studies and summarized in the 2008 USPHS Clinical Practice Guideline on Treating Smoking and Nicotine Dependence that the number of quit attempts is highly predicting of the ultimate successful cessation of tobacco use. Therefore, it is imperative that this measure is included in our metrics for the current project.

**Title of Outcome Measure (Improvement Target):** IT-11.6 – Other Outcome
Improvement Target: Increase cessation among adolescents aged 11 to 18 years (Smoking Cessation/Staying Quit)

**Unique RHP outcome identification number(s):** 112672402.3.9

**Outcome Measure Description:**

- **IT-11.6:** Other Outcome Improvement Target (Smoking Cessation/Staying Quit) – 10% (n=200) of enrollees who smoke will be abstinent at the time of follow-up.

  Staying Quit represents a successful quit attempt that results in continuous abstinence for at least 3 months (some researchers use longer time periods, for example at least 6 months). It is a standard outcome used in multiple tobacco control studies and clinical activities. The metric signifies the ultimate long-term success of the smoking cessation interventions among adolescents and adults. We will use this utmost important measure of abstinence to demonstrate the effect of the proposed tobacco cessation activities within the framework of ASPIRE as well as the counseling sessions provided by trained health professionals enrolled in the proposed project.

**Process Milestones:**

- **DY2:**
  - P-1 – Project planning and initiation– engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans along with beginning the process of modernizing the ASPIRE program with its companion tools and resources
  - P-3 – Develop and test data systems and with completing the process of modernizing the ASPIRE program with its companion tools and resources

- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**

- **IT-11.6:** Other Outcome Improvement Target (Smoking Cessation/Staying Quit) – Increase sustained cessation by 10% (n = 200) among the estimated 1,980 smokers in RHP3. Estimated numbers of those staying quit for each year are as follows:

  - DY3: 100 smokers will be sustained quitters
  - DY4: 50 smokers will be sustained quitters
  - DY5: 50 smokers will be sustained quitters

**Rationale:**

This project aims to reduce smoking initiation and facilitate smoking cessation among Medicaid-eligible/indigent youth ages 11 through 18 years old. Importantly, it will address tobacco use among the most vulnerable low-income groups of youth in clinics and schools, involving health...
professionals in sustainable activities that will lead to a dramatic reduction of tobacco use among the target population.

According to the 2012 Report of the Surgeon General entitled, *Preventing Tobacco Use Among Youth and Young Adults*, coordinated, multi-component interventions that combine mass media campaigns, price increases including those that result from tax increases, school-based policies and programs, and statewide or community-wide changes in smoke-free policies and norms are effective in reducing the initiation, prevalence, and intensity of smoking among youth and young adults.

Process milestones P-1 and P-3 were selected for the ASPIRE youth tobacco use prevention and cessation project based on the needs of the target population. To prepare for the project, we will also develop the program infrastructure and improve the program delivery systems (i.e. ASPIRE and provider training).

Improvement target percentages will be based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation and prevention program with respect to tobacco use reduction and susceptibility to tobacco use reduction among low income adolescents.

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD (add outcome amounts over DYs 2-5):** $6,303,150.00
**Title of Outcome Measure (Improvement Target):** IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)

**Unique RHP outcome identification number(s):** 112672402.3.10

**Outcome Measure Description:**
IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- **DY3:** IT-12.6 Numerator: Number of women who completed follow up/diagnostic test(s) with program partner(s) – Improvement percent 50% of those referred for diagnostic test(s) with program partners
- **DY4:** IT-12.6 Numerator: Number of women who completed follow up/diagnostic test(s) with program partner(s) – Improvement percent 50% of those referred for diagnostic test(s) with program partners
- **DY5:** IT-12.6 Numerator: Number of women who completed follow up/diagnostic test(s) with program partner(s) – Improvement percent 50% of those referred for diagnostic test(s) with program partners

**Rationale:**
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the number of women in the program that need diagnostic services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the expansion period of a breast cancer screening program.

**Outcome Measure Valuation:**
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

a. **Data Source:** Stakeholder meeting summaries; Staff meeting summaries  
b. **Goals:** One meeting per clinic  
c. **Rational/Evidence:** Process milestone P-1 was chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of diagnostic services. In order to report accurate data and establish baselines, P-1 must be approached in DY2.  
| Process Milestone 3 [P-3]: Develop and test data systems  
Metric 1 [P-3.1]: Develop and test data system for tracking and reporting  
a. **Data Source:** Develop and test data system for tracking and reporting  
b. **Goals:** Completed data tracking system  
c. **Rational/Evidence:** Process milestone P-3 was chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of diagnostic services. In order to report accurate data and establish baselines, P-3 must be approached in DY3.  
| Process Milestone 3 Estimated Incentive Payment: | $50,074.33 |
| | Year 3  
| | (10/1/2013 – 9/30/2014) |
| Outcome Improvement Target IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)  
a. **Baseline:** 120 women referred for diagnostic test(s) with program partner(s)/Goal: 60 women who follow up with recommended diagnostic test(s) with program partner(s)  
b. **Numerator:** Number of women who completed follow up/diagnostic test(s) with program partner(s) (n=60)  
c. **Denominator:** Number of women referred for diagnostic test(s) with program partners (n=120)  
d. **Data:** EHR reports/Patient records  
e. **Rational/Evidence:** Based on our current Project VALET program, approximately 10% of women screened are referred for diagnostic test(s); hence, the estimated 120 women who will be referred for diagnostic test(s). The use of navigation services and promoting system changes is imperative in reaching the aforementioned outcome measures. For example, to increase the number of women who return for an annual follow up/diagnostic test(s) with program partner(s).  
| | Year 4  
| | (10/1/2014 – 9/30/2015) |
| Outcome Improvement Target IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)  
a. **Baseline:** 150 women referred for diagnostic test(s) with program partner(s)/Goal: 75 women who follow up with recommended diagnostic test(s) with program partner(s)  
b. **Numerator:** Number of women who completed follow up/diagnostic test(s) with program partner(s) (n=75)  
c. **Denominator:** Number of women referred for diagnostic test(s) with program partners (n=150)  
d. **Data:** EHR reports/Patient records  
e. **Rational/Evidence:** Based on our current Project VALET program, approximately 10% of women screened are referred for diagnostic test(s); hence, the estimated 120 women who will be referred for diagnostic test(s). The use of navigation services and promoting system changes is imperative in reaching the aforementioned outcome measures. For example, to increase the number of women who return for an annual follow up/diagnostic test(s) with program partner(s).  
| | Year 5  
| | (10/1/2015 – 9/30/2016) |

**Outcome Improvement Target IT-12.6 Other Outcome Improvement Target: Women in need of diagnostic test(s)**

**Baseline:** 80 women referred for diagnostic test(s) with program partner(s)/Goal: 40 women who follow up with recommended diagnostic test(s) with program partner(s)

**TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD**<br>(add outcome amounts over DYs 2-5): $802,837.98
**Title of Outcome Measure (Improvement Target):** IT-12.6 Other Outcome Improvement Target: Women returning for an annual mammogram per recommended screening guidelines

**Unique RHP outcome identification number(s):** 112672402.3.11

**Outcome Measure Description:**
IT-12.6 Other Outcome Improvement Target: Women returning for an annual mammogram per recommended screening guidelines

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- **DY4:** IT-12.6 Numerator: Number of women ages 40 to 69, who return for their annual screening mammogram through Project VALET, thus demonstrating compliance with ACS screening guidelines – Improvement percent 20% of women screened
- **DY5:** IT-12.6 Numerator: Number of women ages 40 to 69, who return for their annual screening mammogram through Project VALET, thus demonstrating compliance with ACS screening guidelines – Improvement percent 25% of women screened

**Rationale:**
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the women participating in the project that return for an annual mammogram per screening guidelines. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the expansion period of a breast cancer screening program.

**Outcome Measure Valuation:**
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

Title of Outcome Measure (Improvement Target): IT-12.1 – Breast Cancer Screening (HEDIS 2012)

Unique RHP outcome identification number(s): 112672402.3.12

Outcome Measure Description:
IT-12.1 Breast Cancer Screening (HEDIS 2012)

Process Milestones:
- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:
- DY3: IT – 12.1 Number of women aged 40 to 69 that have received an annual mammogram during the reporting period – Improvement percent 166% from previous year
- DY4: IT – 12.1 Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period – Improvement percent 50% from previous year
- DY5: IT – 12.1 Number of women aged 40 to 69 that have received an annual mammogram during the reporting period – Improvement percent 25% from previous year

Rationale:
Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of breast cancer screening services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages are based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the expansion period of a breast cancer screening program.

Outcome Measure Valuation:
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

University of Texas M.D. Anderson Cancer Center
Pass 2
**Category 3: Quality Improvements**

**Title of Outcome Measure (Improvement Target):**
IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

**Unique RHP outcome identification number(s):** 112672402.3.13/Pass 2

**Outcome Measure Description:**
IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)
- Numerator: Number of patients who enroll in Quitline treatment after being connected to the Quitline

**Process Milestones:**
- **DY2:**
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans (protocol)
  - P-3 – Develop and test data systems
- **DY3:**
  - P-3 – Develop and test data systems

**Outcome Improvement Targets for each year:**
- **DY4: IT – 11.6**
  - Numerator: Number of Medicaid-eligible/indigent smokers who enroll in treatment with Quitline – Improvement percent: 35% (N=393)
  - Denominator: Number of Medicaid-eligible/indigent smokers who are connected with the Quitline
  - Data Source: Data from EHR and Alere reports

- **DY5: IT – 11.6**
  - Numerator: Number of Medicaid-eligible/indigent smokers who enroll in treatment with Quitline – Improvement percent: 35% (N=393 additional enrollments)
  - Denominator: Number of Medicaid-eligible/indigent smokers who are connected with the Quitline
  - Data Source: Data from EHR and Alere reports

**Rationale:**
The selected Category 3 Outcome Improvement Target is Medicaid-eligible/indigent smokers who enroll in treatment with the Quitline after being connected with the Quitline. Based on our previous experience with AAC, 35% of smokers connected with the Quitline will enroll in treatment.

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to
smokers in FQHCs. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

This outcome measure corresponds to the overarching goal of the proposed project, to deliver evidence-based smoking cessation treatment to Medicaid-eligible/indigent smokers seeking care in FQHCs and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

**Outcome Measure Valuation:**
We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.
### Unique CAT 3 ID:
112672402.3.13 Pass 2

### Reference Number for RHP PP:
3.IT-11.6

### Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

### Performing Provider Name:
The University of Texas MD Anderson Cancer Center

### Related Category 1 or 2 Projects:
Unique Category 2 project identifier – 112672402.2.7

### Starting Point/Baseline:
Only one FQHC is currently implementing AAC. Smoking status, connection to treatment, and cessation outcomes are not currently, systematically collected in EHR.

### Year 2
(10/1/2012 – 9/30/2013)

**Process Milestone 1 [P-1]:** Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

**Metric 1 [P-1.1]:** Engage stakeholders at participating FQHCs

- Baseline/goal: Monthly meetings with participating FQHC leaders
- Data Source: EHR reports; Alere reports; Project database reports; Stakeholder meeting summaries; Staff meeting summaries
- Rationale: Stakeholders will be involved in AAC from the beginning and will help ensure that systems and processes are tailored for each clinic site.

**Process Milestone 1 Estimated Incentive Payment:** $12,621.33

### Year 3
(10/1/2013 – 9/30/2014)

**Process Milestone 3 [P-3]:** Develop and test data systems

**Metric 1 [P-1.1]:** Develop and test EHR enhancements

- Baseline/goal: Complete upgrades to EHR systems in each clinic
- Data Source: EHR reports; Alere reports; Project database reports; Stakeholder meeting summaries; Staff meeting summaries
- Rationale: AAC provides systems enhancements to electronic health records to capture data required for implementing tobacco clinical practice guidelines.

**Process Milestone 3 Estimated Incentive Payment:**

### Year 4
(10/1/2014 – 9/30/2015)

**Outcome Improvement Target [IT 11.6]:** Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

**Improvement Target:** Numerator: Number of Medicaid-eligible/indigent smokers who enroll in treatment with Quitline. Denominator: Number of Medicaid-eligible/indigent smokers connected to Quitline. – Improvement percent: 35% (N=393)

- Data Source: EHR reports; Alere reports
- Rationale: Based on previous AAC studies, approximately 35% of smokers connected to the Quitline enroll in treatment.

**Outcome Improvement Target Estimated Incentive Payment:**

### Year 5
(10/1/2015 – 9/30/2016)

**Outcome Improvement Target [IT 11.6]:** Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

**Improvement Target:** Numerator: Number of Medicaid-eligible/indigent smokers who enroll in treatment with Quitline. Denominator: Number of Medicaid-eligible/indigent smokers connected to Quitline. – Improvement percent: 35% (N=393 new enrollments)

- Data Source: EHR reports; Alere reports
- Rationale: Based on previous AAC studies, approximately 35% of smokers connected to the Quitline enroll in treatment.

**Outcome Improvement Target Estimated Incentive Payment:**
### Unique CAT 3 ID:
112672402.3.13 Pass 2

### Reference Number for RHP PP:
3.IT-11.6

### Other Outcome Improvement Target (Smoking Cessation – Enroll in Treatment)

Title of Outcome Measure (Improvement Target):

IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Make a Quit Attempt)

Unique RHP outcome identification number(s): 112672402.3.14 /Pass 2

Outcome Measure Description:
IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Make a Quit Attempt)
- Numerator: Number of Medicaid-eligible/indigent smokers enrolled in Quitline treatment that make a quit attempt

Process Milestones:
- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans (protocol)
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:
- DY4: IT – 11.6
  - Numerator: Number of Medicaid-eligible/indigent smokers enrolled in treatment that make a quit attempt – Improvement percent: 50% (N=196)
  - Denominator: Number of Medicaid-eligible/indigent smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports
- DY5: IT – 11.6
  - Numerator: Number of Medicaid-eligible/indigent smokers enrolled in treatment that make a quit attempt – Improvement percent: 50% (N=196 new quit attempts)
  - Denominator: Number of Medicaid eligible/indigent smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports

Rationale:
The selected Category 3 Outcome Improvement Target is Medicaid-eligible/indigent smokers enrolled in Quitline cessation treatment that make a quit attempt. At 6-months post completion of the cessation treatment, patients will be contacted by phone to assess smoking status. The SRNT Smoking Abstinence Questionnaire will be used. Based on our previous experience with AAC, at least 50% of smokers enrolled in Quitline treatment will make a quit attempt.

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to smokers in FQHCs. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.
This outcome measure corresponds to the overarching goal of the proposed project, to deliver evidence-based smoking cessation treatment to smokers seeking care in FQHCs and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

Title of Outcome Measure (Improvement Target): IT-11.6 (Smoking Cessation – Staying Quit)

Unique RHP outcome identification number(s): 112672402.3.15 Pass 2

Outcome Measure Description:

IT-11.6 - Other Outcome Improvement Target: Smoking Cessation – Staying Quit

- Numerator: Number of Medicaid-eligible/indigent smokers enrolled in Quitline treatment that are abstinent at 6 month follow-up

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans (protocol)
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 11.6
  - Numerator: Number of Medicaid-eligible/indigent smokers enrolled in treatment that are abstinent at 6 month follow-up – Improvement percent: 28% (N=110)
  - Denominator: Number of Medicaid-eligible/indigent smokers enrolled in treatment
  - Data Source: Data from EHR and Alere reports, expired CO and self-report data collected from participants and stored in program databases.

- DY5: IT – 11.6
  - Numerator: Number of Medicaid-eligible/indigent smokers enrolled in treatment that will be abstinent at the time of follow-up – Improvement percent: 28% (N=110 additional smokers abstain)
  - Denominator: Number of Medicaid-eligible/indigent smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports, expired CO and self-report data collected from participants and stored in program databases.

Rationale:

The selected Category 3 Outcome Improvement Target is Medicaid-eligible/indigent smokers enrolled in Quitline cessation treatment that will be abstinent at time of follow-up. At 6-months post completion of the cessation treatment, patients will be contacted by phone to assess smoking status. The SRNT Smoking Abstinence Questionnaire will be used. To confirm cessation, participants will be mailed a carbon monoxide test with a self-addressed envelope. Based on Quitline data and the literature, 28% of Medicaid-eligible/indigent smokers enrolled in Quitline treatment are abstinent at 6-month follow-up.

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to...
smokers in FQHCs. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

This outcome measure corresponds to the overarching goal of the proposed project, to deliver evidence-based smoking cessation treatment to smokers seeking care in FQHCs and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

**Outcome Measure Valuation:**

West Houston Medical Center
Pass 1
Title of Outcome Measure (Improvement Target):
OD-3: IT 3.3.1: Potentially Preventable Readmissions

Unique RHP outcome identification number(s): 094187402.3.1

Performing Provider Name/TPI: HCA - West Houston Medical Center TPI/094187402

Outcome Measure Description:
HCA chose this outcome to accompany its project to create a Senior Care Coordinator position in its West Houston facility, who will engage in senior patient navigation of the healthcare continuum. HCA believes one result of that project will be a reduction in potentially preventable readmissions (PPRs) for patients enrolled in the navigator program. HCA expects this result because improved access to primary and preventative care, support, and education are evidence-based methods for reducing deterioration of patients’ conditions upon discharge from an inpatient stay. Too often seniors do not have access to these services, and as a result their health outcomes are negatively impacted and the systemic cost of treating these patients in increased.

Process Milestones:
HCA chose its DY2 and DY3 process milestones in order to develop a system for measuring improvement and to establish a baseline by which to measure improvement in DYs 4-5.

Outcome Improvement Targets for each year:
HCA chose its improvement targets in order to measure the reduction in PPRs once the Senior Care Coordination program has gone into effect. The amount of improvement is TBD until DY3, when HCA will have established a baseline, and can determine a reasonable yet meaningful target for improvement.

Rationale:
HCA selected this outcome measure and improvement target because HCA has identified geriatric patients as one population with a high rate of PPRs. As of the second quarter of 2012, West Houston Medical Center had a 14.3% readmission rate for all cause readmissions within 30 days for the Medicare population for the previous twelve months. This rate represents a performance that is lower than the average for Medicare patients. HCA believes that improving the rate of PPRs will improve patient outcomes, and will reduce the cost of providing care to geriatric patients. The goals of the Waiver are to make healthcare more patient-centered, less episodic and more consistent, and to reduce the cost of care in order to provide services to the ever increasing population of Medicaid and uninsured patients requiring services. This outcome reflects each of these Waiver goals.

Outcome Measure Valuation:
The valuation of each HCA West Houston Category 3 outcome takes into account the degree to which the project accomplishes the triple-aims of the Waiver, addresses community needs, benefits the population served by the project, and the investment required to implement the project. HCA West Houston determined the value of this outcome by assessing the potential impact of increased availability of patient navigation services for geriatric patients. This project will require development of standardized protocols and procedures for identifying, tracking, and following up with geriatric patients.
in an effort to get the patients appropriate care in the appropriate setting. HCA West Houston expects that the associated Category 2 project, a global system to improve outcomes for geriatric patients, will require training to ensure that personnel are prepared to assist in the unique needs of the elderly population. In addition to patient benefits, projects that seek to increase access to ambulatory health care settings will result in an overall cost-savings to the healthcare delivery system. It is clear that the rising costs of healthcare must be curbed to maintain a stable delivery system. Region 3 is focused on getting patients out of the ED for non-acute conditions, and ensuring that each patient has the information and referrals necessary to be seen at a community primary care provider. The valuation also takes accounts for the emphasis that the Region 3 DSRIP work groups have placed on the expansion of access to care for seniors.

Category IV
Narratives and Tables
El Campo Memorial Hospital
Category 4 Population-Focused Improvements - Narrative

Performing Provider Name: El Campo Memorial Hospital (ECMH)
Performing Provider TPI #: 131045004

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – The population at ECMH of the 8 measures listed under Domain 1 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology “sufficiently large” has not been defined at this time. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on the number of potentially preventable admissions for patients by focusing on reducing patient anxiety and increasing patient compliance with discharge instructions and follow-up health care. It is expected that patients will become healthier which will minimize admissions.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Potentially preventable admissions negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing potentially preventable admissions at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for potentially preventable admissions. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

Domain 2: 30-day readmissions (7 measures)

- **Description** – The population at ECMH of the 7 measures listed under Domain 2 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology “sufficiently large” has not been defined at this time. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on the number of potentially preventable 30-day readmissions for patients by focusing on reducing patient anxiety and increasing patient compliance with discharge instructions and follow-up health care. If patients follow their recommended plan of care, it is expected that they are less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Potentially preventable 30-day readmissions...
negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing 30-day admissions at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for 30-day readmissions. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – The population at ECMH of the 64 measures listed under Domain 3 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology “sufficiently large” has not been defined at this time. ECMH suffers from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain. However, ECMH is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Through the implementation of the Patient Experience Training Program, ECMH expects to reduce patient anxiety and increase patient compliance with discharge instructions and follow-up health care which is expected to improve patient satisfaction and ultimately health outcomes.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require ECMH to evaluate its own performance and will allow for organizational change that will be invaluable for ECMH’s patients. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. ECMH values this reporting domain at $10,925 over DY 3-5, requiring local funding of $4,391.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – ECMH will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well ECMH is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. ECMH is committed to preventing this from happening. Additionally, medication management is a primary function that ECMH’s providers need to engage in with patients to avoid readmissions, complications and to promote improved health outcomes outside of the hospital setting. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on patient satisfaction and medication management by focusing on reducing patient anxiety which is expected to increase patient compliance with discharge instructions, follow-up health care and living a healthy lifestyle.
The value ECMH placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from ECMH and how well ECMH performs its function of promoting medication management. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and improving patient satisfaction and medication management at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce overall healthcare costs. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

**Domain 5: Emergency Department (1 measure)**

**Description** – ECMH will measure the admit decision time to ED departure for admitted patients. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on established patients by reducing their anxiety and in turn increasing their healthcare compliance such as seeking preventative health care and living healthy lifestyles. This is expected to reduce the number of visits to the ED by established patients in the ECMH system which would in turn reduce the number of admissions from the ED and ultimately reduce overall healthcare costs.

**Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes and patient dissatisfaction. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. ECMH values this reporting domain at $15,820 over DY 3-5, requiring local funding of $6,360.
## Category 4: Population-Focused Measures

**El Campo Memorial Hospital / 131045004**

### Capability to Report Category 4
- **Milestone:** Status report submitted to HHSC confirming system capability to report Domains 1, 2, 4, 5, and 6.

### Domain 1: Potentially Preventable Admissions (PPAs)
- **Planned Reporting Period:** 1 or 2
- **Domain 1 - Estimated Maximum Incentive Amount**
  - Year 2: $4,894
  - Year 3: $5,235
  - Year 4: $5,690

### Domain 2: Potentially Preventable Readmissions (30-day readmission rates)
- **Planned Reporting Period:** 1 or 2
- **Domain 2 - Estimated Maximum Incentive Amount**
  - Year 2: $4,894
  - Year 3: $5,235
  - Year 4: $5,690

### Domain 3: Potentially Preventable Complications (PPCs)
- **Includes a list of 64 measures identified in the RHP Planning Protocol.**
- **Planned Reporting Period:** 1 or 2
- **Domain 3 - Estimated Maximum Incentive Amount**
  - Year 2: $5,235
  - Year 3: $5,690

### Domain 4: Patient Centered Healthcare
#### Patient Satisfaction - HCAHPS
- **Measurement period for report**
  - Year 2: October 1 – September 30
  - Year 3: October 1 – September 30
  - Year 4: October 1 – September 30
- **Planned Reporting Period:** 1 or 2
  - Year 2: 2
  - Year 3: 2
  - Year 4: 2

#### Medication Management
- **Measurement period for report**
  - Year 2: October 1 – September 30
  - Year 3: October 1 – September 30
  - Year 4: October 1 – September 30
- **Planned Reporting Period:** 1 or 2
  - Year 2: 2
  - Year 3: 2
  - Year 4: 2
- **Domain 4 - Estimated Maximum Incentive Amount**
  - Year 2: $4,894
  - Year 3: $5,235
  - Year 4: $5,690

### Domain 5: Emergency Department
- **Measurement period for report**
  - Year 2: October 1 – September 30
  - Year 3: October 1 – September 30
  - Year 4: October 1 – September 30

Gulf Coast Medical Center
Performing Provider Name: Gulf Coast Medical Center/178815001

Category 4 Project: Population-Focused Improvements

Category 4 Reporting Summary for Domain 1—Potentially Preventable Admissions

- In year 2 system capability to report Domain 1 will be submitted to HHSC.

- Domain 1-RD-1 Potentially Preventable Admissions
  - This performing provider will report on the eight (8) potentially preventable admissions as defined in the Category 4 population-focused improvements.
  - Findings for this domain will begin being reported to HHSC in year 3.
  - Domain Description: Potentially Preventable Admissions relates to this performing provider’s Category 1 Project (Establish Adult Inpatient Psychiatric Unit) in a variety of ways. Common diseases such as those included in this Domain affect individuals of all ages and are frequently a co morbidity of those individuals with mental illnesses. Congestive Heart Failure, Diabetes, Chronic Obstructive Pulmonary Disease and Hypertension are the diagnoses in this Domain that may have the greatest impact with regard to preventing admissions. Those patients with a mental disorder/s that are not under the care of a mental health practitioner and have medical co morbidities are at risk for non-compliance of their treatment plan which results in admission. With the availability of treatment for mental disorders through our project those patients with co morbidities are more likely to be compliant with treatment plans thus preventing an admission.
  - Expected improvement for DY2-DY5 is difficult to determine but it is anticipated to decrease the number of potentially preventable admissions of adult psychiatric patients that have received treatment and have additional medical co morbidities.
  - Domain Valuation:
    - The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500
      - DY 3 $24,500
      - DY 4 $27,500
      - DY 5 $27,500
    - Areas considered when determining valuation for this domain have been addressed in the domain description.
Performing Provider Name: Gulf Coast Medical Center/178815001

Category 4 Project: Population-Focused Improvements

Category 4 Reporting Summary for Domain 2—Potentially Preventable Readmissions—30 Days

- In year 2 system capability to report Domain 2 will be submitted to HHSC.

- Domain 2- RD-2 30 Day Readmissions
  - This performing provider will report on the seven (7) focus areas for 30 day readmissions.
  - Findings for this domain will begin being reported to HHSC in year 3.
  - Domain Description: 30 Day Readmissions relates to this performing provider’s Category 1 Project (Establish An Adult Inpatient Psychiatric Unit) similar to the relation outlined for potentially preventable admission. Individuals with mental health disorders that have not received treatment or are non-compliant with the treatment plan for the mental illness may also be non-complaint with the treatment plan for existing co-morbidities thus resulting in readmission. It is anticipated that the 30 readmission measure –behavioral health and substance abuse - will show the highest impact with regard to readmissions as a result of this performing provider’s Category 1 Project. This provider has selected the Category 3 Outcome Improvement IT-1.18 Follow up after Hospitalization for Mental Illness as it relates to the Category 1 Project. A baseline will be established in year 3 with improvement targets established for year 4 and 5 utilizing baseline findings.
  - Expected Improvement for Y2 to Y5 will be defined from baseline data for the target outcome specifically selected to measure outcomes for the providers Category 1 Project.
  - Domain Valuation:
    The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500.
    
    | Year | Amount |
    |------|--------|
    | DY 3 | $24,500|
    | DY 4 | $27,500|
    | DY 5 | $27,500|

    Areas considered when determining valuation for this domain have been addressed in the domain description.
Performing Provider Name: Gulf Coast Medical Center/178815001

Category 4 Project: Population-Focused Improvements

Category 4 Reporting Summary for Domain 3—Potentially Preventable Complications

- In year 3 system capability to report Domain 3 will be submitted to HHSC.

- Domain 3- RD-3 Potentially Preventable Complications
  - A total of 64 potentially preventable complications will be reported by Gulf Coast Medical Center.
  - Findings for this domain will begin being reported to HHSC in year 4.
  - Potentially Preventable Complications relates to our chosen Category 1 Project involving the establishment of an adult inpatient psychiatric unit. All patients admitted to the proposed unit that have existing co morbidities which are left untreated could possibly have resulting complications. Individuals admitted to the proposed psychiatric unit with co morbidities will receive treatment for their additional medical diagnoses to prevent potential complications.
  - Anticipated improvement in year Y3-Y5 is a decrease in the number of preventable complications.
  - Domain Valuation:
    - The following valuation for this domain for DY4 and DY5 is as follows for a total of $55,000.
    - DY 4 $27,500
    - DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.
Performing Provider Name: Gulf Coast Medical Center/178815001

Category 4 Project: Population-Focused Improvements

Category 4 Reporting Summary for Domain 4 — Patient Centered Healthcare

- In year 2 system capability to report Domain 4 will be submitted to HHSC.

- Domain 4- RD-4 Patient Centered Healthcare
  - This performing provider will report on the two (2) patient-centered healthcare measures as defined in the Category 4 population-focused improvements.
    - Patient Satisfaction: The following themes will be reported to include your care from doctors, your care from nurses, the hospital environment and when you left the hospital.
      - Reporting will begin DY 2 with baseline targets from the acute care settings for this performing provider.
    - Medication Management: All patients discharged from the inpatient setting will be included in reporting of data from this measure. Two measures will be reported by this performing provider to include medications to be taken by the patient and medications not to be taken by the patient.
      - Reporting will begin DY 2 with baseline targets from the acute care settings for this performing provider.

- Domain Valuation:
  - The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500.
    - DY 3 $24,500
    - DY 4 $27,500
    - DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.
Performing Provider Name: Gulf Coast Medical Center/178815001

Category 4 Project: Emergency Department

Category 4 Reporting Summary for Domain 5 — Patient Centered Healthcare

- In year 2 system capability to report Domain 5 will be submitted to HHSC.

- Domain 5 – RD-5 Emergency Department
  - This performing provider will report on admit decision time to ED departure time for admitted patients (NQF 497).
    - Decision time to transfer an emergency patient to another facility ie, decision to make the first call from arrival in transferring ED until call initiated.
    - Threshold of <1 hour for critical patients.
    - This domain does not relate to this performing provider Category 1 Project.

- Domain Valuation
  The following valuation for this domain for DY3 through DY 5 is as follows for a total of $79,500.
  - DY 3 $24,500
  - DY 4 $27,500
  - DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.

Regional Healthcare Partnership Plan
Region 3
2728
Harris County Hospital District Ben Taub General Hospital
Category 4 Population-Focused Improvements - Narrative Template

Performing Provider Name: Harris Health System
Performing Provider TPI #: 133355104

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Harris Health System will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Harris Health System expects that expanding services into primary care clinics will reroute patients away from emergent and inpatient settings and allow for better optimization of care.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Harris Health System will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Harris Health System expects that the assignment of clinical case managers upon discharge will increase patient access to follow-up care and support in the community, thereby preventing the likelihood of a preventable readmission.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.
Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Harris Health System will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Harris Health System is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Harris Health System expects that its expansion of primary care and follow-up of chronic diseases in the primary care setting will reduce the volume of unnecessary utilization of hospital services which can be associated with an unnecessary complication.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Harris Health System will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Harris Health System is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Harris Health System expects improved patient satisfaction in the hospital setting and effective medication management protocols for patients to correlate with Harris Health System’s projects oriented toward expansion of primary care and optimization of chronic disease management.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All
initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 5: Emergency Department (1 measure)

• **Description** – Harris Health System will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. Harris Health System will expand primary care to accommodate patients that utilize the emergency center for primary care. There will also be establishment of urgent care clinics for patients needing acute care after-hours.

• **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

HCA Bayshore Hospital
Performing Provider Name: HCA Bayshore Medical Center (“Bayshore”)
Performing Provider TPI #: 020817501

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Bayshore will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Bayshore expects that its expansion of OB/GYN services in its community clinics will have a positive impact on the number of PPAs for women with manageable obstetric/gynecological conditions that can be treated and/or managed outside of the hospital setting with proper access to primary care. Additionally, the physicians providing the OB/GYN care can provide patients with detection and management of other conditions that lead to PPAs for clients who are otherwise unable to access primary care.

- **Valuation Rationale/Justification** – The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at Bayshore will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Bayshore will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Bayshore expects that the use of telemedicine in HCA’s local EDs could lead to a reduction in PPRs for BH/SA patients because the project aims to place BH/SA patients into the appropriate care setting as quickly and effectively as possible. If these patients receive the care they
need during and after hospitalization, they are much less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for Bayshore patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

**Domain 3: Potentially Preventable Complications (64 measures)**

- **Description** – Bayshore will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Bayshore is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Bayshore values this reporting domain at $457,913 over Demonstration Years 3-5, requiring local funding of $184,080.
Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Bayshore will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Bayshore is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Bayshore hopes that implementing the telepsychiatry into the local HCA facilities will improve satisfaction for BH/SA patients, who currently spend extended amounts of time in the ED when they seek services at the hospital.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Bayshore and how well Bayshore performs its function of promoting medication management. Bayshore is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Houston is costly to patients’ health and to the delivery system, and Bayshore believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

Domain 5: Emergency Department (1 measure)

- **Description** – Bayshore will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. Bayshore’s telepsychiatry project in the local HCA EDs will seek to improve the
admit decision time to ED departure time for BH/SA patients, who often wait days for appropriate placement due to a shortage of providers to perform assessments.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Bayshore values this reporting domain at $663,018 over Demonstration Years 3-5, requiring local funding of $266,533.

HCA West Houston Medical Center
Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – WHMC will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. WHMC expects that assigning care coordinators to seniors who visit WHMC through its Category 1 project will result in senior patients receiving expanded primary care services in the community, reducing the number of PPAs going forward for those patients. More specifically, WHMC hopes that senior patients with chronic diseases will be better able to engage in self-management goals and activities of daily living with the support, education, and services that primary care providers participating with WHMC in this project can offer to a currently underserved patient population.

- **Valuation Rationale/Justification** – The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at WHMC will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – WHMC will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. WHMC expects that the assignment of senior hospital patients to Senior Care Coordinators upon discharge will increase their access to follow-up care and support in the community, thereby
preventing the likelihood of a PPR. WHMC’s Category 3 Outcome is based upon accomplishing a percentage reduction in the number of PPRs for geriatric patients by the end of DY5, by a percentage to be established in DY3.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for WHMC patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

**Domain 3: Potentially Preventable Complications (64 measures)**

- **Description** – WHMC will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and WHMC is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. WHMC expects that its Category 1 project to add a “Senior Care Entrance” to the hospital and provide special beds for geriatric patients will have a positive impact on the PPC rate for the geriatric population seen in the hospital.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. WHMC values this reporting domain at $196,248 over Demonstration Years 3-5, requiring local funding of $78,891.
Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – WHMC will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. WHMC is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. WHMC expects improved patient satisfaction in the hospital setting and effective medication management protocols for seniors to correlate with WHMC’s Category 1 project to provide geriatric-oriented hospital accommodations and care coordination.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from WHMC and how well WHMC performs its function of promoting medication management. WHMC is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients (such as the elderly) in Houston is costly to patients’ health and to the delivery system, and WHMC believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Domain 5: Emergency Department (1 measure)

- **Description** – WHMC will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments,
and other types of providers, and the patients experience poor health outcomes as a result.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Regional Healthcare Partnership Plan Region 3 2748
Matagorda Regional Medical Center
Performing Provider Name: Matagorda Regional Medical Center (MRMC)
Performing Provider TPI #: 1679678767

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – MRMC will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. MRMC expects that its establishment of a Chronic Disease Specialty Clinic (CDSC) in its community will have a positive impact on the number of PPAs for patients with chronic disease conditions by focusing on providing access to specialty services and physicians that support care for a number of key chronic conditions. Through the establishment of the CDSC, patient compliance with specialty referral visits will improve and the ability to manage chronic disease conditions on an ambulatory basis will improve.

- **Valuation Rationale/Justification** – The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at MRMC will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. MRMC values this reporting domain at $92,230 over Demonstration Years 3-5, requiring local funding of $37,076.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – MRMC will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. MRMC expects that the establishment of the Chronic Disease Specialty Clinic (CDSC) will provide a centralized location for determining best practice management of patients with the targeted disease categories. By creating the clinic with the respective specialists, information systems and care coordination will allow patients and their primary care providers to have ready access to expertise that will reduce issues with noncompliance, reduce out of control health crises, and therefore reduce hospital readmissions and unnecessary visits to the emergency department. If these patients receive the care they need during and after hospitalization, they are much less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-
day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for MRMC patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – MRMC will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and MRMC is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. MRMC through the Chronic Disease Speciality Clinic (CDSC) will strive to transform the health care delivery from a disease focused model of episodic care to a patient-centered coordinated delivery model that improves patient satisfaction and health outcomes.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. MRMC values this reporting domain at $63,699 over Demonstration Years 3-5, requiring local funding of $25,607.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – MRMC will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. MRMC is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. MRMC hopes that implementing the Chronic Disease Speciality Clinic will improve satisfaction for MRMC patients, by coordinating care with providing access and early intervention and preventing patients from getting “lost” in the health care system.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive
from MRMC and how well MRMC performs its function of promoting medication management. MRMC is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Matagorda County is costly to patients’ health and to the delivery system, and MRMC believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary and specialty care to have the maximum beneficial impact for the community. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.

**Domain 5: Emergency Department (1 measure)**

- **Description** – MRMC will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. MRMC’s Chronic Disease Speciality Clinic project will assist ED providers by decreasing the number of disease related crisis visits to the ED and transforming care for the targeted populations from one of fragmented resources to an organized system of followup for primary and specialty services. MRMC will seek to improve the admit decision time to ED departure time for MRMC patients, who often wait days for appropriate placement due to a shortage of providers to perform assessments.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.
## Category 4: Population-Focused Measures

Memorial Hermann Hospital
Category 4 Population-Focused Improvements - Narrative Template

Performing Provider Name: Memorial Hermann Hospital  
Performing Provider TPI #: 137805107

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Memorial Hermann Hospital (“Memorial”) will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Memorial plans to implement Category 1 DSRIP projects with the goal of addressing the root causes of potentially preventable admissions. Specifically, this project will expand regional primary care capacity by establishing primary care clinics. Memorial expects that this project will reduce potentially preventable admissions by making it easier for more patients to receive the primary care they need in appropriate outpatient settings rather than inpatient or emergent settings. Memorial also believes that the increased availability of primary care services in the community will allow potentially harmful and expensive health conditions to be detected and treated early and inexpensively.

- **Valuation Rationale/Justification** – The value Memorial has placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Memorial will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Memorial expects that its improvement of access to primary care services through establishing additional primary care clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases (e.g., diabetes and congestive heart failure) and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in
conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

**Domain 3: Potentially Preventable Complications (64 measures)**
- **Description** – Memorial will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Memorial is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Memorial expects that its expanded provision of primary care and of follow-up care for chronic diseases will reduce the volume of unnecessary utilization of hospital services, thus alleviating one of the problems which can result in unnecessary complications for inpatients. The ongoing quality improvement activities which constitute an essential part of Memorial’s Category 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout Memorial.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $1,724,544 over Demonstration Years 3-5.

**Domain 4: Patient-Centered Healthcare (2 measures)**
- **Description** – Memorial will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Memorial is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Memorial expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Memorial’s projects to strengthen primary care access in the community and to promote and facilitate management of chronic conditions, because satisfied patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).
• **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Memorial and how well Memorial performs its primary care and post-discharge functions. Memorial is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in our community is costly to patients’ health and to the delivery system, and Memorial believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

**Domain 5: Emergency Department (1 measure)**

• **Description** – Memorial will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with one of the overall aims of the waiver: to reduce inappropriate use of the ED. One cause of extended ED departure times results from an overcrowded ED. Memorial intends to expand access to primary care for patients who currently are unable to access primary care due to factors such as the lack of primary care providers in the community, and to improve follow-up care for discharged patients diagnosed with chronic health conditions, which Memorial expects will reduce the number of inappropriate ED visits and therefore allow for better management of ED processes such as admit decisions.

• **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.
**Category 4 Table:** The RHP plan shall include the planned semi-annual reporting period, 1 (October 1 – March 31) or 2 (April 1 – September 30) for each domain or measure.

- **DY 2 incentive payments are for submission to HHSC of a status report that describes the system changes the hospital is putting in place to prepare to successfully report Category 4 measures in DYS 3-5.**
- **Category 4 reporting shall begin in DY 3 for Domains 1, 2, 4, 5, and 6 (optional), in DY 4 for Domain 3, and continue for all Domains through DY 5.**

OakBend Medical Center
Performing Provider Name: OakBend Medical Center
Performing Provider TPI #: 127303903

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – OakBend Medical Center (“OakBend”) will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. OakBend plans to implement a Category 2 DSRIP project with the goal of addressing the root causes of potentially preventable admissions. Specifically, this project will provide navigational services to targeted patients who are at high risk of disconnect from institutionalized healthcare. OakBend expects that this project will reduce potentially preventable admissions by making it easier for more patients to receive the primary care they need in appropriate outpatient settings rather than inpatient or emergent settings. OakBend also believes that this project will allow expensive health conditions to be detected and treated early and inexpensively.

- **Valuation Rationale/Justification** – The value OakBend has placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at OakBend will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – OakBend will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. OakBend expects that its improvement of access to primary care services through establishing additional primary care providers will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR.

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases (e.g., diabetes and congestive heart failure) and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in
conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs at OakBend will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

**Domain 3: Potentially Preventable Complications (64 measures)**

- **Description** – OakBend will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and OakBend is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. OakBend expects that its expanded provision of primary care and of follow-up care for chronic diseases will reduce the volume of unnecessary utilization of hospital services, thus alleviating one of the problems which can result in unnecessary complications for inpatients. The ongoing quality improvement activities which constitute an essential part of OakBend’s Category 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout OakBend.

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. OakBend values this reporting domain at $335,074 over Demonstration Years 3-5.

**Domain 4: Patient-Centered Healthcare (2 measures)**

- **Description** – OakBend will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. OakBend is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. OakBend expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with OakBend’s projects to strengthen primary care access in the community and to promote and facilitate management of chronic conditions, because satisfied patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).
• **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from OakBend and how well OakBend performs its primary care and post-discharge functions. OakBend is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease is costly to patients’ health and to the delivery system, and OakBend believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

**Domain 5: Emergency Department (1 measure)**

• **Description** – OakBend will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with one of the overall aims of the waiver: to reduce inappropriate use of the ED. One cause of extended ED departure times results from an overcrowded ED. OakBend intends to expand access to primary care for patients who currently are unable to access primary care due to factors such as the lack of primary care providers in the community, and to improve follow-up care for discharged patients diagnosed with chronic health conditions, which OakBend expects will reduce the number of inappropriate ED visits and therefore allow for better management of ED processes such as admit decisions.

• **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.
Category 4 Table: The RHP plan shall include the planned semi-annual reporting period, 1 (October 1 – March 31) or 2 (April 1 – September 30) for each domain or measure.
- **DY 2** incentive payments are for submission to HHSC of a status report that describes the system changes the hospital is putting in place to prepare to successfully report Category 4 measures in DYs 3-5.
- **Category 4** reporting shall begin in **DY 3** for Domains 1, 2, 4, 5, and 6 (optional), in **DY 4** for Domain 3, and continue for all Domains through **DY 5**.

Rice Medical Center
Performing Provider Name: Rice Medical Center (“Rice”)  
Performing Provider TPI #: 212060201

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Rice will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Rice expects that its provision of expanded primary and specialty care services through the Family Practice Obstetrician project, the establishment of the Wallis clinic, the use of telemedicine for specialty consults, the addition of ENT specialty services at Rice, and the expansion of the East Bernard Clinic will reduce the number of PPAs over the life of the Waiver. Additionally, Rice hopes that its project to conduct outreach to patients with chronic diseases and its project to create a Certified Diabetes Teaching Center will enable targeted patients to engage in self-management goals and activities of daily living that are essential to preventing PPAs. Finally, Rice intends for its ImmTrack project to reduce the number of PPAs related to flu and other illnesses that can be prevented through immunizations.

- **Valuation Rationale/Justification** – The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in Colorado and Wharton Counties will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Rice will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Rice expects that its outreach activities will allow chronically ill patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR. With specific regard to diabetic patients, Rice expects its Certified Diabetes Teaching Center to assist diabetic patients in addressing the short- and long-term complications that led to their hospitalizations, and prevent subsequent relapses. Finally, the expanded number and size of clinics in the community will increase the resources available to patients upon discharge from an inpatient stay.
Valuation Rationale/Justification - The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs in Colorado County will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Many hospitalizations at Rice can be linked to manageable chronic diseases that Rice intends to address with its project to expand access to primary care. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

Domain 3: Potentially Preventable Complications (64 measures)

Description – Rice will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Rice is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Rice expects that its Category 1 project to expand access to primary care will reduce the strain on Rice’s hospital resources (including staff, space, and equipment). Rice also hopes that its ImmTrack project will have a positive impact on PPCs that can be related to duplicative or missed immunizations.

Valuation Rationale/Justification - The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Rice values this reporting domain at $158,067 over Demonstration Years 3-5, requiring local funding of $65,298.

Domain 4: Patient-Centered Healthcare (2 measures)

Description – Rice will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Rice is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Rice expects improved patient satisfaction in the hospital setting and effective medication management protocols for
inpatients to correlate with Rice’s Category 1 project to expand primary care access, and its projects targeting chronic diseases, because satisfied patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Rice and how well Rice performs its function of promoting medication management. Rice is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in Colorado County is costly to patients’ health and to the delivery system, and Rice believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

**Domain 5: Emergency Department (1 measure)**

- **Description** – Rice will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with Rice’s Category 2 project to reduce inefficiencies the ED, because an effect of this project’s successful implementation will be to reduce overall ED treatment, admit, and discharge times. One cause of extended ED departure times is an overcrowded ED, so Rice also intends to expand access to primary care in the community and to provide support to chronically ill patients, which Rice expects will reduce the number of inappropriate ED visits.

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.
**Category 4 Table**: The RHP plan shall include the planned semi-annual reporting period, 1 (October 1 – March 31) or 2 (April 1 – September 30) for each domain or measure.

- **DY 2 incentive payments are for submission to HHSC of a status report that describes the system changes the hospital is putting in place to prepare to successfully report Category 4 measures in DYs 3-5.**
- **Category 4 reporting shall begin in DY 3 for Domains 1, 2, 4, 5, and 6 (optional), in DY 4 for Domain 3, and continue for all Domains through DY 5.**

</tbody>
</table>

Category 4 focuses on reporting six (6) key measure sets designed to gain information and understanding on the health needs of low-income, Medicaid or uninsured patients and their families. St. Joseph Medical Center has selected two Behavioral Health projects (Medical-Psychiatric Unit and Partial Hospitalization Program for Behavioral Health/Substance Abuse) which in turn will facilitate the reduction of unnecessary hospitalizations for those disease conditions which are prevalent in Harris County and the surrounding regions.

In Texas, potentially preventable admissions have been linked to secondary diagnoses of mental illness/substance abuse or in the following medical conditions:

- Congestive Heart Failure (CHF)
- Diabetes
- Chronic Obstructive Pulmonary Disease (COPD) – 44.4% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse;
- Asthma – 37.0% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse;
• Bacterial Pneumonia – 32.5% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse (Texas Health and Human Services Commission, 2012).

• Influenza Immunization

St. Joseph Medical Center recognizes that there is a high prevalence of co-occurring mental health and medical issues in the United States. Currently patients with medical illnesses develop depression 10-14% of the time. The rate increases as the severity of illness increases. In many cases, the diagnosis of depression is missed 50% of the time in primary care settings. Likewise, people with a mental illness experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus hindering the treatment of any other medical conditions. Taking into account the lack of beds in Harris County and the surrounding areas, St. Joseph Medical Center has chosen to open new services designed to provide behavioral health patients with better wrap around services. The Medical-Psychiatric Unit will provide the right care in the right setting. This unit will care for those patients who previously did not receive needed behavioral health care because their medical diagnosis became a priority. It can also care for patients who did not have their medical needs addressed due to their overriding psychiatric disease. The Partial Hospitalization Program will provide behavioral health and/or substance abuse patients with the support and skills to care for themselves in the residential setting.

The medical psychiatry program will effect this domain by ensuring that those patients who are more medically complex are not admitted to a pure medical unit or a pure psychiatry unit. These admissions will instead admit to a more appropriate inpatient setting where both of these issues are addressed. The second proposal, expansion of outpatient services will ensure that those patients who do not require hospitalization are given better wrap-around services and thus avoid re-admission to the inpatient psychiatry unit.

Valuation
The valuation of the Medical-Psychiatric Unit and the Partial Hospitalization Program takes into account the degree to which the projects accomplish community needs, the population served (both number of people served and complexity of patient needs), and investment required to implement the projects. The projects seek to reduce the cost of delivering inpatient care in the community by addressing quality of care in a cost efficient model and attempting to reduce unnecessary admissions through better health outcomes for patients. It is the expectation that the opening of a 12 bed Medical-Psychiatric Unit to treat patients with co-occurring medical and psychiatric needs and the Partial Hospitalization Program that will teach patients the skills to care for themselves in the residential setting and will decrease the number of admissions to the hospital.

</tbody>
</table>

Domain 1 description for “Potentially Preventable Admissions” applies to Domain 2 “Potentially Preventable Readmissions”. Currently, there are two medical-psychiatric units in Houston. There is the unit at Ben Taub and another unit at Memorial Southwest. According to statements both by their own staff and from referrers within the community, these units stay consistently full and it is virtually impossible to get a patient from another facility to either one of these units.

St. Joseph Medical Center has selected two Behavioral Health projects (Medical-Psychiatric Unit and Partial Hospitalization Program for Behavioral Health/Substance Abuse) with the underserved population in mind. Both of these programs will facilitate the reduction of unplanned readmissions to the Hospital within 30 days of discharge for those disease conditions which are identified.

In Texas, potentially preventable readmissions within 30 days have been linked to secondary diagnoses of mental illness/substance abuse or in the following medical conditions:

- Congestive Heart Failure (CHF)
- Diabetes
St. Joseph Medical Center recognizes that there is a high prevalence of co-occurring mental health and medical issues in the United States. Currently patients with medical illnesses develop depression 10-14% of the time. The rate increases as the severity of illness increases. In many cases, the diagnosis of depression is missed 50% of the time in primary care settings. Likewise, people with a mental illness experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus readmissions to the Hospital for reassessment of a continuing condition or for the treatment of other medical conditions occurs more frequently. Taking into account the lack of beds in Harris County and the surrounding areas, St. Joseph Medical Center has chosen to open new services designed to provide behavioral health patients with better wrap around services. The Medical-Psychiatric Unit will provide the right care in the right setting for the those patients who previously did not receive needed behavioral health care because their medical diagnosis became a priority. It also can care for those patients who did not have their medical needs addressed due to their overriding psychiatric disease. The Partial Hospitalization Program will provide behavioral health and/or substance abuse patients with the support and skills to care for themselves in the residential setting. The Program focuses on medication compliance, living situation stability, therapy and aftercare needs. It is expected that these two new programs working together will reduce the recidivism and/or readmissions to the Hospital.

The medical psychiatry program will effect this domain by ensuring that those patients who are more medically complex are treated in the right setting from the onset of their care. By treating those patients in the right setting, we anticipate a reduction in re-admissions. The second proposal, expansion of outpatient services will ensure that those patients who do not require hospitalization are given better wrap-around services and thus avoid re-admission to the inpatient psychiatry unit.

Valuation
The valuation of the Medical-Psychiatric Unit and the Partial Hospitalization Program takes into account the degree to which the projects accomplish community needs, the population served (both number of people served and complexity of patient needs), and investment required to implement the projects. The projects seek to reduce the cost of delivering inpatient care in the community by addressing quality of care in a cost efficient model and attempting to reduce unplanned readmissions through better health outcomes for patients. It is the expectation that the opening of a 12 bed Medical-Psychiatric Unit to treat patients with co-occurring medical and psychiatric needs and the Partial Hospitalization Program that will teach patients the skills to care for themselves in the residential setting will decrease the number of readmissions to
the Hospital. It is foreseen that any reduction in readmissions in any population will result in cost savings and appropriate utilization of resources. The baseline goal will be determined by opportunity analysis and needs assessment results.

*St. Joseph Medical Center will not submit data related to Pediatric Asthma as we do not have a Pediatric Unit. Pediatric patients requiring admission are transferred to one of the Pediatric Hospitals located in the Houston area.

A: **Category 4: Population-Focused Improvements**

Title: Required Reporting Domains
Project Identification Number: 181706601
Project Option Reference Number: Domain 3 – Potentially Preventable Complications (PPCs)
Performing Provider Name / TPI: St. Joseph Medical Center – 181706601

<tr>
<td>2.15.1 – Design, implement and evaluate interventions to improve care transitions from the mental health and/or substance abuse disorder - Create a Med/Psych Unit on the campus of St Joseph Medical Center</td>
</tr>
</tbody>
</table>

Congestive heart failure, chronic obstructive pulmonary disease, diabetes, stroke, behavioral diseases, etc. are chronic diseases. Individuals must learn self-management skills and make lifestyle changes to effectively manage these illnesses to avoid or delay complications. For these reasons self-management education and medical management are the cornerstone of treatment for people with chronic diseases. Enhancing the chronic disease inpatient programs and developing new outpatient programs designed to help individuals manage their illness will result in improved patient outcomes for this population.

In addition, the implementation of *Lean* methodology will be instrumental in the improvement of patient care and safety, the reduction of hospital-acquired conditions, and increased staff efficiency through the promotion of evidence based medical and nursing practice at the facility.
Domain 3 focuses on multiple quality outcome measures and specifically on Sepsis Mortality (#35 on PPC list) as a potentially preventable condition / healthcare acquired condition. Research on sepsis reveals that there is a wide variation in healthcare practice in different geographical areas which have not kept in pace with the evolving science of healthcare to ensure evidence based practice. Treatment for sepsis is an example of how variation in healthcare can be reduced. This, in turn, will have an effect on mortality and the number of patients developing infections and/or potentially preventable complications. St. Joseph Medical Center aspires to reduce the sepsis mortality rate by utilizing the nationally recommended “Bundle” concept included in the Surviving Sepsis Campaign which is a global initiative.

Valuation

Based on HealthGrades data regarding the average cost of treating a sepsis patient and the average length of stay for a sepsis patient at St. Joseph Medical Center, it is projected that reducing the number of complications in the aforementioned diagnoses will facilitate improvement and can potentially save $4,012,000 over a five (5) year period.

This project has been designed to improve patient care and patient satisfaction through the provision of adequate services, adequate hours, adequate resources, and optimal healthcare services reflective of evidence based practice standards. These factors will be monitored through use of the HCAHPS tool for the inpatient programs. HCAHPS has been implemented on every medical-surgical floor and St Joseph’s Hospital clearly recognizes the need to ensure that the inpatient program will have HCAHPS measures installed for the medical – psychiatry program. HCAHPS does not currently have a measurement tool for outpatient monitoring of patient satisfaction. We will develop and monitor patient satisfaction through an internal tool developed at another facility within the hospital system. This tool was specifically designed to monitor patient satisfaction on an outpatient basis. Through sustained utilization of the HCAHPS patient satisfaction tools and reports during this project’s subsequent years, St. Joseph Medical Center will monitor the results and continue to identify opportunities for improvement. Appropriate corrective actions will be developed for the provision of appropriate patient centered care, whereby patient satisfaction will be maintained and improved.

A secondary focus of this project is appropriate Medication Management. The Lean methodology will facilitate the redesign and implementation of an improved patient centered medication management program limited to the inpatient setting. This program will promote patient safety through the appropriate prescribing, dispensing, administering, and, in particular, using of prescribed medications upon discharge from the hospital.

**Valuation**

Patient satisfaction is a major determinant of return “business” for a healthcare facility and is also a factor which influences reimbursement for services rendered. Applying the efficiency, effectiveness, and safety aspects of the Lean methodology to the medication management process will eliminate numerous non-value steps in the current process which in turn will promote cost savings.

**A: Category 4: Population-Focused Improvements**

Title: Required Reporting Domains

Project Identification Number: 181706601

Project Option Reference Number: Domain 5 – Emergency Department (ED)

Performing Provider Name / TPI: St. Joseph Medical Center – 181706601

<table>
<thead>
<tr>
<th>PROJECT RELATIONSHIPS TO DOMAIN</th>
</tr>
</thead>
<tbody>
<tr>
<td>Category 1</td>
</tr>
<tr>
<td>2.17.1 – Design, implement,</td>
</tr>
<tr>
<td>and evaluate interventions</td>
</tr>
</tbody>
</table>
The purpose of expanding primary care services includes the goal of reducing the number of potentially avoidable visits to the St. Joseph Medical Center’s Emergency Department and provide the right care in the right setting. People with depression or other behavioral disease experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus hindering the treatment of any other medical conditions. In addition, depression occurs in 10 to 27 percent of stroke survivors and usually lasts about one year. It occurs in 40-65% of patients who have a heart attack and in 25% of cancer patients. People with bipolar disorder are also at higher risk for thyroid disease, migraine headaches, heart disease, diabetes, obesity, and other physical illnesses.

Baseline data indicates that these diagnoses are among the most frequently recorded non-emergent ED visits which can actually be cared for in the primary care system. When these same patients arrive in our ED, they will be screened for a secondary diagnosis of mental health illness and, if this diagnosis is potentially present, the patient will be given diagnosis-specific education and then be directed to the most appropriate primary or inpatient care setting that provides mental health resources for follow up. This may be our Medical-Psychiatric Unit, our Partial Hospitalization Program for outpatient treatment or to Intake for inpatient behavioral health care. This realignment will result in better health outcomes, patient satisfaction, appropriate ED utilization, and reduced cost of services.

The medical psychiatry program will effect this domain by ensuring that there is a care setting for the medical/psychiatry patient. Having this program should result in decreased times that patients languish in the ED environment. The second proposal, expansion of outpatient services will ensure that those patients who do not require hospitalization are given better wrap-around services and thus avoid re-admission to the inpatient psychiatry unit and actually reduce the number that simply “show up or walk into” to the ED for care.
Valuation

It is projected that the number of patients screened for mental health illness in the ED will increase by 2-3% over the baseline number. A primary goal is to measure the results of strategies identified. It is anticipated that education of the frequent ED patients will assist them in identifying and accessing those healthcare provider services most appropriate for their care in the future; this, in turn, will promote cost savings and proper provider utilization. In addition, it will promote more timely treatment of those patients presenting to the ED with more serious medical conditions. Time monitoring of when these patients arrive to the ED to when they are evaluated to when their disposition/decision to admit or not admit will be tightly monitored in a log that displays this information.

</table>

It is the intent of St. Joseph Medical Center to report on RD-6. Optional Domain: Initial Core Set of Health Care Quality Measures which will require the collection and submission of data on hospital services provided for children in the Medicaid and CHIP programs, as well as Medicaid eligible adults. In addition, data analysis will be performed with resultant recommendations
communicated for corrective actions to be taken related to those measures which indicate opportunities for improvement.

Valuation
The significant values of this reporting domain will be healthcare cost savings, appropriate healthcare utilization, improved patient outcomes, and improved patient satisfaction.

St. Joseph Medical Center will not submit data related to Pediatric Intensive Care Unit as we do not have a Pediatric Care Unit. Pediatric patients requiring admission to an ICU are transferred to one of the Pediatric Hospitals located in the Houston area.

St. Luke's Episcopal Hospital
Category 4 Population-Focused Improvements

Performing Provider Name: St. Luke’s Episcopal Hospital
Performing Provider TPI #: 127300503
Pass I project - 2.12.1- Develop, implement and evaluate standardized clinical protocols and evidence-based care delivery model to improve care transitions: Transitional Care for Chronic Disease
Pass 2 project – 2.2.2 –Apply evidence based care management model to patients identified as having high-risk health care needs – Identification and Treatment of Patients with Hepatitis C.

The domains would be applicable to both projects.

Domain 1: Potentially Preventable Admissions (8 measures)
  • Description Most measures require the number of residents age 18 or older living in the RHP counties to determine the denominator. This data would need to be provided by the state. Behavioral health and substance abuse admission rate would not be measurable since our facility does not provide psychiatric or substance abuse services.
  • Valuation - $507,703
  • Rationale/Justification - One of the goals of the project, as well as the Region’s goals, is to increase reliance on primary care settings and to create a bridge to community based providers of primary care. Stable, ongoing primary care relationships are vital to reducing year-over-year readmission rates. We believe our continuum of care once developed will reduce year-over-year admissions by 30% of those patients enrolled and successfully placed in a primary care home.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)
  • Description We will be able to report data for all areas in this domain with the exception of behavioral health and substance abuse admission 30-day readmission rate. Since we do not provide psychiatric or substance abuse services, we would not be able to report this data.
  • Valuation – $507,703
  • Rationale/Justification - The impact of the project can be tracked through readmissions. The goal would be to reduce readmissions. One of the most powerful interventions to reduce 30-day readmissions in the CHF population is rapid access to a care provider within 7 days of hospital discharge. The Transitional Care Clinic will meet this need and therefore achieve a reduction in 30-day readmissions of 30%, consistent with current literature supporting this intervention.

Domain 3: Potentially Preventable Complications (64 measures)
  • Description We will be able to report data for all areas in this domain.
  • Valuation - $351,064
  • Rationale/Justification – The value placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Complications of care are often the result of unplanned deterioration. The ability to rapidly intervene and within the context of a care continuum, enhanced patient activation will occur.
**Domain 4:** Patient-Centered Healthcare (2 measures)
- **Description** We will be able to report data for all areas in this domain.
- **Valuation** - $507,703
- **Rationale/Justification** - The value placed on this domain is based upon the value the hospital attributes to understanding how well is it serving its patients and the health/financial impacts of patient satisfaction in improving self-management, patient follow up and perceived quality of life and care. Transition to stable primary is one goal of this program. The development of relationships with CBO’s will facilitate and serve as a connector.

**Domain 5:** Emergency Department (1 measure)
- **Description** We will be able to report data for all areas in this domain.
- **Valuation** - $507,706
- **Rationale/Justification** - More engaged patients with facilitated access to primary care should reduce unnecessary ED visits. Though not a specific goal of this project, this is one of the metrics easily monitored for those individuals who become enrolled in the program.

**Optional Domain 6:** Children and Adult Core Measures (8 measures) **N/A**
- **Description** We have opted out of reporting for this domain.
- **Valuation**
- **Rationale/Justification**

Texas Children's Hospital
Performing Provider involved with Category 4: Texas Children’s Hospital/139135109

- Domain 1: Potentially Preventable Admissions (8 measures)
- Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)
- Domain 3: Potentially Preventable Complications (64 measures)
- Domain 4: Patient-Centered Healthcare (2 measures)
- Domain 5: Emergency Department (1 measure)
- Optional Domain 6: Children and Adult Core Measures (8 measures)

Domain Descriptions RD1: Potentially Preventable Admissions:
RD1.1, 1.2, 1.4, 1.5 and 1.7 are not applicable to the patient population we serve when using the denominator (Patients over age 18 years old acute care facilities) the the number of admissions at a pediatric hospital 18 years or older is relatively small and these patients tend to be a much sicker population (for example patients suffering from Cystic Fibrosis, Neurological disorders, cardiac anomalies or other). Other acute care hospitals having to report PPRs with an adult population will have a mix of healthy and sick adults in this domain.

RD1.3 Behavior Health and Substance Abuse Admission Rate- As a core pediatric principle in preventative medicine and for any patient accessing care through the Pavilion for Women early recognition of abuse patterns is critical for better health outcomes. The expansion of access allowed for through our Category 1 and 2 projects provides us with the opportunity to diagnose our patient population earlier to mitigate behavioral or substance abuse issues.

RD1.6 Pediatric Asthma- Transitions of care for any chronic disease population such as those we are working to expand access for in our Category 1 and 2 projects, would benefit from a measure such as emergency center utilization for asthma care. Our anticipated result is that we will see a decrease in this utilization as we increase correct asthma plan implementation.

RD1.8 Influenza Immunization- Texas Children’s has a process in place to remind all patients the need to get an influenza immunization. Additionally, we provide free vaccines to all parents of in our inpatient population. We will continue to monitor influenza vaccinations to ensure our high risk populations are protected.

Domain Descriptions: Potentially Preventable Readmissions:
RD2.1, 2.2, 2.3, 2.4 and 2.5 are not applicable to the patient population we serve, when using the denominator (Patients over age 18 years old acute care facilities) the the number of admissions at a pediatric hospital 18 years or older is relatively small and these patients tend to be a much sicker population (for example, patients suffering from Cystic Fibrosis, Neurological disorders, cardiac anomalies or other). Other acute care hospitals having to report PPRs with an adult population will have a mix of healthy and sick adults in this domain ratio. Should Texas Children’s Hospital be required to report on these domains, we request that we work with HHSC and CMS to create a measure that is relevant to the pediatric and young adult population for these PPR categories.

RD2.6 Pediatric Asthma is a high priority of Texas Children’s because we see such a large, high risk population of children impacted by this condition. We expect to have a reduction in our 30
day readmission rate, specifically, those seen in our Category 1 and 2 expansion projects (e.g. pulmonology, allergy and immunology). Our expansion to subspecialty care will help drive patients to the right level of care at the right time.

RD2.7- When using the denominator (Patients over age 18 years old acute care facilities) the the number of admissions at a pediatric hospital 18 years or older is relatively small and these patients tend to be a much sicker population (for example, patients suffering from Cystic Fibrosis, Neurological disorders, cardiac anamolies or other). Other acute care hospitals having to report PPRs with an adult population will have a mix of healthy and sick adults in this domain ratio.

Domain Descriptions RD3: Potentially Preventable Complications:
Currently we are taking our clinical process models and populating them into our Enterprise Data Warehouse (EDW) to better understand and identify gaps in care. We expect that increasing the number of people who have correct access to care will improve the quality of care provided. Our clinical system integration allows us to perform rapid cycle process improvement initiatives specific to our high risk patients. These PDSAs allow us to more efficiently and effectively improve care delivery and ultimately outcomes and create or achieve high quality care standards.

A multi-year contract by CMS was awarded to the Ohio Children’s Hospitals’ Solutions for Patient Safety (OCHSPS), a non-profit organization comprised of the eight children’s hospitals in Ohio. Texas Children’s Hospital, is one of 26 children’s hospitals working with OCHSPS as part of its Partnership for Patients initiative – a priority project designed to reduce hospital inpatient harm by 40% and readmissions by 20% over a 3 year period.

Domain Descriptions RD4: Patient Satisfaction
RD4.1 HCAHPS is not the patient satisfaction tool or survey we use to measure care from doctors, care from nurses and the hospital environment while a patient is in admitted to discharge. We use Press Ganey survey tools and will certainly report these measures, using this valid measuring tool, and disseminate those findings to both internal and external stakeholders.

RD4.2 Medication Management- This is a specific target of our ongoing process improvement initiative using our electronic medical record to identify medications for all inpatient populations that we serve including all subspecialty populations needing to be transferred to reduce medication errors and have accurate reconciliation.

Domain Descriptions RD5: Emergency Department: We are currently initiating the process of measuring departure to ED to time of admission. We hope to demonstrate stronger links between data management centers (Epic and Enterprise Data Warehouse, Disease and medication registries) and call centers to improve patient transfers and reduce diversions. It is our hope this will lead to a reduction in time wasted when a patient is transferred in or out of our facility due to lack of clinical information to provide the appropriate level of care.

A multi-year contract by CMS was awarded to the Ohio Children’s Hospitals’ Solutions for Patient Safety (OCHSPS), a non-profit organization comprised of the eight children’s hospitals in Ohio. Texas Children’s Hospital, is one of 26 children’s hospitals working with OCHSPS as part
of its *Partnership for Patients* initiative – a priority project designed to reduce hospital inpatient harm by 40% and readmissions by 20% over a 3 year period.

OCHSPS is the only pediatric-focused effort in the country. OCHSPS will assist network hospitals in developing a measurement strategy, sharing data, applying High Reliability Organization theory, and using Quality Improvement Science to affect significant reduction in patient harm. Participating children’s hospitals will focus on the following areas of harm:

- Adverse drug events (ADE)
- Catheter-associated urinary tract infections (CAUTI)
- Central line-associated blood stream infections (CLABSI)
- Injuries from falls and immobility
- Pressure ulcers
- Surgical site infections
- Ventilator-associated pneumonia (VAP)
- Preventable readmissions
- Obstetrical adverse events
- Venous thromboembolism
- Serious Safety Events (SSE)

This federally funded collaborative will have training opportunities in leadership methods, error prevention behavior best practices, cause analysis, etc. Texas Children’s Hospital would like to leverage this training and spread this knowledge to our Region 3 stakeholders to improve their quality efforts, improve care and decrease patient harm.

Should Texas Children’s Hospital be required to report on these domains, we request that we work with HHSC and CMS to create a measure that is relevant to the pediatric and young adult population for these PPR categories.

**Domain Valuation:** All of our project’s values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.\(^1\) Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.\(^3\) Our valuation also includes an increase in the patient’s quality of life. We are using a conservative Quality Adjusted Life Year (“QALY”) per year and a percentage of that QALY for the pediatric population.\(^2\) The QALY is used as a one-time improvement in the quality of life, even though we know the patient’s quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of

\(^1\) Regional Healthcare Partnership Plan, 2802 Region 3.
the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

Texas Children’s Hospital, located in Houston, is the largest free standing children’s hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children’s is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children’s supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

The Methodist Hospital
Patient Data and Quality Reporting: Domains 1 - 5

The Methodist Hospital System (Methodist) has been proactive with regard to federal quality and data reporting requirements. Methodist also currently submits administrative, coded, de-identified data to Texas Health Care Information Collection (THCIC). Once HHSC determines the nature of the data to be reported and the technical specification for reporting, Methodist will develop the appropriate data reporting for Category 4 Domains 1 through 5 and respective measures.

Domain 1, 2, and 3 are based on 3M’s APR-DRGs. Methodist is in the process of implementing MIDAS, a software system that is a 3M partner and utilizes its reporting methodology. MIDAS is a staged implementation which is expected to be in place in 2Q 2013. The system covers Inpatient, Outpatient and Emergency Department patient visit details which are chained encounters.

Domain 4 contains two components: a) Patient-centered health care or patient satisfaction data and b) Medicaid Management. These are currently addressed by two separate reporting systems. Patient satisfaction measures are managed by Press Ganey, which utilizes a survey tool that includes the HCAHPS standard questions. The data is reported to CMS for use in Hospital Compare. Medication management is a functionality of MethOD, our electronic medical record (EMR). The EMR contains the following: home medication list, inpatient medication orders, home to inpatient reconciliation, patient transfer medication reconciliation, medication administration, patient refusal of medication administration, and discharge medication documentation. HHSC currently receives reports from providers in XML formats. Methodist has the capability to provide reports in XML. Once HHSC determines the specific data to be collected and reported, Methodist will evaluate the data capture reporting capability.

Domain 5 relates to Emergency Department admit to departure length of time. HHSC will need to determine whether the approach to this is a core measure approach or a patient management approach. In the event that HHSC seeks to capture core measurement information the MIDAS system discussed above would be expected to capture that information. If the data sought is strictly patient management aimed at arrival date/time and date/time of patient disposition then an ED management system, MedHost, could be utilized for the data collection and reporting.

Category 4 Valuation: Methodist will utilize the 10% valuation for Domains 1 – 5 with an equal spread between domains and measures.

Domain Descriptions: A description of how Category 4 measures relate to the project/outcomes.

Because the DSRP project submitted relates to Care Coordination for Behavioral Medicine patients seen in the Emergency Department, the following Category 4 Domains are specific to the project which Methodist will design and implement. Data will be collected, analyzed and interventions developed for care coordination to reduce admissions, readmissions, patient satisfaction, medication management, complications, and emergency department patient management.
RD-1. Potentially Preventable Admissions

3. Behavioral Health and Substance Abuse Admission rate (based on other selected PPA primary diagnoses)

RD-2. 30-day Readmissions

3. Behavioral health & Substance Abuse: 30-Day Readmissions

RD-3. Potentially Preventable Complications (PPCs)
Hospital performing providers subject to required Category 4 reporting must report on the 64 PPC measures listed below in DY 4-5: #36 Acute Mental Health Changes

RD-4. Patient-centered Healthcare

1. Patient Satisfaction
2. Medication management

RD-5. Emergency Department
Admit decision time to ED departure time for admitted patients (NQF 0497)
a. Decision Time to transfer an emergency patient to another facility (not Transport Time), i.e. decision to make the first call from arrival in transferring ED until call initiated. Recommend threshold of < 1 hour for critical patient.

We expect our project, 137949705.2.1, to have a direct and significant positive impact on domains RD1, RD2 & RD5. Our project is a care coordination effort for patients who suffer from behavioral health conditions. Many of these patients visit our hospitals and emergency departments for acute and non-acute treatment. Our goal is to reduce admissions and readmissions for this target population through care management and helping these patients find appropriate primary behavioral health in an ambulatory care setting. Through these processes we expect to reduce the utilization of our emergency departments for such primary behavioral health services.

Regional Healthcare Partnership Plan

Region 3

2810
The Methodist Willowbrook
Performing Provider Name: Methodist Willowbrook Hospital

TPI: 140713201

Patient Data and Quality Reporting: Domains 1 - 5

The Methodist Hospital System (Methodist) has been proactive with regard to federal quality and data reporting requirements. Methodist also currently submits administrative, coded, de-identified data to Texas Health Care Information Collection (THCIC). Once HHSC determines the nature of the data to be reported and the technical specification for reporting, Methodist will develop the appropriate data reporting for Category 4 Domains 1 through 5 and respective measures.

Domain 1, 2, and 3 are based on 3M’s APR-DRGs. Methodist is in the process of implementing MIDAS, a software system that is a 3M partner and utilizes its reporting methodology. MIDAS is a staged implementation which is expected to be in place in 2Q 2013. The system covers Inpatient, Outpatient and Emergency Department patient visit details which are chained encounters.

Domain 4 contains two components: a) Patient-centered health care or patient satisfaction data and b) Medicaid Management. These are currently addressed by two separate reporting systems. Patient satisfaction measures are managed by Press Ganey, which utilizes a survey tool that includes the HCAHPS standard questions. The data is reported to CMS for use in Hospital Compare. Medication management is a functionality of MethOD, our electronic medical record (EMR). The EMR contains the following: home medication list, inpatient medication orders, home to inpatient reconciliation, patient transfer medication reconciliation, medication administration, patient refusal of medication administration, and discharge medication documentation. HHSC currently receives reports from providers in XML formats. Methodist has the capability to provide reports in XML. Once HHSC determines the specific data to be collected and reported, Methodist will evaluate the data capture reporting capability.

Domain 5 relates to Emergency Department admit to departure length of time. HHSC will need to determine whether the approach to this is a core measure approach or a patient management approach. In the event that HHSC seeks to capture core measurement information the MIDAS system discussed above would be expected to capture that information. If the data sought is strictly patient management aimed at arrival date/time and date/time of patient disposition then an ED management system, MedHost, could be utilized for the data collection and reporting.

Category 4 Valuation: Methodist will utilize the 10% valuation for Domains 1 – 5 with an equal spread between domains and measures.

Domain Descriptions: A description of how Category 4 measures relate to the project/outcomes.

Because the DSRP project submitted relates to Care Coordination for Behavioral Medicine patients seen in the Emergency Department, the following Category 4 Domains are specific to the project which Methodist will design and implement. Data will be collected, analyzed and interventions developed for care coordination to reduce admissions, readmissions, patient
satisfaction, medication management, complications, and emergency department patient management.

RD-1. Potentially Preventable Admissions

3. Behavioral Health and Substance Abuse Admission rate (based on other selected PPA primary diagnoses)

RD-2. 30-day Readmissions

3. Behavioral health & Substance Abuse: 30-Day Readmissions

RD-3. Potentially Preventable Complications (PPCs)
Hospital performing providers subject to required Category 4 reporting must report on the 64 PPC measures listed below in DY 4-5: #36 Acute Mental Health Changes

RD-4. Patient-centered Healthcare

1. Patient Satisfaction
2. Medication management

RD-5. Emergency Department
Admit decision time to ED departure time for admitted patients (NQF 0497)

a. Decision Time to transfer an emergency patient to another facility (not Transport Time), i.e. decision to make the first call from arrival in transferring ED until call initiated. Recommend threshold of < 1 hour for critical patient.

We expect our project 140713201.2.1, to have a direct and significant positive impact on domains RD1, RD2 & RD5. Our project is a care coordination effort for patients who suffer from behavioral health conditions. Many of these patients visit our hospitals and emergency departments for acute and non-acute treatment. Our goal is to reduce admissions and readmissions for this target population through care management and helping these patients find appropriate primary behavioral health in an ambulatory care setting. Through these processes we expect to reduce the utilization of our emergency departments for such primary behavioral health services.

2815
Tomball Regional Hospital
Category 4 Population-Focused Improvements - Narrative Template

Performing Provider Name: Tomball Regional Medical Center (“Hospital”)
Performing Provider TPI #: 288523801

Domain 1: Potentially Preventable Admissions (2 measures)

- **Description** – Tomball Regional Medical Center will report on the 2 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions for COPD, flu and pneumonia, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. By increasing access to primary care for the indigent and uninsured, this project will improve the quality of health for this population by managing chronic conditions and preventing acute cases from escalating to the point of requiring hospital services.

- **Category 3 outcomes**: IT-2.5 Tomball Regional Medical Center goal is to reduce the COPD admission rates from 267, by 6 in DY 3, 12 in DY 4 and 15 in DY 5

- **Category 3 outcomes**: IT-2.10 Tomball Regional Medical Center goal is to reduce flu and pneumonia admissions from 594 in 2012 by 12 in DY 3, 24 in DY 4 and 30 in DY 5.

- **Valuation Rationale/Justification** – The value Tomball Regional Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at Hospital will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Tomball Regional Medical Center values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Tomball Regional Medical Center will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Tomball Regional Medical Center will work with the Indigent Clinic and provide access to medical specialists in order to establish follow-up protocols for the maintenance of chronic conditions, and thereby reduce the readmission rates for these services.

- **Category 3 outcomes**: IT-3.1 Tomball Regional Medical Center goal is to reduce the 30-day potentially preventable all-cause readmission rate from 13% currently to 10% by DY5

- **Valuation Rationale/Justification** - The value Tomball Regional Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a
The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for Hospital patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Tomball Regional Medical Center values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Tomball Regional Medical Center will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Hospital is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated.

- **Valuation Rationale/Justification** - The value Tomball Regional Medical Center placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital’s patients and the hospital’s operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Tomball Regional Medical Center values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Tomball Regional Medical Center will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient’s willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Hospital is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital’s providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Tomball Regional Medical Center believes that with clinical protocols and discharge education, patients will receive proper follow-up care to improve their overall health and outcomes.

- **Valuation Rationale/Justification** - The value Tomball Regional Medical Center placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Hospital and how well Hospital performs its function of promoting medication management. Hospital is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Houston is costly to patients’ health and to the delivery system, and Hospital believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Tomball
Regional Medical Center values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

**Domain 5: Emergency Department (1 measure)**

- **Description** – Tomball Regional Medical Center will measure the ED visits quantities for the level I and II evaluation and management services for the defined patient population. This measure is important because patients often languish in hospital EDs due to lack of access to primary care in an outpatient setting. Reducing the unnecessary ED visits will improve the throughput of the more critically ill patients and thereby improve the health of the community served within the ED.

- **Valuation Rationale/Justification** - The value Tomball Regional Medical Center placed on this domain is based upon the value the Tomball Regional Medical Center attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Tomball Regional Medical Center values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

- **Category 1 or 2 expected patient benefits**: The project seeks to increase primary care clinic visits in DY4 by 1,300 and 1,339 in DY5.

- **Category 3 outcomes**: IT-9.2 Tomball Regional Medical Center goal is to reduce the ED utilization for the lower level acuity visits by 48 DY3, 96 DY4 and 120 DY5.
### Category 4: Population-Focused Measures

University of Texas-M.D Anderson
Category 4: Population-Focused Improvements (Hospitals only)

- The University of Texas MD Anderson Cancer Center / 112672402

- Domain Descriptions:
  - Domain 1: Potentially Preventable Admissions (8 measures)
    - Measures: Congestive Heart Failure Admission Rate; Diabetes Admission Rates; Behavioral Health and Substance Abuse Admission Rate; Chronic Obstructive Pulmonary Disease or Asthma Admission Rate; Hypertension Admission Rate; Pediatric Asthma; Bacterial Pneumonia Immunization; and Influenza Immunization
    - The five Category 2 DSRIP projects (112672402.2.1; 112672402.2.2; 112672402.2.3; 112672402.2.4; and 112672402.2.5) that we are submitting will all be implemented in a community setting. Our projects will have no impact on any of the Potentially Preventable Admissions in Reporting Domain 1 (RD-1). The intent of RD-1 is related to hospital admission and our projects are community-based. The only project that would have any connection to the measures (Influenza Immunization) is project # 112672402.2.1. It is a colorectal screening project is implemented with an influenza vaccination effort.
  - Reported: Calendar Year starting in DY3
  - Source: Texas Health and Human Services Commission, via risk adjusted 3M Tool

- Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)
  - Measures: Congestive Heart Failure (HF): 30-Day Readmissions; Diabetes: 30 Day-Readmissions; Behavioral health & Substance Abuse: 30-Day Readmissions; Chronic Obstructive Pulmonary Disease (COPD): 30-Day Readmissions; Stroke: 30-Day Readmissions; Pediatric Asthma: 30-Day Readmissions; and All-Cause: 30-Day Readmissions
    - The five Category 2 DSRIP projects (112672402.2.1; 112672402.2.2; 112672402.2.3; 112672402.2.4; and 112672402.2.5) that we are submitting will all be implemented in a community setting. These projects will have no impact on any of the Potentially Preventable Readmissions in Reporting Domain 2 (RD-2). The five Category 2 DSRIP projects (112672402.2.1; 112672402.2.2; 112672402.2.3; 112672402.2.4; and 112672402.2.5) that we are submitting will all be implemented in a community setting. They will have no impact on any of the Potentially Preventable Admissions in Reporting Domain 1 (RD-1).
  - Reported: Calendar Year starting in DY3
  - Source: Texas Health and Human Services Commission (HHSC), via risk adjusted 3M Tool
  - The University of Texas MD Anderson Cancer Center is a PPS-exempt cancer hospital and does not have to report on Potentially Preventable Readmissions. HHSC will identify exemptions for RDs 1-3 when making the data available to providers each DY.
○ **Domain 3: Potentially Preventable Complications (64 measures)**
  - The five Category 2 DSRIP projects (112672402.2.1; 112672402.2.2; 112672402.2.3; 112672402.2.4; and 112672402.2.5) that we are submitting will all be implemented in a community setting. The outcomes of those projects will have no impact on the 64 measures listed in Potentially Preventable Complications/Reporting Domain 3 (RD-3) as the 64 measures are related to hospital-based care/services.
  - Reported: Calendar Year starting in DY4
  - Source: Texas Health and Human Services Commission

○ **Domain 4: Patient-Centered Healthcare (2 measures)**
  - Patient satisfaction scores and Medication Management figures are monitored and are reported monthly as a deliverable on the Dash Board in Static.
  - Reported: 12-month periods for the following DYS:
    - DY3: 10/01/2013 to 09/30/2014
    - DY4: 10/01/2014 to 09/30/2015
    - DY5: 10/01/2015 to 09/30/2016
  - Source: The University of Texas MD Anderson Cancer Center
  - Measures:
    - **Patient Satisfaction** – The reporting of the measures must be limited to the inpatient setting only.
    - **Medication Management** – The reporting of the measures must be limited to the inpatient setting only. Two measures will be reported by PPs required to report Medication Reconciliation Metric (Medication reconciliation levels in discharged inpatient population derived from NQF 0646).
  - Projects’ Relationship to Domain 4 Measures:
    - Our five Category 2 projects (112672402.2.1; 112672402.2.2; 112672402.2.3; 112672402.2.4; and 112672402.2.5) will not be implemented in an inpatient setting. Since both measures of Domain 4 are specific to inpatient settings, none of our five Category 2 projects will have a direct impact on Patient Satisfaction or Medication Management.

○ **Domain 5: Emergency Department (1 measure)**
  - The number of patients who come to The University of Texas MD Anderson Cancer Center’s emergency room that require transfer to another institution is negligible and are not large enough to produce statistically valid data.
  - Reported: 12-month periods for the following DYS:
    - DY3: 10/01/2013 to 09/30/2014
    - DY4: 10/01/2014 to 09/30/2015
    - DY5: 10/01/2015 to 09/30/2016
  - Source: The University of Texas MD Anderson Cancer Center
• **Domain Valuation:**
  The percent allocation for Category 4 was distributed evenly across the all of the reporting measures for each DY. Whereas, the University of Texas MD Anderson Cancer Center is exempt from Domain 2, the percent allocation for each DY has been distributed evenly among the remaining four Domains and their corresponding Milestones and Reporting Domains as applicable.
