Coronavirus (COVID-19)
Home and Community Support Services Agencies (HCSSAs),
Including Hospice Inpatient Units
Frequently Asked Questions

On March 13, 2020, Governor Greg Abbott declared a state of disaster for all counties in Texas due to the COVID-19 pandemic.

The Texas Health and Human Services Commission (HHSC) is committed to sharing pertinent COVID-19 information with all HCSSAs via this regularly updated Frequently Asked Questions (FAQs) document. This FAQ document was revised and reorganized on August 26, 2020.

With each update, new questions will be identified with the date that they were added. If guidance changes, it will be identified in red font as added or deleted text. Questions regarding these FAQs can be directed to Long-term Care Regulatory Policy and Rules at 512-438-3161 or LTCRPolicy@hhs.texas.gov.

The guidance provided in this FAQ document is intended to reduce the spread of COVID-19 among agency clients and staff. The guidance provided is based on state licensing standards and requirements governing Home and Community Support Services Agencies (HCSSAs) in 26 Texas Administrative Code (TAC), Chapter 558, as well as best practice and CDC recommendations.

Notice to HCSSAs with Medicare, Medicaid and Contract Agreements -
HCSSAs that participate in Medicare or contract for Medicaid or other programs must also follow applicable federal regulations, applicable state program rules and contracts, and policy guidance for their contracted programs, including guidance related to reimbursement requirements.

All HCSSAs are responsible for monitoring the following websites for changes to guidance and requirements:

- The Health and Human Services Commission
- The Texas Department of State Health Services
- The Centers for Disease Control and Prevention
- The Centers for Medicare and Medicaid Services

02/09/22
Agencies with documented cases of COVID-19 among staff or clients will be subject to survey and inspection activities to ensure compliance with licensing standards and conditions of participation, if applicable.

The questions in this FAQ are grouped into the following categories:

- Administrative Responsibilities
- Client Care
- COVID-19 Screening and Documentation
- Hospice
- Infection Control Survey Tools
- Inpatient Hospice
- Personal Protective Equipment - Supplies
- Personal Protective Equipment - Use
- Reporting COVID-19 Cases
- Return to Work
- Visits via Telecommunications
- Resources

<added 02/03/22> CMS Guidance for the Interim Final Rule – Medicare and Medicaid Programs; Omnibus COVID-19 Health Care Staff Vaccination

The Centers for Medicare and Medicaid Services has issued Quality Safety & Oversight Memo QSO-22-11.

This memo states CMS published an interim final rule with comment period (IFC) that establishes requirements regarding COVID-19 vaccine immunization of staff among Medicare- and Medicaid-certified providers and suppliers. The guidance in the memorandum specifically applies to the state of Texas.

Hospice details are outlined in Attachment C
Home Health details are outlined in Attachment G <added 02/03/22>

Administrative Responsibilities

Which HCSSAs are required to send in reports for the newly enacted
Senate Bill 809/Rider 143?
Answer: All HCSSAs agencies, including PAS agencies, are required to report for Senate Bill 809/Rider 143. The report form and additional information for the report are available in a PDF format. These reports are due monthly, and the first report was due October 1, 2021. An FAQ page is available for review if HCSSAs have questions about the reporting requirements.

In addition, HHSC is granting a “grace period” to help providers come into compliance if they fail to meet any deadlines between October 1, 2021, and November 30, 2021. While the deadlines to report will not change, HHSC will not take any actions against a provider as long as the provider submits all the required reports due between October 1, 2021, and November 30, 2021.

Does HHSC have guidance on how to comply with OSHA requirements for control of COVID-19?
Answer: HHSC cannot advise on HCSSA compliance with OSHA requirements for control of COVID-19. The HCSSA rules in Title 26 of the Texas Administrative Code in Chapter 558 do not address specific standards for OSHA Emergency Temporary Standards (ETS) requirements for this purpose. However, a HCSSA must be aware of and follow all applicable OSHA requirements for the agency’s provider type, and any infection control standards imposed by OSHA for healthcare providers for the protection of its staff and others. Please refer to the OSHA FAQs webpage for compliance with OSHA ETS requirements and applicability to the agency. Additional information may be available through the webinars on the ETS for healthcare setting.

Where OSHA and HHSC requirements overlap, agencies must ensure compliance with the stricter standard. Agencies are encouraged to consult with an attorney and human resources professionals for advice on protection of employees and contractors.

Is there a difference in guidance for mitigating the Novel Coronavirus versus the emerging COVID-19 variants?
Answer: At this time, the CDC and DSHS do not recommend any additional or different steps to address the Delta Variant. All guidance and rules provided by HHSC for HCSSA providers should be utilized for COVID-19, regardless of variant.

Does HHSC have documents for HCSSAs to use to provide client and staff education about COVID-19? If not, can HHSC suggest some topics for client and staff education?
Answer: HHSC does not have specific client education documents. An agency’s governing body or administrator should develop procedures with the best guidance
available from the CDC, local, state and federal health departments, and relevant regulations. That said, an agency should dispel myths related to such things as handmade sanitizers (they are not effective or recommended by the CDC) and social distancing and wearing a mask or face covering (they are highly recommended).

For example, clients and household members can refuse visits by families, neighbors, and agency staff. A good source of information is CDC’s How to Protect Yourself and Others. Agency staff can also provide accurate information about how to get the vaccine, testing in the area, the need to stay in isolation or quarantine as appropriate, and the conditions under which a person might need to be hospitalized.

**To practice physical distancing, can a HCSSA close its office and arrange for its office staff to telework during this pandemic?**

**Answer:** Yes, the HCSSA can temporarily close its office to walk-in traffic during this pandemic in accordance with the agency’s policies. The HCSSA must:

- Forward its office phone to a teleworking staff during office hours; and
- Post a notice on the front door of the office stating:
  - that the office is temporarily closed to lessen the spread of COVID-19; and
  - the phone number to call during office hours.

The HCSSA does not need to notify HHSC of the temporary office closure.

**What should an agency do if attendants refuse shifts? We do not have enough staff due to daycare closures, illness, and exposure risks.**

**Answer:** This is where the agency’s emergency preparedness and response plan is essential. Implement the agency’s staff back-up plans, such as having arranged for a household member to provide services in an emergency. The household member would have agreed and been trained for an emergency such as a pandemic. Ultimately, an agency must document all its efforts to ensure adequate staff and that services are provided to clients. An agency also must communicate with the client’s physician related to any missed visits.

**Should a HCSSA email HHSC Long-term Care Regulation if staff are denied access to a facility?**

**Answer:** Yes. HCSSAs are encouraged to send an email to LTCRpolicy@hhs.texas.gov that includes a description of the situation, the name and location of the facility, the name and location of the HCSSA, and the name and phone number of a contact person for the HCSSA.
Some assisted living facilities are using their expanded visitation emergency rule to deny our agency staff entry in the facility. These are the same agency staff who were previously allowed to enter to provide essential services. What should our agency do?

Answer: The emergency rule for assisted living facilities specifically allows for persons providing critical assistance, which includes home health and hospice workers, to enter the assisted living facility if they pass the COVID-19 screening. (See 26 TAC, §553.2003, subsections (e) and (f) and definition of “persons providing critical assistance” in subsection (a)(12).) Please note the definition of an “essential caregiver” is not the same as the definition of “providers of essential services.” An agency can convey this information to the facility, or an agency can send an email to HHSC per the answer to the previous question above. <added 02/03/22> PL 2021-33, released on September 2, 2021, also addresses the authority to enter long-term care facilities. <added 02/03/22>

Is a PAS agency attendant’s annual employee evaluation signature exempt due to COVID-19? Can the evaluation be conducted over the phone?

Answer: Licensing rules (26 TAC, §558.246(4)) require personnel records to contain performance evaluations. The rule does not dictate how an annual employee evaluation is to be conducted. Nor does the rule require a “signature.” But it’s important for an agency to show the performance evaluation was shared and discussed with the employee, as well as how the agency followed-up on any performance problems. Further, there are ways to acknowledge receipt or understanding other than by signature on the actual document. An email acknowledgement of receipt and understanding of the evaluation from the employee would suffice.

Does an agency have to initiate its Emergency Preparedness Plan every time there is a hurricane warning? How do we determine if we MUST initiate the plan?

Answer: An agency should initiate its emergency preparedness plan when the agency anticipates a negative impact on the agency and/or its clients in any geographic location in the agency’s service area.

Can HCSSAs Still Request Free Antigen COVID-19 Testing Kits?

Answer: HCSSAs can still request free BinaxNOW or Care Start antigen COVID-19 test kits. The test kits are for testing any HCSSA staff, client, or household
member. Providers can request the free antigen COVID-19 test kits by filling out the attestation form which includes instructions for requesting the free COVID-19 testing kits for each eligible provider type.

Providers can then submit a completed attestation form to the LTCR Regional Director in the region in which the provider is located. For a map of the regions and contact information for regional directors, click link below. [https://hhs.texas.gov/about-hhs/find-us/long-term-care-regulatory-regional-contact-numbers](https://hhs.texas.gov/about-hhs/find-us/long-term-care-regulatory-regional-contact-numbers)

A HCSSA must attest to adhere to certain training and reporting requirements and have either:

- Current Clinical Laboratory Improvement Amendment Certificate of Waiver;
- Current CLIA laboratory certificate.

Agencies do not have to have a nurse to administer the BinaxNOW antigen tests. BinaxNOW tests require the individual administering the test to have either taken the Abbott training, or be a clinician with the appropriate education and training to administer the tests.

<added 02/03/22> The administration of COVID-19 testing is outside the purview of the services a PAS agency may provide to clients. If a PAS agency employs an RN and chooses to obtain a CLIA waiver in order to provide testing for staff, the RN may administer testing for staff under their professional nursing license and not under the license of the agency. While BinaxNOW allows for RNs and individuals who have taken the Abbott training to administer tests, HHSC as the regulatory agency for HCSSAs requires the PAS agency to adhere to the limitations of the license. <added 02/03/22>.

<added 02/03/22> We are a PAS agency with a CLIA waiver and would like to conduct testing. Can we hire someone to come in and conduct testing utilizing our CLIA waiver?
**Answer:** A HCSSA cannot contract with an outside individual to perform tests under the HCSSA’s CLIA waiver unless that individual is hired as a “contract employee” as dictated by employment law. If the individual was hired as an employee or contract employee of the HCSSA, they would be under the governance of the agency and would therefore be able to complete testing for that agency. The “contract employee” is not the same as a contract individual being hired to come in to perform a specific task. An individual contracted to come in and perform testing in place of an agency employee would need to be operating the testing under their own professional licenses or auspices. <added 02/03/22>

**We are a private pay PAS agency. Since we are providing more PPE than in the past, what is your suggestion to cover this cost, which is NOT built into the hourly rate. What are your rules for recouping this cost?**

**Answer:** HHSC Regulatory does not address the cost of doing business in its licensure rules; however, please note that some private pay PAS agencies have adjusted their hourly rate to include the additional cost of PPE.

The emergency HCSSA rule says to make essential visits only, yet our agency received a letter from HHS mandating we do Personal Care Services visits in the member’s home. Which directive should we follow?

**Answer:** The state emergency rule (§558.960(j)) directs an agency to comply with a more restrictive requirement than the emergency rule if directed to do so by an applicable authority. In this case, HHSC (or an MCO) is directing a contractor to make all scheduled in-home visits to provide Personal Care Services to its members.

Suppose our agency staff who provides services to a resident in an ALF tests positive for COVID-19. Is our agency responsible for notifying the ALF and the resident and any other resident our staff came into contact within the ALF or outside the ALF?

**Answer:** Although HCSSAs are not required by law or rule to notify the assisted living facility, the agency should notify the ALF because it would help prevent the spread of COVID-19. By rule, an agency must develop and enforce a policy to prevent the spread of infectious and communicable diseases. Additionally, it is possible the contractual agreement between the agency and facility stipulates such reporting requirements for agency staff and facility staff.

**Now that a COVID vaccine is available, will HHSC require all HCSSA employees to be vaccinated?**
**Answer** - HHSC does not have the authority to require a HCSSA employee to get the COVID-19 vaccine. The decision is between the HCSSA and the employee/staff/contractor/volunteer. However, HHSC encourages HCSSA employees/staff/contractors/volunteers to get the vaccine if appropriate to their individual health status and medical conditions.

**Are HCSSAs required to direct their staff to get tested for COVID-19? If so, how often?**

**Answer** - HCSSAs are not required to test their staff for COVID-19.

**Are agencies required to notify clients/patients/family if an employee tests positive for COVID-19? For example, if a nurse who takes care of five clients tests positive for COVID-19, must the agency notify all five clients and their families?**

**Answer** – The agency should notify the clients because it would help prevent the spread of COVID-19. By rule, an agency must develop and enforce a policy to prevent the spread of infectious and communicable diseases.

**What is the protocol for a staff member who has received the COVID-19 vaccine but was later exposed? The staff will test positive no matter what. So, then what happens?**

**Answer:** We must first clarify that obtaining the COVID-19 vaccine will not result in the staff testing positive for COVID-19. The CDC states that “neither the recently authorized and recommended vaccines nor the other COVID-19 vaccines currently in clinical trials in the United States can cause you to test positive on viral tests, which are used to see if you have a current infection.” HHSC encourages HCSSAs to review CDC’s [Facts about COVID-19 Vaccines](#).

Regarding a staff member who has received the COVID-19 vaccine and is subsequently exposed to someone who might be infected with the virus, [CDC guidance](#) states: <updated 02/03/22> Due to the rapidly changing nature of CDC recommendations, agencies must review the [CDC guidance](#) when determining work restrictions for staff who have or have not received all COVID-19 vaccines and booster doses. <updated 02/03/22>

**For those staff who have received both rounds of the vaccine, would they need to continue to self-screen?**

**Answer:** Yes.
**Does an agency have to document when a staff or client receives a COVID-19 vaccination?**

**Answer:** A HCSSA is not required to document when a staff or client receives a COVID-19 vaccination, unless the HCSSA has a policy to do so. However, it is considered a best practice.

**Some of our agency staff have been able to get vaccinated, which is great. Now we’re getting requests from clients and families requesting that only vaccinated staff be sent to their homes to provide services. Our agency is not able to accommodate these requests. What should we do?**

**Answer:** There are some steps an HCCSA can take to respond to these requests. The first step is to educate the client and family that a staff member can choose to decline vaccination and about the effectiveness of PPE. Also, the agency can initiate back-up services if that will address the request. Next, the agency can encourage the client’s physician or practitioner to speak with client/family regarding the importance of services being provided and the effectiveness of PPE. As a last resort, the agency can explain to client/family the agency’s inability to accommodate their request and that discharge is the only remaining option. An agency that discharges a client must comply with 26 TAC §558.295.

**Should we post client educational information on our agency’s website? Because information changes so quickly, we’ve been referring clients to the websites of the CDC and local and state authorities.**

**Answer:** A HCSSA is not required to post client educational information on its website specifically. A HCSSA determines what information to provide and how it will be provided (e.g., printed, electronic, verbal) based on the needs of its clients and families.

**Client Care**

**Can HCSSAs administer monoclonal antibody therapy via an intravenous or subcutaneous route?**

**Answer:** A HCSSA licensed as home health or hospice agency may administer monoclonal antibody therapies with a physician’s order. The HCSSA must have policies and procedures for the safe administration of medications via intravenous or subcutaneous routes.

**What is an essential visit?**
**Answer:** An essential visit is one that includes a service that must be delivered to ensure the client's health and safety, such as medication administration or wound care. This is determined on a case-by-case basis and according to the client’s need for the service on the day of the scheduled visit. Regarding activities of daily living (ADLs) such as meal prep, bathing, and dressing, those could be considered essential services if lack of service delivery would have a negative impact on the client’s health or safety. Back-up services provided by a family member or friend may eliminate the need for an essential visit by agency staff.

**Does an agency have to continue to provide services to a client who is diagnosed with COVID-19?**

**Answer:** If the service is determined to be an essential service, yes, the HCSSA must provide it unless back up service can be implemented. Preventing hospitalization should be the goal, if possible. With the agreement of the client, agency staff can enter the home. However, the agency must adhere to all CDC guidelines for the use of PPE, such as goggles, N95 respirator, gloves, and disposable gown. The agency must reschedule all non-essential services to a time when the client has tested negative for COVID-19, has been fever-free for at least 24 hours without the aid of medications to reduce fever, or is symptom-free. See CDC’s guidance for Discontinuation of Transmission-Based Precautions and Disposition of Patients with COVID-19.

**Is performing an assessment an essential visit, or could that be done by some other means?**

**Answer:** If an assessment is not required where the services are to be delivered and can be adequately performed via telecommunications, HHSC encourages an agency to use authorized telecommunications to perform the assessment.

**Does a HCSSA have to admit a client with COVID-19?**

**Answer:** HHSC licensing rules do not require a HCSSA to admit a client with COVID-19. However, an agency might be required to admit an individual based on the agency's contract with payor source (such as Medicaid).

**Should agencies check in daily with clients who have COVID-19?**

**Answer:** An agency can decide, on a case-by-case basis, if it would be in the best interest of the client to receive daily calls from staff. Agencies are in a unique position to assist based on knowledge of the client’s needs and an existing connection. A client who lives alone or with an elderly spouse would likely benefit from having a concerned staff contact them to assist in coordination of care,
especially since symptoms can change quickly and a person’s condition can become
dire within a matter of hours. The same is true for staff who have COVID-19; an
agency can have a human resources policy that directs a supervisor to maintain
frequent contact with a staff who is suspected or confirmed to have COVID-19.

**What is the typical timeframe for an individual to become symptomatic after exposure to a person who is infected with COVID-19?**

*Answer:* If infected, an individual may have symptoms within 2 to 14 days after
exposure. Some individuals who become infected after exposure never develop
symptoms. These individuals are asymptomatic carriers of the COVID-19 virus:
they have the virus and are contagious, usually don’t know it they have it, and
don’t have symptoms.

**Should an agency document when a staff or client is tested for COVID-19?**

*Answer:* Yes. An agency should document all known and disclosed test results for
both staff and clients.

**Can our home health agency provide flu shots to our employees and clients?**

*Answer:* Yes. Please note that 26 TAC, §558.303 (Standards for Possession of
Sterile Water or Saline, Certain Vaccines or Tuberculin, and Certain Dangerous
Drugs) would apply.

<added 02/03/22> **Is HHSC providing agencies with the rapid flu test?**

*Answer:* At this time, HHSC does not have plans to distribute rapid flu tests.
Agencies that choose to provide rapid flu testing are responsible for procuring their
own tests. Agencies that will not be providing rapid flu testing should direct clients
on where they can obtain a flu test. <added 02/03/22>

**Is a start-of-care an essential visit, or does an agency determine if start-
of-care is an essential visit? We have been completing documentation
packets by phone and have not secured any signatures for contracted
programs since the last week of March. What is HHSC’s licensing
expectations of these records without signatures?**

*Answer:* The agency determines whether start-of-care is an essential visit based on
the client’s needs. In absence of a signature, licensing surveyors will look for
documentation that the start-of-care information was shared with the client and
that there is an indication of the client’s understanding.
Please provide guidance on maintaining appropriate staffing and continuity of care for the clients for a PAS agency when a caregiver answers “yes” to any of the screening questions. Do you have any recommendations to mitigate this issue that keeps everyone safe while maintaining continuity of care?

Answer: This is one of the challenges presented by the COVID-19 pandemic. Agencies must develop strategies to ensure back-up services are available, reschedule services when they are deemed non-essential on the day of care, and educate clients on the realities of the pandemic and its effects.

COVID-19 Screening and Documentation

<updated 02/03/22> What should a HCSSA agency do if staff are exposed or exhibiting signs and symptoms of COVID-19?

Answer: The CDC has updated the work restrictions guidance for health care personnel. Due to the rapidly changing nature of the COVID-19 CDC guidance, agencies must review the Work Restrictions Guidance and Strategies to Mitigate Healthcare Personnel Staffing Shortages to determine the appropriate course of action for staff who are exposed or symptomatic. <updated 02/03/22>

What are the screening criteria?

Answer: The COVID-19 screening criteria are as follows:

1. The following COVID 19 symptoms and any additional signs and symptoms as outlined by the CDC in Symptoms of Coronavirus at cdc.gov:
   - fever (100.4 and above as measured with a thermometer);
   - chills;
   - cough, sore throat, shortness of breath, or difficulty breathing;
   - fatigue or muscle or body aches;
   - headache;
   - new loss of taste or smell;
   - congestion or runny nose;
   - nausea or vomiting; or
   - diarrhea.
2. Contact in the last 14 days, unless to provide critical assistance in a licensed facility or essential services through the HCSSA, with someone who has a confirmed diagnosis of COVID-19, is under investigation for COVID-19, or is ill with a respiratory illness.

<Updated 02/08/22> For additional information on symptoms, please visit the CDC’s Symptoms of COVID-19 webpage. <Updated 02/08/22>
What constitutes a positive screening? When someone meets only one criterion/symptom (such as a cough with no other symptoms) or when they meet multiple criteria?
Answer: Any single criterion that is met results in a positive screening. Please note that a screening needs to be based on any of the symptoms that are NEW to the person being screened. People can experience some of the listed symptoms on a regular basis. The screening should only identify NEWLY experienced symptoms, as in those within the last 48 hours.

What should an agency do if a client or client’s household member has a positive screening?
Answer: If a client or household member has a positive screening, staff conducting the home visit must take transmission-based precautions, such as wearing appropriate PPE while providing essential services in the home.

Does an agency have to screen for all criteria? Can an agency just ask about signs and symptoms? Can temperature alone suffice as screening?
Answer: An agency’s screening must address all screening criteria every time a screening is performed. Each screening criterion must be asked of the individual being screened.

What is the purpose of screening?
Answer: The purpose of the screening and the timing of the screening is to prevent the potential spread of COVID-19 among staff and clients.

When does screening need to be done?
Answer: A staff member’s screening must be performed before making a home visit. A staff member who meets a screening criterion has the potential to infect clients with COVID-19 if the staff member provides services before being screened. For this reason, staff who meet one or more screening criteria are not allowed to make home visits.

Client and household member screenings must be performed before essential services are provided. If the client or household member meets a screening criterium, then staff must 1) take transmission-based precautions, such as wearing appropriate PPE while providing services and 2) ensure coordination of services for the client as necessary.
Do all HCSSA types have to conduct screening of staff, clients, and household members?

**Answer:** Yes. All HCSSA types must conduct screenings. These types are:
- Home health agencies, including therapy-only agencies;
- Hospice agencies (inpatient hospice screening requirements for visitors are addressed separately in emergency rule, [26 TAC 558.950](#)); and
- Personal assistance services agencies.

Can staff, clients, and household members self-screen?

**Answer:** Yes. A staff member who self-screens must document his/her self-screen. An agency staff must document a client’s or household member’s self-screen.

Can screenings be conducted over the phone?

**Answer:** For PAS-only agencies, if responses to all screening criteria can be obtained by phone then, yes, the screening can be conducted over the phone. If the client cannot report responses over the phone and doesn’t have a household member to assist with the phone screening, then the screening cannot be conducted by phone.

For a home health and hospice agency, which must document an actual temperature, the situation is more complicated. If the client can take his/her own temperature and report responses over the phone, then yes, a home health or hospice can conduct screenings by phone. Additionally, a household member can assist in the client’s screening by phone, such as taking the client’s temperature or asking the client the screening questions and conveying the response to the staff on the phone. If the client cannot take his/her own temperature and report responses over the phone (and doesn’t have a household member to assist with the screening), then the full screening cannot be conducted by phone. The home health or hospice agency can conduct part of the screening by phone but must finish the screening (such as taking the temperature) in person using appropriate PPE.

Are PAS agencies responsible for ensuring their staff have thermometers?

**Answer:** No. Use of a thermometer is the recommended method for determining a person’s temperature and whether a fever exists. However, a PAS agency, which is a non-medical service model, might not have thermometers available for staff to use to screen for fever. Although a thermometer is strongly recommended by DSHS and the CDC, a PAS agency can screen for all other symptoms when a thermometer is unavailable and can ask if the client and household members are “feeling feverish.”
Does a home health or hospice agency have to get a temperature reading from household members?
Answer: Yes. Screening for clients is the same as for household members.

Does a hospice or home health agency, including one that only provides therapy services, have to record an actual temperature when screening clients and household members?
Answer: Yes, but only for the client. The hospice or home health agency can record the household member’s temperature, but it is not required. The agency must obtain the temperature of all household members who are present and use the temperature reading to make transmission-based precaution decisions, such as wearing PPE or rescheduling the visit if appropriate PPE is not available.

Some clients are provided services by several agency staff members on the same day. Does each staff member providing services that day have to screen the client and household members before visiting?
Answer: To avoid the need for multiple client/household member screenings on the same day, an agency must implement coordinated screenings and exchange of information between staff providing services to the client that day. An agency must ensure all staff providing services to the client subsequent to the screening that day are aware of the screening results for the client and household members before providing services. An agency must have a policy related to the coordination and exchange of information among staff.

What if a household member refuses to participate in the screening process?
Answer: If a household member declines to be screened, then the agency should educate the household member about the reason for the screening and the efforts to keep the client and staff safe. The agency can also have the staff take transmission-based precautions based on existing risk factors (i.e., the services to be provided, the staff’s potential exposure to the household members, other screening criterion that is known to the staff) while providing only essential services.

How should we conduct a screening for a client who lives in a care facility? Do we call and get daily screening information from the facility?
Answer: Yes, that is an option. HHSC recommends an agency call the facility in advance of the visit. Since facilities are required to screen their residents each day, the agency should ask for the facility’s screening information for the client conducted that day. The agency should also ask if the facility has any active COVID cases. An agency can talk with facility staff about the outcome of the client’s screening ahead of the visit, then document the information provided by the facility. Agency staff should use pertinent screening information to determine the appropriate transmission-based precautions to take but must also follow all infection control protocols of the licensed facility, as required by emergency rule 26 TAC §558.960(c).

Does screening for the staff, client, and household members need to be documented every time it occurs?
Answer: Yes. Every required screening must be documented.

Can an agency document screening for both staff and client/household members on the same paper log? Or file the documentation in the same folder?
Answer: Yes, but the “same paper log” can include only one staff and one client and must clearly show:

- Which is the staff’s screening (including results of the screening);
- Which is the client’s screening (including results of the screening); and
- Which are the household members’ screenings (including results of the screening).

An agency can file the documentation in one folder or separate folders. Regardless of where an agency chooses to file the documentation, it must be retrievable if requested by a surveyor.

How should an agency document a household member’s screening? Some household members don’t want their names used.
Answer: Household members should have an identifier that is not their name. For instance, they can be identified by their relationship to the client (e.g., spouse, daughter, son#1, roommate#2).

When documenting a screening, does an agency have to record a “yes” or “no” response to each symptom and each screening question? Or can documentation be a narrative that the staff, client, or household member has “reported no to all screening questions” or, if a screening criterion was met, “reported no to all screening questions except (name of criterion that was met)”?

16
Documentation can be a narrative that the individual being screened “reported no to all screening questions” or, if a screening criterion was met, “reported no to all screening questions except *(name of criterion that was met)*.” A home health agency and a hospice would also need a temperature reading.

**Does documentation need an original signature?**
**Answer:** Only paper logs require an original signature of the staff who conducted or verified the screening.

**How can staff sign electronic documentation?**
**Answer:** Only paper logs require a signature of the screener. Electronic documentation should require a user’s authentication (such as a phone number or a username and password), which serves as name and signature.

**Does an agency have to use just one type of documentation or can multiple types of documentation be used?**
**Answer:** An agency can use multiple methods of documentation as long as it can retrieve the documentation when requested by a surveyor. Agencies can mix-and-match their documentation methods – some staff can use paper logs, other staff can document electronically such as by Robo-call, texts, or email.

**Provider Letter 20-35 says that paper logs must have specific information, such as time/date and name and signature of the screener. Does electronic documentation have to have the same elements?**
**Answer:** Generally, yes. Time and date are evidentiary requirements to show that the screening took place before the visit occurred. An electronic “time stamp” can provide the necessary date/time and the user’s authentication (such as a phone number or a username and password) serves as name and signature.

**Provide Letter 20-35 refers to a “report” containing screening documentation. What does it mean?**
**Answer:** An agency needs to provide the surveyor with the screening documentation requested, at least for the sample staff and clients. A surveyor can request that staff demonstrate an understanding of the procedures for screening. Also, a surveyor might ask an agency to show evidence that the agency’s documentation method complies with the agency’s policy.
Provider Letter 20-35 says the documentation requirements in the letter are effective July 22, 2020. What documentation was required before then?
Answer: For screenings conducted before July 22, 2020, HHSC will accept whatever documentation the agency has on record that was supported by the agency’s policy at the time. HHSC will not accept an absence of documentation based on an agency’s “no documentation” policy.

Provider Letter 20-35 says that screening documentation must be incorporated in the client’s record. The last webinar said it could be stored in a separate binder. We prefer to store the screening documentation in a separate binder. Is that okay?
Answer: An agency must file all screening documentation (staff/client/household member) in a manner that is retrievable when requested by HHSC and readily available to the agency’s QAPI committee and management. HHSC plans to revise the provider letter to clarify that an agency must maintain screening documentation in a manner that allows the agency to retrieve the documentation when requested by HHSC.

Is a COVID-19 screening required for a deployment of telemonitoring devices?
Answer: Yes, because the person installing the telemonitoring device will be entering the home of a client. The installer, the client, and the client’s household members must be screened. The agency must ensure appropriate action is taken if someone does not pass the screening. If the installation is in a facility, the installer must submit to the facility screening.

Would it be acceptable for us to add an item to our screening stating that the person being screened will need to report any new symptom not otherwise attributed to a known condition?
Answer: Yes. An agency can include additional screening criteria but must have policies and procedures related to any action the agency will take if the person being screened meets the additional criteria.

Does an agency’s client screening form have to be filed within 21 days, or can they be filed monthly with the attendant screening forms?
Answer: The timeframe for filing the screening documentation is at an interval set by the agency’s policy.
Our agency collects a screening form from every attendant/provider. Do we also have to collect one for every client and household member?  
**Answer:** Yes. Documentation for screening for clients and the client’s household members has been required of all HCSSAs since April. Elsewhere in this FAQ document, it explains that clients/household members can self-screen or agency staff can conduct their screenings.

Our agency has several employees who work entirely remotely and do not come in contact with any other office staff or any clients or family members. Do they have to be screened every workday?  
**Answer:** No.

The FAQ document says if an attendant meets just one screening criterion/symptom, then he or she can’t work. We have an attendant who gets a headache once or twice a month. Are you saying she shouldn’t be allowed to work if she has a headache? A person can have congestion, runny nose, nausea, vomiting, or diarrhea one day as a “new” symptom but it is gone by next day. Should that exclude them from working if they have no other symptoms?  
**Answer:** The purpose of screening is to prevent the spread of COVID-19. A HCSSA should do all it can to prevent the spread. A staff who experiences a single symptom that occurs semi-regularly can be allowed to work if the staff wears full PPE. A staff who experiences a single symptom that is new but can be explained (e.g., vomiting or diarrhea due to consuming excessive dairy) can be allowed to work if the staff follows the agency’s infection control protocols.

A staff who experiences one or more symptoms that are new and unexplainable must follow CDC guidelines for When to Quarantine, and agencies should review the CDC Guidance for Managing Healthcare Personnel with SARS-CoV-2 Infection or Exposure to SARS-CoV-2 for any applicable responses.

Are initials accepted for attendant daily screenings, or do they have to be actual signatures daily?  
**Answer:** Initials are not acceptable. Actual signatures are required.

Do office staff need to be screened daily as well?
Answer: Office staff need to be screened at the beginning of the workday if they will come to contact with home visit staff, potential clients, or family members of potential clients.

What do we do when some of our clients don’t complete the forms even though they are aware of the screening requirements?
Answer: The emergency rule does not require clients to complete forms. The rule requires an agency to screen its clients before a visit to provide essential services. If client declines to self-screen or document on an agency’s form, then agency staff must screen the client and document the screening.

Our agency uses the VESTA Mobile App for the attendant and client screenings. Is this appropriate?
Answer: Agencies that use mobile apps for staff screenings are responsible for determining whether the apps meet HHSC's requirements for screening and documentation.

Do paper logs have to have an original signature? Can we accept a faxed or emailed version of a paper log?
Answer: A paper log, which must have an original signature, can be faxed or scanned and emailed to the HCSSA office for filing.

If an agency sends its attendants a monthly paper log to document their self-screenings and the screenings of their clients and the clients’ household members – can there be one signature line for the screener for the whole month of screenings?
Answer: A screener’s signature on a paper log is necessary for each screening event. A screening event is:
- when the staff self-screens at the beginning of a work day
- when the staff screens the client and the client's household members before the first home visit for the day
- when the staff screens the client and the client's household members before the second home visit for the day

Are the attendants required to sign by every date they screen themselves?
Answer: Yes.

Can a PAS agency use a single screening form for the attendant to check off that she has screened herself, the client, and household members? The
client doesn’t like to sign the form daily. Or do we need separate forms for the attendant, the client, and each household member that the attendant will need to sign for each form on a daily basis?
Answer: If a single screening form is being used, then it must identify responses to screening questions for each person screened. There is no requirement that a client sign a screening form. The staff person conducting the screening or documenting the client/household members’ self-screenings must sign the screening form.

Our agency provides private duty nursing to a pediatric patient in a home with several siblings and foster children, most of whom are medically fragile and also receive nursing care through other home health agencies. What is the best way to conduct screenings of everyone in the home?
Answer - To avoid the need for multiple caregiver/client/household member screenings on the same day, the agencies involved should implement coordinated screenings and exchange information among all staff providing services to clients in the home that day. HHSC considers this to be part of each agency’s infection control policy related to “the prevention of the spread of infectious and communicable disease.” An agency must have a policy related to the coordination and exchange of information of its staff/client and the staff/clients of other agencies.

Information Letter 20-16, which was revised on November 2nd, still has international travel on it even though it was removed from the recent HCSSA emergency rule as a screening criterion. Should HCSSAs with an HHSC contract add that screening criterion back?
Answer – Information Letter 20-16 mentions international travel only in the context of a provider educating clients about the spread of COVID-19. It is not part of the screening criteria for staff, clients, and household members, and does not have to be added back. - Please note that an Information Letter (IL) is different from a Provider Letter (PL). ILs are communications about requirements for HHSC contractors. PLs are communications from Long-term Care Regulation relating to licensing.

How do we conduct screenings for clients and household members who are infants, toddlers, or cannot communicate due to developmental disabilities such as autism? What do you suggest as to how we can document this individually? We are currently using a narrative format based on the information from the parent.
Answer - When screening young children, it is appropriate to ask the parents to respond to the screening questions on behalf of their children. When screening someone who is developmentally disabled and unable to verbally communicate, the screener would conduct the screening in a manner that is appropriate to the individual’s ability, such as through written communication or a primary caregiver. Responses need to be documented the same as other screenings. A narrative format signed by a therapist also is adequate.

Can the agency leave the screening questions with household members and ask them to call the agency in advance of a scheduled visit if they answer yes to any of the questions? Or does the agency have to proactively ask each household member if they screened themselves on the day of the visit?

Answer – If clients/household members self-screen, the agency must document the self-screenings before each home visit. The self-screen prior to service delivery must indicate that all questions were addressed and not just those with a positive response. Documentation can be a narrative that the individual being screened “reported no to all screening questions,” or, if a screening criterion was met, “reported no to all screening questions except (name of criterion that was met).” A home health agency and a hospice would also need a temperature reading.

Hospice

Could a hospice agency amend its contract with a nursing facility (NF) so that the NF’s registered nurse (RN) would be responsible for meeting the needs of the hospice’s clients during an emergency?

Answer: Yes, contracts may be amended, but only:
- as appropriate to the needs of the hospice’s clients;
- if the NF is able and willing to take on the responsibility; and
- if the hospice and NF are able to coordinate care.

How many family members can be in the room with someone who is actively dying? Does the hospice or the facility make this policy? What about local ordinances?

Answer: An end-of-life situation does not negate required infection control practices, and emergency rule 26 TAC §558.960(c) requires hospice staff to follow the infection control protocols of a licensed facility. Of course, local ordinances must
take precedence. However, in the absence of a local ordinance that bans such indoor gatherings or explicitly identifies the number of people who can gather indoors. considerations would include, at a minimum:

- The capacity for social distancing in the space;
- Risks for the family members (age, medical conditions, whether they live together, etc.);
- Availability of PPE;
- The extent of infection control education provided to the staff and family members/visitors;
- Compliance with infection control precautions by family members/visitors; and
- The adequacy of facility and hospice infection control policies, procedures, and practices.

**Can a hospice discharge a client if the facility in which the resident resides won't let us in?**

**Answer:** Yes. The discharge should be discussed with the client, client’s family or legally authorized individual, and the client’s attending physician. Prior to discharge, the hospice should communicate with the facility to explain the nature of essential hospice services for the client. <added 02/03/22> Facilities must not deny access to hospice providers, and any attempt to do so must be reported to HHSC per Provider Letter 2021-33. <added 02/03/22>

**Infection Control Survey Tools**

**Do audit surveys focused on infection control apply to PAS-only agencies?**

**Answer:** Yes, in accordance with 26 TAC §558.285, all agencies must adopt and enforce infection control policies. Since a personal assistance services (PAS) agency does not provide clinical services, their policies will differ from those of a home health or hospice agency. HHSC has developed an Infection Control Probe Tool for PAS-only agencies to review the effectiveness of their infection control policies. Long Term Care Regulation survey staff will use these prompts to conduct infection control focused surveys. HHSC encourages all PAS agencies to use the tool to determine whether their infection control policies and procedures prevent and control the spread of communicable diseases such as COVID-19. Use of the tool is not required but is an important part of an agency's Quality Assessment and Performance Improvement (QAPI) process.

**Where can I find an infection control checklist for home health agencies like the one HHSC has for PAS-only agencies?**
**Answer:** There is no infection control probe tool specifically for home health agencies. CDC’s [Infection Control Assessment Tools](https://www.cdc.gov/infectioncontrol/tools.html) can be used for all agency categories to the extent applicable to its services and clientele. The CDC developed these tools to assist health departments in assessing infection prevention practices and to guide quality improvement activities (e.g., by addressing identified gaps). The tools also can be used to conduct internal quality improvement audits.

**When will HHSC start infection control surveys, and what is the impetus for such a survey?**

**Answer:** HHSC is currently conducting focused infection control surveys. The impetus for a focused infection control survey can be a complaint, a reported case of COVID-19, or as part of contact tracing in connection with a reported case.

**Inpatient Hospice**

**Is family allowed to visit inpatient hospice patients?**

**Answer:** Yes. Emergency rule 26 TAC §558.950 governing visitation at a hospice inpatient unit was adopted effective April 23, 2021. Please note that end-of-life visits continue to be permitted without separate approval or designation by HHSC for general visitation.

**If a patient with confirmed or suspected COVID-19 is being transferred to an in-patient hospice facility from another health care facility, does the transferring facility have to inform the in-patient hospice facility?**

**Answer:** Yes, the transferring facility must inform the in-patient hospice facility that the patient is suspected or known to have COVID-19. The hospice facility should explicitly confirm with the transferring facility whether the patient is suspected or known to have COVID-19 and take all appropriate precautions.

**Is there a checklist for COVID-19 for long-term care facilities that might be helpful to inpatient hospices?**

**Answer:** Yes. The CDC has issued guidance for preventing the spread of COVID-19 in long-term care facilities, which includes a preparedness checklist. See CDC guidance for Interim Infection Prevention and Control Recommendations to Prevent SARS-CoV-2 Spread in Nursing Homes.
How do HCSSAs get more personal protective equipment (PPE)?

Answer: Providers should first try to get PPE through their normal supply chain or through other available resources. Some resources are sister facilities, local partners or stakeholders, Public Health Region, Healthcare Coalition, or Regional Advisory Councils.

If an agency cannot get PPE from vendor(s) and have exhausted all other options, they should contact the Regional Advisory Council for their service area. Additionally, the Texas Division of Emergency Management (TDEM) can assist. An agency can request PPE through TDEM’s STAR program. The State of Texas Assistance Request (STAR) User Guide provides instructions for submitting a request.

How can an agency calculate how much PPE it will need?

Answer: The CDC has two types of “calculators” to estimate how many days a PPE supply will last given current inventory levels and PPE use rate.

The first “calculator” is the PPE Burn Rate Excel Spreadsheet [3 sheets]. To use the calculator, enter the number of full boxes of each type of PPE in stock (gowns, gloves, surgical masks, respirators, and face shields, for example) and the total number of HCSSA clients. The tool will calculate the average consumption rate, also referred to as a “burn rate,” for each type of PPE entered in the spreadsheet. This information can then be used to estimate how long the remaining supply of PPE will last, based on the average consumption rate. Using the calculator can help HCSSAs make order projections for future needs.

The second “calculator” is the National Institute for Occupational Safety and Health (NIOSH) phone app (NIOSH PPE Tracker). Based on the Excel spreadsheet model, the app features several improvements, including an easy-to-use interface and the ability to add restock. The app is available for both iOS and Android devices.

Our HCSSA received only a portion of the PPE it ordered through a State of Texas Assistance Request (STAR). Can we re-request PPE from STAR?

Answer: Yes, an agency should re-request PPE if necessary. The State of Texas Assistance Request (STAR) User Guide provides instructions for submitting a request.
How much PPE should an agency have on hand when a surge outbreak occurs?
Answer: HHCS recommends an agency maintain at least a two-week supply of PPE at all times. Shortages of PPE can happen at any time, so agencies should be mindful to conserve supplies when possible.

Is an agency required to provide PPE to its contract staff since they are supposed to use their own supplies?
Answer: An agency that uses independent contractors or arranged services must do so in accordance with 26 TAC, §558.289 (Independent Contractors and Arranged Services). Further, the contract should address which entity has responsibility for providing PPE. Regardless of any contractual obligations, the licensed agency is ultimately responsible for ensuring appropriate PPE is provided to staff delivering services to the agency’s clients and that staff use appropriate PPE when delivering services to the agency’s clients.

Is an agency required to hand deliver PPE to attendants, or can an agency just inform its attendants that PPE is available at the office?
Answer: An agency can decide what works best for the agency and its clients. However, a licensed agency is ultimately responsible for ensuring appropriate PPE is provided to staff delivering services to the agency’s clients and that staff use appropriate PPE when delivering services to the agency’s clients.

Does HHSC have specific requirements or specifications for disposable face masks?
Answer: Disposable surgical masks (or procedure masks) used by HCSSAs while providing services must be approved by the U.S. Food and Drug Administration (FDA). The FDA regulates face masks as medical devices when they are marketed for medical purposes. Medical purposes include uses related to COVID-19, such as face masks to help stop the spread of disease, surgical masks, and surgical masks with antimicrobial/antiviral agents. The FDA website provides additional information.

Personal Protective Equipment - Use

Can an agency require vaccines and masks under the Governor’s order GA-38?
Answer: A HCSSA can require its staff to routinely wear masks and to be vaccinated as a condition of employment. A requirement for vaccination should be discussed
with a HCSSA agency’s legal counsel and human resource professionals. LTC facilities may also require HCSSA personnel entering the building to wear increased PPE. A HCSSA agency can enter into an agreement with an LTC that requires HCCSA staff providing services in the building to be vaccinated; however, that is not a requirement in rule.

**Can agency staff use a cloth face covering instead of a surgical or procedure mask?**

**Answer:** The CDC states that cloth face coverings are not personal protective equipment (PPE). Masks or facemasks (surgical masks and N95 respirators) are commercially made PPE intended for use by health care workers. Face coverings can be handmade or commercially-made, but they are not sterile and are not intended for use by health care workers.

**What do you mean by full PPE?**

**Answer:** Full PPE means gloves, gown, and face shield or goggles and an <updated 02/03/22> NIOSH-approved N95 or equivalent higher-level respirator <updated 02/03/22>.

**When should staff wear full PPE?**

**Answer:** Staff should wear full PPE when a client or a household member has <updated 02/03/22> suspected or confirmed COVID-19. Healthcare personnel should review the CDC guidance Interim Infection Prevention and Control Recommendations for Healthcare Personnel During the Coronavirus Disease 2019 (COVID-19) Pandemic. <updated 02/03/22>

**Does HHSC have any guidance for PAS agencies with respect to their unlicensed staff wearing full PPE when they are not trained to don and doff PPE appropriately?**

**Answer:** If unlicensed staff at a PAS agency need to use full PPE, the PAS agency must ensure staff are trained in how to put on and take off PPE properly. The CDC has information about:

- how to don and doff PPE to minimize infection transmission (see [https://www.cdc.gov/coronavirus/2019-ncov/hcp/using-ppe.html](https://www.cdc.gov/coronavirus/2019-ncov/hcp/using-ppe.html)); and
- the sequence for donning and doffing PPE (see [https://www.cdc.gov/hai/pdfs/ppe/ppe-sequence.pdf](https://www.cdc.gov/hai/pdfs/ppe/ppe-sequence.pdf)).

**Does an agency have to provide full PPE (mask, gloves, gown, face shield/goggles) to staff?**
**Answer:** Yes, when necessary. If a client has COVID-19 or is suspected of having COVID-19, the HCSSA should provide staff with full PPE to wear, including an [updated 02/03/22] NIOSH-approved N95 or equivalent higher-level respirator [02/03/22], when providing essential services. Otherwise, the agency must determine which PPE is appropriate for the staff to use depending on the risk factors, such as how many screening criteria the client/household members have met and the nature of the services being provided. If a gown is indicated, then a gown should be provided by the agency and worn by the staff.

**How often should an agency provide PPE to its staff?**

**Answer:** An agency is responsible for ensuring its staff have the necessary PPE to meet transmission-based precautions for COVID-19 at frequencies necessary to deliver services as identified in the care plan, plan of services, or individualized service plan. A client’s essential services cannot be adversely affected due to an agency’s failure to provide staff with necessary PPE in a timely manner.

**Does an agency have to conduct visits if PPE is necessary, but none is available?**

**Answer:** No. In situations where a client or household member has failed a COVID screening, HCSSA staff are not required to conduct visits without PPE when it is unavailable. Essential visits that are not conducted must be documented along with justification for the visit not occurring. Also, the client’s attending physician must be notified of the missed visit. The agency should assist the client in transferring to another agency that can provide services. Please see [PPE Supplies](#) in these FAQs for information about obtaining PPE.

**Can an agency reuse PPE?**

**Answer:** [updated 02/03/22] The CDC updated its guidance for [Implementing Filtering Facepiece Respirator Reuse](#) when there are known shortages. The CDC recommends, “Healthcare facilities should stop purchasing non-NIOSH approved respirators for use as respiratory protection and consider using any that have been stored for source control where respiratory protection is not needed. Respirators that were previously used and decontaminated should not be stored.” The Strategies for Optimizing the Supply of N95s were written to follow an ordered plan that includes strategies for conventional (everyday practice), contingency (expected shortages), and crisis (known shortages). When the availability of N95s becomes limited due to an expected shortage, supplies first should be conserved using contingency strategies. [updated 02/03/22]
Why do staff have to dispose of a PPE gown after exiting a home? Why can’t that gown be used again for that client only?  
**Answer:** Since gowns are worn for positive cases of COVID-19, as well as suspected cases, the reuse of a gown for the same client increases the risk to the staff person who must handle the gown multiple times. The risk of infection for the staff person also increases the risk for other clients the staff visits because the staff might become an asymptomatic carrier of the virus.

Can an agency throw out PPE used to treat a COVID-19 positive client like regular trash or should it be disposed as biohazard waste?  
**Answer:** PPE used to treat a COVID-19 positive client does not need to be disposed as biohazard waste. It can be thrown away like regular trash. However, HHSC recommends that all used PPE be handled carefully and staff that touch used PPE practice hand hygiene protocols.

We are unable to obtain fit test kits for N95 respirators, should we use them anyway?  
**Answer:** Yes, but HHSC recommends that a face shield be used over the N95 respirator.

Do HCSSAs have to provide PPE to their clients?  
**Answer:** If requested and needed by the client for the type of services being provided, a HCSSA must *ensure the client has* appropriate PPE to use while receiving HCSSA services. Note that the purpose of using PPE is to prevent infection, and this is the HCSSA’s responsibility. A HCSSA staff member should discuss with the client the infection control risk factors that are present during scheduled visits. This may include ongoing or repeated education to the client to discuss risk and procedures. If close contact between staff and a client is necessary, then the staff member must ask whether the client has a well-fitting, cloth face mask to use. If the client doesn’t have a proper cloth face mask, then the staff must ensure a surgical mask is available for the client to use during the visit. A HCSSA is not obligated to provide PPE to clients to use when the client is not receiving services.

Additionally, HCSSAs are required to include in a client’s care plan, plan of care, or individualized service plan the supplies and equipment necessary when providing services. Supplies include PPE; therefore, the client’s plan must identify the types of PPE to be used by staff and the client during HCSSA visits. For home health
agencies, see 26 TAC §558.401(b); for hospice agencies see 26 TAC §558.821(d); for PAS agencies see 26 TAC §558.404(f).

Double masking seems to be a new thing. What is it, and is it really effective?
Answer: The CDC’s Improve How Your Mask Protects You provides tips on improving the effectiveness of masks. HCSSAs are encouraged to follow the guidance, which includes:
- Ensuring that masks fit snugly over mouth, nose, and chin;
- Knotting and tucking surgical mask for a snug fit https://youtu.be/UANi8Cc71A0; and
- Wearing a multi-layer cloth face covering over a surgical mask (A fresh cloth mask and a fresh surgical mask is needed for each home visit.).

A study accessible on the CDC’s website found that:
- An unknotted surgical mask alone blocked 56.1% of the particles from a simulated cough;
- A knotted and tucked surgical mask alone blocked 77.0% of the cough particles; and
- The combination of the cloth face covering the surgical mask (double mask) blocked 85.4% of the cough particles.

Reporting COVID-19 Cases

Why do HCSSAs have to report COVID-19 cases to the local health entity?
Answer: State statute (Texas Health and Safety Code, §81.042(e)(4)) and HCSSA licensing standards (26 TAC, §558.285(1)(A)) require HCSSAs to report communicable diseases to their local health entity or DSHS.

Do HCSSAs have to report both client and staff COVID-19 cases?
Answer: Yes. Please note that a HCSSA must report a client’s COVID-19 case when the HCSSA has provided services to the client within the previous 14 days. A HCSSA is not required to report a client’s COVID-19 case if the HCSSA has not provided services to the client within the last 14 days.

If an agency client tests positive for COVID-19 while in a hospital emergency room and is then admitted to the hospital for treatment, does the agency have to report the positive case to the local health entity?
Answer: This depends. The agency must report the positive case to the local health entity if the agency provided services to the client within 14 days before the client was admitted to the hospital.

How does an agency with multiple branch offices in a large service area report cases of COVID? Can our corporate office just report all cases to DSHS?
Answer: When reporting confirmed COVID-19 cases to the local health entity, it is important to report in the county of residence or location for the client or individual. This enables accurate epidemiological data for hot spots, needed resources, case counts, etc.

Many providers have tried to report their COVID-19 clients to their local health entities without success. The local health entities are refusing to take their information. Other than documenting their attempts, what else does HHSC recommend?
Answer: If a HCSSA is unable to report to the local health entity, a required report must be made to the DSHS regional office. See the listing of local health entities by county at Coronavirus Disease 2019 (COVID-19) Local Health Entities. See the listing of DSHS Regional Offices at Public Health Regions.

If a hospice agency is providing care in a long-term care facility to a client who contracts COVID-19, are both the hospice agency and the facility required to report the COVID-19 positive case to the local health entity or regional office of DSHS?
Answer: Yes.

Is there a report that must be completed when an agency reports a COVID-19 client/attendant infection to the local health department? What information must be submitted to the local health department?
Answer: There is no specific reporting form or format that is required when reporting to local health entities. Some counties might have specific requirements and prescribed forms that they request when reporting, and agencies will have to comply with those requirements. There are links, along with phone numbers, for local health entities and regional DSHS offices in the FAQ document. Additionally, HHSC can require an agency to provide data related to COVID-19 cases.

What date was the reporting of COVID-19 infected clients or employees required to be reported to the local health entity?
Answer: HCSSAs were required to report client and staff COVID-19 cases to their local health entities starting at the end of March 2020.

Return to Work

When can an agency staff return to work after being diagnosed with COVID-19?
Answer: The CDC has provided guidance for Return to Work Criteria for HCP with Confirmed or Suspected COVID-19 Infection. <updated 02/03/22>Due to the rapidly changing nature of the CDC’s return to work, quarantine, and isolation guidelines, facilities must visit the CDC’s website and review the guidance to select which return to work situation is applicable. <updated 02/03/22>

Does an agency staff need a medical release to return to work?
Answer: The agency’s own policy would govern requirements for a medical release.

Please provide guidance for return to work time frames in situations where there is not a clear difference between staff having the flu or COVID-19.
Answer: The CDC provides information on the similarities and differences between flu symptoms and COVID-19 symptoms. Testing is the only sure way to determine if someone has the flu or COVID-19. An agency should follow its testing strategy if it has one. Otherwise, since the duration of the flu is generally shorter than COVID-19, CDC guidance for returning to work is acceptable guidance when it is not known whether a health care professional has the flu or COVID-19.

Visits via Telecommunications

Can an agency conduct initial visits via telehealth and telemedicine?
Answer: Yes, but an agency must determine whether the use of telehealth or telemedicine for the initial visit would be appropriate on a case-by-case basis, according to the client’s needs and circumstances and the agency’s policies and procedures. An agency may use telehealth and telecommunications to provide planned essential care and services when appropriate to the plan of care or care plan.

Can supervisory visits be conducted by phone or video conferencing?
**Answer:** Yes. Supervisory visits determined to be non-essential can be conducted via phone or video conferencing.

**What if our clients are asking for a postponement of their visits? Can we do telecommunication visits?**
*Answer:* Yes, the client always has the option to refuse a visit or request postponement. *<added 02/03/22>* Telecommunication visits are an option depending on the type and purpose of the visit; however, if a visit is postponed, an agency must document a client’s refusal or postponement request and make the physician ordering the health care services aware that the client did not get the services that were ordered for overall coordination of care. *<added 02/03/22>*

**Can orientation for unlicensed staff be conducted via telephone?**
*Answer:* This is permissible, but the agency must determine whether the orientation is appropriate to be conducted by telephone or whether video communication is needed, so that demonstration of an assigned task can be seen. An agency will need to document that the call/communication took place (date, time, length of call) and what was covered during the call. This information needs to be in the HCSSA’s staffing records to show what was done, what was discussed, and what orientation was provided according to the tasks that the staff would perform.

**How long are we allowed to do telecommunication in place of in-person visits?**
*Answer:* That is unknown as this time. HHSC will keep HCSSAs informed of waivers and exceptions through required rule-related notifications in the Texas Register, GovDelivery announcements, provider letters, and HCSSA home page postings.

**Can we use electronic signatures, or just not get signatures for initial visits and assessments?**
*Answer:* For any documentation requiring a signature, an electronic signature is acceptable as long as it contains adequate security and authentication measures to reliably identify the signer and securely transmit the signature. For documentation relating to an initial visit and assessment that does not require signature, documentation of required components and indication of the client’s understanding is sufficient.

**Our agency is having difficulty meeting our frequency of visits as outlined in the plan of care, care plan, or individualized service plan. How should we handle this?**
Answer: If you are unable to meet the frequency of visits outlined in the plan, update the plan and then document why you are unable to meet its requirements at this time. Be sure to let the client/family/caregiver know of the change and why.

Is an agency able to extend the date of a supervisory visit if the client is quarantined due to COVID19?
Answer: Yes, the date of supervisory visit can be extended.

Resources

Where should HCSSAs go for COVID-19 information?
Answer: Reliable sources of information include:

- The Centers for Disease Control and Prevention
- The Centers for Medicare and Medicaid Services
- The Texas Department of State Health Services
- The Health and Human Services Commission

How do I get in touch with the Department of State Health Services (DSHS)?
Answer: The following are ways to access DSHS information and staff:

- DSHS website: https://www.dshs.state.tx.us/coronavirus/
- DSHS Contact Information: If you have any questions or would like more information about COVID-19, contact DSHS by email or by phone 24/7:
  - Email: coronavirus@dshs.texas.gov
  - Phone: Dial 2-1-1, then choose Option 6. If you experience difficulty when dialing 2-1-1, please email at address above.
- See the listing of local health entities by county at Coronavirus Disease 2019 (COVID-19) Local Health Entities.
- See the listing of DSHS Regional Offices at Public Health Regions.

Does DSHS have guidance for public home health service providers?
Answer: Yes. On the DSHS Coronavirus: Information for Hospitals and Healthcare Professional webpage is a link for the updated home health service providers in English and Spanish under “Infection Control.”

Are recordings of the HHSC HCSSA webinars on the HHSC website?
Answer: Yes, recorded webinars are available on the HHSC website on the HCSSA home page.
How can a HCSSA determine if a particular disinfectant product will actually kill the COVID-19 virus?

Answer: List N on the Environmental Protection Agency’s website contains disinfectants for use against COVID-19. An agency can search the list by entering the product’s EPA registration number, which is found on the product’s label.

There are so many hand sanitizers available. Are they all safe and effective?

Answer: No. The Food and Drug Administration (FDA) has posted updates on hand sanitizers consumers should not use.

Does HHSC have any guidance on the use of UV-C lights for disinfecting purposes?

Answer: HHSC recommends following CDC guidance for Cleaning and Disinfection Your Facility under Alternative Disinfection Methods. That guidance recommends the use of only List N surface disinfectants, and it states, with respect to alternative disinfection methods, such as UV-C lights:

The efficacy of alternative disinfection methods, such as ultrasonic waves, high intensity UV radiation, and LED blue light against COVID-19 virus is not known. EPA does not routinely review the safety or efficacy of pesticidal devices, such as UV lights, LED lights, or ultrasonic devices. Therefore, EPA cannot confirm whether, or under what circumstances, such products might be effective against the spread of COVID-19. CDC only recommends use of the surface disinfectants identified on List N against the virus that causes COVID-19.

Resources related to PPE:

For N95 respirator and fit-testing information and resources: Occupational Safety and Health Administration Respiratory Protection eTool

The CDC also has specific information relating to:

- Strategies to Optimize PPE and Equipment
- Strategies to Optimize Eye Protection
- Strategies to Optimize Isolation Gowns
- Strategies to Optimize Face Masks
- Strategies to Optimize N-95 Respirators
Information about facemasks and respirators is available at COVID-19: Facemasks and Respirators Questions and Answers and can be shared with family members and caregivers.
